HANDBOOK OF TRANSPORT MODELLING

Edited by

DAVID A. HENSHER
Institute of Transport Studies,
University of Sydney

KENNETH J. BUTTON
The School of Public Policy,
George Mason University

PERGAMON
An Imprint of Elsevier Science
Amsterdam – Lausanne – New York – Oxford – Shannon – Singapore – Tokyo

CONTENTS

Introduction to the Series v

Chapter 1

Introduction
DAVID A. HENSHER and KENNETH J. BUTTON 1

1. Introduction 1
2. Transport modelling 2
3. What is a good model? 3
4. Where is transport modelling moving? 5
5. The changing policy agenda 7
6. The Handbook 9

Chapter 2

History of Demand Modelling
JOHN BATES 11

1. Introduction 11
2. Supply and demand 12
3. Aspects of demand 14
4. The four-stage model 17
   - 4.1. Assignment 18
   - 4.2. Concluding remarks 20
5. Models of trip production 20
   - 5.1. Car ownership 23
   - 5.2. Models of trip attraction 25
6. Models of distribution or destination choice 26
   - 6.1. Forecasting the future distribution 29
7. Models of mode choice 29
8. Overall model structure 31

References 32

Chapter 3

The Four-step Model
MICHAEL G. McNALLY 35

1. Introduction 35
2. Transportation systems analysis 36

3. Problems, study areas, models, and data 37
3.1. Study area definition 38
3.2. Models 38
3.3. Data 40
3.4. A sample problem 41
4. Trip generation 42
4.1. Process 42
4.2. A sample household-trip-production model 44
4.3. A sample zonal-attraction model 45
4.4. Application to the base population 45
4.5. Time of day 45
5. Trip distribution 46
5.1. Process 46
5.2. Travel impedance and skim trees 47
5.3. A sample gravity model 47
5.4. Adjustments 48
6. Mode choice 48
7. Route choice 49
7.1. Process 50
7.2. A sample assignment of vehicle trip tables to the highway network 50
8. Summary 51
References 52

Chapter 4

The Activity-based Approach
MICHAEL G. McNALLY 53

1. Introduction 53
2. The trip-based approach 54
2.1. The four-step model 54
2.2. Limitations 55
3. The activity-based approach 56
3.1. Characteristics of the activity-based approach 58
3.2. Theory and conceptual frameworks 59
4. Data 60
5. Applications of activity-based approaches 61
5.1. Simulation-based applications 61
5.2. Econometric-based applications 63
5.3. Other applications 64
6. Summary and future directions 65
6.1. Current modeling needs 65
6.2. Data needs 66

6.3. Policy applications 66
6.4. Where we are and where we are going 67
References 68

Chapter 5

Flexible Model Structures for Discrete Choice Analysis
CHANDRA R. BHAT 71

1. Introduction 71
2. Heteroscedastic models 73
   2.1. Model formulations 73
   2.2. HEV model structure 74
   2.3. HEV model estimation 76
   2.4. Transport applications 77
3. Flexible structure models 78
   3.1. Model formulations 79
   3.2. MMNL structure 81
   3.3. MMNL estimation methodology 83
   3.4. Transport applications 87
4. Conclusions 88

References 89

Chapter 6

Duration Modeling
CHANDRA R. BHAT 91

1. Introduction 91
2. The hazard function and its distribution 94
   2.1. Parametric hazard 95
   2.2. Nonparametric hazard 96
3. Effect of external covariates 97
   3.1. The proportional hazard form 97
   3.2. The accelerated lifetime form 99
   3.3. General form 100
4. Unobserved heterogeneity 100
5. Model estimation 101
   5.1. Parametric hazard distribution 101
   5.2. Nonparametric hazard distribution 102
6. Miscellaneous other topics 106
   6.1. Left censoring 106
   6.2. Time-varying covariates 106
   6.3. Multiple spells 106
   6.4. Multiple-duration processes 107

6.5. Simultaneous-duration processes 108
7. Conclusions and transport applications 108
References 110

Chapter 7

Longitudinal Methods
RYUICHI KITAMURA 113

1. Introduction 113
2. Panel surveys as a means of collecting longitudinal data 113
3. Cross-sectional vs. longitudinal analyses 114
4. Travel behavior dynamics 116
5. Stochastic processes 118
   5.1. Renewal processes 118
   5.2. Markov renewal processes 119
   5.3. Markov processes 119
   5.4. Markov chains 120
6. Discrete time panel data and analyses 121
   6.1. Linear models 122
   6.2. Distributed-lag models 123
   6.3. Lagged dependent variables 123
   6.4. Non-linear models 125
   6.5. Dynamic models 125
   6.6. Initial conditions 126
   6.7. State dependence vs. heterogeneity 126
7. Issues in panel survey design 127
8. Conclusion 128

References 128

Chapter 8

Stated-preference Methods
JORDAN LOUVIERE and DEBORAH STREET 131

1. Introduction 131
2. Random utility based SP methods 132
3. Choice experiment designs consistent with RUT 136
4. Statistical properties of choice experiments 137
   4.1. Paired comparisons 137
   4.2. Multiple comparisons (choices) 138

References 142

Chapter 9

Towards a Land-use and Transport Interaction Framework
FRANCISCO J. MARTÍNEZ 145

1. Introduction 145
2. Model structure 147
3. The land-use model 149
   3.1. The bid–choice location framework 150
   3.2. The stochastic location model 153
   3.3. The land-use model 154
4. Measuring access 155
   4.1. Application example 157
5. Transport impacts on land use 160
6. Lessons for economic appraisal 161
7. Concluding remarks 162
References 163

Chapter 10

Travel Networks
LUIS G. WILLUMSEN 165

1. Introduction 165
   1.1. Flows and capacity 167
2. Notation 168
3. Assignment methods 169
   3.1. Route choice 170
   3.2. Steps in traffic assignment 171
   3.3. Tree building 171
   3.4. All-or-nothing assignment 173
   3.5. Stochastic methods 173
   3.6. Simulation-based methods 173
4. Congested assignment 174
   4.1. Wardrop's equilibrium 174
   4.2. A mathematical programming approach 176
   4.3. Solution methods 177
5. Limitations of classic methods 178
6. Generalized networks 179
   6.1. Common passenger services 179
   6.2. Freight 180
References 180

Chapter 11

Analytical Dynamic Traffic Assignment Models
TERRY L. FRIESZ and DAVID BERNSTEIN 181

1. Introduction 181
2. What is dynamic traffic assignment? 182

3. Dynamic network loading and dynamic traffic assignment 183
3.1. Notation 183
4. Dynamics based on arc exit-flow functions 183
5. Dynamics with controlled entrance and exit flows 185
6. Cell transmission dynamics 187
7. Dynamics based on arc exit-time functions 188
8. Dynamic user equilibrium 191
9. Tatonnement and projective dynamics 193
References 194

Chapter 12

Transport Demand Elasticities
TAE HOON OUM and W. G. WATERS II 197

1. Concepts and interpretation of demand elasticities 197
1.1. Ordinary and compensated elasticities 197
1.2. Other elasticity concepts 198
1.3. Mode-choice elasticities 201
1.4. Disaggregate discrete-choice models 202
1.5. Linkages between concepts of elasticities 203
2. Estimates of price elasticities 204
3. Some guidelines and pitfalls in estimating transport demand elasticities 206
3.1. The importance of market-specific demand studies 206
3.2. Types of transport demand elasticity studies 206
3.3. Specification of demand functions 207
3.4. Interpretation of elasticities 208
4. Concluding remarks 209
References 209

Chapter 13

Closed-form Discrete-choice Models
FRANK S. KOPPELMAN and VANEET SETHI 211

1. Introduction 211
2. Multinomial logit model 212
2.1. Independence of errors across alternatives 213
2.2. Equality of error variance across cases 213
3. Relaxation of the independence of errors across alternatives 214
3.1. The nested logit model 214
3.2. Generalized extreme value models 216
3.3. Universal (mother) logit models 221
3.4. Overview of models that relax the independence of errors over alternatives 222

4. Relaxation of the equality of errors over cases 223
5. Future developments in closed-form choice models 224
References 225

Chapter 14

Survey and sampling strategies
Peter R. Stopher 229

1. Introduction 229
2. Survey methods 231
   2.1. Household travel surveys 232
   2.2. Other non-household-based surveys 235
3. Sampling strategies 239
   3.1. Sampling frames 240
   3.2. Error and bias 240
   3.3. Sampling methods 241
4. The future 249

References 250

Chapter 15

Geographical Information Systems for Transport
KENNETH J. DUEKER and TU TON 253

1. Introduction 253
2. GIS basics 254
   2.1. Definition of GIS 254
   2.2. Four key functions of GIS 255
   2.3. Special requirements of GIS for transport applications 257
3. A framework for GIS-T 258
4. Two illustrative examples of GIS-T 261
   4.1. Evolution of GIS to support comprehensive urban land use and transportation planning 261
   4.2. The development of digital road map databases for vehicle navigation 265
5. Conclusion 268

References 268

Chapter 16

Definition of Movement and Activity for Transport Modeling
KLAUS W. AXHAUSEN 271

1. Introduction 271
2. Types of data 272
3. Defining movement and activity 273
4. Typical items and problems of aggregation 276

5. Defining the survey object 279
6. Translating the definitions into surveys 281
7. Freight and commercial traffic 282
8. Summary 283
References 283

Chapter 17

Environmental Valuation
RHONDA DANIELS and VIC ADAMOWICZ 285

1. Introduction 285
   1.1. Values 286
   1.2. Range of environmental impacts of transport 286
   1.3. Modeling environmental values: the linkage to biophysical models 288
   1.4. Models: transport and environmental links 290
2. Modeling approaches 290
   2.1. Weak behavioral linkage methods 290
   2.2. Revealed-preference approaches 291
   2.3. Stated-preference approaches 292
   2.4. Combining data sources 294
3. Case study: recreation site choice model 295
4. Valuation issues and future developments 297
   4.1. Valuation issues 297
   4.2. Future developments 299
5. Summary 300
References 301

Chapter 18

Allocation and Valuation of Travel-time Savings
SERGIO R. JARA-DÍAZ 303

1. Introduction 303
2. Time allocation theory and the subjective value of time 304
3. Discrete travel choice and the value of time 309
4. Towards social values 312
5. Synthesis and conclusion 314
Appendix 316
References 318

Chapter 19

Cost Functions in Transport
ERIC PELS and PIET RIETVELD 321

1. Introduction 321
2. Estimation of cost functions 324

2.1. Accounting cost functions 324
2.2. Statistical estimation of cost functions 325
2.3. Returns to scale 328
2.4. Productivity and technological change 329
2.5. Extensions 329
3. Applications 330
4. Conclusion 332
References 333

Chapter 20

Productivity Measurement
W.G. WATERS II 335

1. Introduction 335
2. Concepts of productivity gains 336
3. Index number procedures for productivity measurement 337
3.1. Partial factor productivity and performance ratios 338
3.2. Total factor productivity 338
3.3. Decomposition of TFP into sources 344
4. Conventional econometric methods 345
5. Concluding remarks 348
References 350

Chapter 21

Congestion Modeling
ROBIN LINDSEY and ERIK VERHOEF 353

1. Introduction 353
2. Time-independent models 354
3. Time-dependent models 358
4. Modeling congestion on a network 366
5. Road pricing and investment 368
6. Conclusions 371
References 372

Chapter 22

Modeling Signalized and Unsignalized Junctions
ROD TROUTBECK 375

1. Introduction 375
2. Definition of capacity and delay 375
3. Unsignalized junctions 376
3.1. Stream rankings 376
3.2. Availability of opportunities 376
3.3. The order of opportunities 377

3.4. The usefulness of opportunities to the entering drivers 378
3.5. The relative priority of traffic at the junction 379
3.6. The capacity of simple merges with absolute priority 379
3.7. The capacity of a limited priority merge and a roundabout entry 380
3.8. The estimation of delays at simple merges with absolute priority 381
3.9. Estimation of delay using M/M/1 queuing theory 382
3.10. Delays under oversaturated conditions 383
3.11. Queue lengths at simple merges 384
3.12. Analysis of junctions with a number of streams 385
3.13. Queueing across a median 386
4. Signalized junctions 386
4.1. Effective red and green periods 386
4.2. The definition of delays at a signalized junction 387
4.3. Delay models for undersaturated conditions 388
4.4. Time-dependent delay estimates 389
4.5. Modeling of turns through oncoming traffic at signalized junctions 390
References 390

Chapter 23

Trip Timing
HANI S. MAHMASSANI 393

1. Introduction 393
2. Trip timing for the work commute under equilibrium conditions 395
3. Prediction of within-day equilibrium departure patterns 397
4. Day-to-day dynamics 398
4.1. Daily variability of trip-timing decisions of commuters in actual systems 399
4.2. Behavioral mechanisms and decision-process models 401
4.3. Day-to-day forecasting frameworks 403
5. Concluding comments 404
References 405

Chapter 24

Modeling Parking
WILLIAM YOUNG 409

1. Introduction 409
2. Hierarchy of models 409
3. Model types 412
3.1. Parking-design models 412
3.2. Parking-allocation models 414

3.3. Parking-search models 416
3.4. Parking-choice models 417
3.5. Parking interaction models 419
4. Conclusions 419
References 420

Chapter 25

National Models
ANDREW DALY 421

1. Introduction 421
2. European national models 1975–1995 423
2.1. The regional highways traffic model, England 423
2.2. The Netherlands national model 424
2.3. Norwegian national model 426
2.4. Italian national model 427
2.5. Danish and Swedish national models 428
2.6. Other European national models 429
2.7. Proposed model of Great Britain 429
3. Model design: Similarities and differences 430
4. Discussion and conclusions 431
References 432

Chapter 26

An Introduction to the Valuation of Travel-time Savings and Losses
HUGH F. GUNN 433

1. Introduction 433
2. Conceptual models of time–cost trading 434
2.1. A simple behavioral model 434
2.2. More elaborate models of rational behavior 435
3. Experimental data: Situations and evidence of preference 437
3.1. Situations 438
3.2. Indications of relative attractiveness 439
4. The history of VTTS measurement 439
4.1. A pencil-and-paper approach 440
4.2. Probabilistic choice models 442
4.3. Regression approaches with transfer-price data 442
5. Current findings 443
5.1. Personal travel 443
5.2. Business travel and freight 444
6. Recent results and conclusions 445
References 447

Chapter 27

Can Telecommunications Help Solve Transportation Problems?
ILAN SALOMON 449

1. Introduction 449
   1.1. Background 450
   1.2. ICT applications 451
2. Do ICT affect the demand for travel? The main issues 454
   2.1. A typology of interactions 455
   2.2. Uncertainty about technology and behavior 456
   2.3. The time factor 456
   2.4. Do we need a new research paradigm? 457
3. Research approaches (and some pitfalls) 457
4. Conclusions and policy implications 461

References 461

Chapter 28

Automobile Demand and Type Choice
DAVID S. BUNCH 463

1. Introduction 463
2. Determinants of automobile demand 464
3. Auto-ownership models 466
4. Vehicle-purchase models 468
   4.1. Three MNL new car purchase models 469
   4.2. Nested MNLs of vehicle purchase 471
   4.3. Mixed MNL and revealed preference/stated preference joint estimation 471
5. Vehicle-holdings and usage models 472
   5.1. Discrete–continuous NMNLs 473
   5.2. Examples from the literature 475
6. Vehicle-transaction models 476
7. Conclusions 477

References 478

Chapter 29

Information Systems and Other Intelligent Transport System Innovations
PETER BONSALL 481

1. Introduction 481
   1.1. Dimensions of response 482
2. The impact of ITS on travellers' knowledge of the transport system 483
   2.1. Modelling the absence of information 483

2.2. Modelling the acquisition of information 486
2.3. To equilibrate or not to equilibrate? 490
2.4. Credibility and compliance 491
3. Sources of data for modelling the impacts of ITS 492
References 494

Chapter 30

Transit-assignment Models
JOAQUIN DE CEA and ENRIQUE FERNANDEZ 497

1. Introduction 497
2. Some basic concepts 499
3. Formulations for the transit-assignment problem 502
3.1. Transit-assignment models without congestion 502
3.2. Transit-assignment models with congestion 504
4. Final comments 506
References 507

Chapter 31

Models for Public Transport Demand and Benefit Assessments
KJELL JANSSON and REZA MORTAZAVI 509

1. Introduction 509
2. A general framework on choice of mode and benefit estimation 510
3. Basic characteristics of elasticity models 512
4. Basic characteristics of assignment models 513
4.1. Introduction 513
4.2. The RDT model 514
5. Basic characteristics of the multinomial logit model 515
6. tasks and problems of the models 517
7. Comparisons between models by use of examples 518
7.1. Assumptions 518
7.2. Example 1 519
7.3. Example 2 522
7.4. Conclusions of comparisons 524
8. Conclusions 524
References 525

Chapter 32

Strategic Freight Network Planning Models
TERRY L. FRIESZ 527

1. Introduction 527
2. Background 528
3. The key commercial models 529

4. Typology of models 530
5. Shipper–carrier simultaneity 533
6. Integrating CGE and network models 534
7. Non-monotonic models 534
8. Back-hauling and fleet constraints 535
9. Imperfect competition 535
10. Dynamic extensions 536
11. Validation 536
References 536

Chapter 33

Urban Freight Movement Modeling
GLEN D'ESTE 539

1. Introduction 539
2. The nature of urban freight 540
   2.1. Partitioning the urban freight market 541
   2.2. Measuring urban freight movements 544
3. Modeling framework 545
4. Steps in the modeling process 546
   4.1. Partitioning 546
   4.2. Zoning system 546
   4.3. Networks 547
   4.4. Trip generation 547
   4.5. Trip distribution 548
   4.6. Mode split 549
   4.7. Trip assignment 549
5. Other modeling issues 550
   5.1. Data availability 550
   5.2. Temporal variation 550
   5.3. Transient attractors 551
   5.4. Pace of change 552
6. Concluding remarks 552
References 552

Chapter 34

Value of Freight Travel-time Savings
GERARD DE JONG 553

1. Introduction 553
2. Classification of methods used in freight VTTS research 554
3. Summary of outcomes for road transport 557
4. Summary of outcomes for rail or combined transport 558
5. Summary of outcomes for inland waterways transport 559

6. Worked example: The 1994/1995 U.K. Freight VTTS Study 560
6.1. Recruitment and segmentation 560
6.2. Contents of the experiments 560
6.3. Model 561
7. Value of freight travel-time savings in the long run 562
8. Conclusion 563
References 563

Chapter 35

Modelling Performance: Rail
CHRIS NASH 565

1. Introduction 565
2. Characteristics of railways 566
2.1. Multiplicity of outputs 566
2.2. Complexity of the production process 567
2.3. Operating environment and government intervention 568
3. Partial productivity measures 569
4. Total factor productivity 570
5. Explaining the performance of individual railways 572
6. Conclusions 574
References 574

Chapter 36

The Performance of Bus-transit Operators
BRUNO DE BORGER and KRISTIAAN KERSTENS 577

1. Introduction 577
2. Performance measurement in bus transit 578
2.1. Performance concepts: Productivity, efficiency, and effectiveness 578
2.2. Specification of inputs and outputs for performance measurement in the bus industry 580
3. Performance of bus operators 583
3.1. Bus technology and performance: Some facts 583
3.2. Determinants of bus transit productivity and efficiency 586
4. Conclusion 593
References 594

Chapter 37

Models of Airport Performance
PETER FORSYTH 597

1. Introduction 597
2. Modeling demand, congestion cost, and pricing 597
2.1. Congestion models 598

2.2. Congestion-cost models 598
2.3. Congestion pricing models 599
3. Models of cost and efficiency 601
3.1. Problems in modeling performance 602
3.2. Benchmarking studies 604
3.3. Total factor productivity measures 605
3.4. Data envelopment analysis 606
3.5. Stochastic frontier analysis 607
References 607

Chapter 38

Modeling Performance: Measuring and Comparing Unit Cost Competitiveness of Airlines
TAE HOON OUM, CHUNYAN YU and MICHAEL Z.F. LI 609

1. Introduction 609
2. Methodologies 610
2.1. Total factor productivity 610
2.2. Unit cost analysis 610
3. A case study 613
3.1. Outputs 613
3.2. Inputs 613
3.3. Unit cost 614
3.4. Characteristics of the sample airlines 614
4. Empirical results and discussion 615
5. Summary and concluding remarks 621
References 622

Chapter 39

Highway Performance
PAUL ROUSE and MARTIN PUTTERILL 625

1. Introduction 625
2. Competitive market cost-management framework for highways 627
3. A general managerial performance framework 629
4. Advances in methods of analysis 632
5. Case 1 summary: Scale and efficiency effects from amalgamation 634
6. Case 2 summary: Environmental factors as cost drivers 637
7. Communicating service performance 640
References 641

Chapter 40

Modeling Performance in Liner Shipping
H.E. HARALAMBIDES and A.W. VEENSTRA 643

1. Introduction 643
2. Optimization of liner shipping operations 645
3. Market-structure modeling 647
4. New theoretical perspectives on liner shipping 650
   4.1. The theory of contestability 651
   4.2. The theory of the core 652
5. Concluding remarks 653
