groningen

Nanotopography and Morphology along Metal-Polymer Interfaces

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. E. Sterken
en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

vrijdag 19 december 2014 om 14:30 uur

door

Enne Theodoor Faber

geboren 12 februari 1984
te Amstelveen

Promotor
Prof. dr. J.Th.M. de Hosson

Copromotor
Dr. ir. W-P. Vellinga

Beoordelingscommissie
Prof. ir. L. Katgerman
Prof. dr. H.A. de Raedt
Prof. dr. B. Noheda Pinuaga

NANOTOPOGRAPHY AND MORPHOLOGY ALONG METAL-POLYMER INTERFACES

Enne Theodoor Faber

Zernike Institute PhD thesis series 2014-24
ISSN: 1570-1530
ISBN: 978-90-367-7458-1 (Printed version)
ISBN: 978-90-367-7457-4 (Electronic version)

Cover: Scanning Electron Microscopy image of polymer-steel laminate cross-sectioned by FIB and strained in tension.

The research presented in this thesis was carried out under project number M63.7.09343b in the framework of the Research Program of Materials innovation institute (M2i) in the Netherlands (www.m2i.nl).

It was performed in the Materials Science group of the Zernike Institute for Advanced Materials at the University of Groningen, the Netherlands.

To those who teach

Contents

1 Introduction 1

1.1 Motivation 1
1.2 State of the art 2
1.2.1 Cracking behavior 3
1.2.2 Interface chemistry 3
1.2.3 Polymer deformation 4
1.2.4 Metal plasticity 5
1.3 Objective 6
1.4 Characterization techniques 6
1.4.1 SEM 7
1.4.2 EBSD 9
1.4.3 FIB 10
1.5 Outline of the thesis 12

2 Calibration-free quantitative surface topography reconstruction in scanning electron microscopy 15

2.1 Abstract 15
2.2 Introduction 16
2.3 Theoretical background 17
2.3.1 Movement 18
2.3.2 Optics 19
2.4 Experimental 22
2.5 Data treatment 23
2.5.1 Fitting of experimental data 23
2.5.2 Calculation of parameters 27
2.5.3 Finding a unique solution 29
2.6 Three dimensional reconstructions 33
2.7 Conclusions 38

3 Limitations and possibilities of 3D SEM in practice; displacement of strained surface 39

3.1 Abstract 39
3.2 Introduction 40
3.3 Experimental techniques 43

3.3.1 Control sample 43
3.3.2 Charge accumulation in diatom frustules..... 45
3.3.3 3D surface displacements..... 45
3.4 Results and discussion 46
3.4.1 Control sample 46
3.4.2 Charge accumulation in diatom frustules..... 50
3.4.3 3D surface displacements..... 53
3.5 Conclusions..... 61

4 Local delamination on heavily deformed polymer-metal interfaces: evidence from microscopy..... 63

4.1 Abstract 63
4.2 Introduction..... 64
4.3 Experimental techniques..... 65
4.3.1 Materials..... 65
4.3.2 Sample preparation 69
4.4 Results 71
4.4.1 Evolving roughness 71
4.4.2 Local delamination 75
4.5 Discussion 77
4.5.1 Adhesion and length scales 77
4.5.2 Interface length 79
4.5.3 Overhanging shapes 81
4.6 Conclusions..... 84

5 FIB-etching of polymer/metal laminates and its effect on the mechanical performance 85

5.1 Abstract 85
5.2 Introduction..... 86
5.3 Experimental..... 89
5.4 Results and discussion 92
5.4.1 Sample A 92
5.4.2 Sample B 94
5.4.3 Sample C 95
5.4.4 Sample D: cracking during in-situ tensile deformation 100
5.5 Conclusions..... 102

6 Evolution of grain structure in deformed metal-polymer laminates 103

6.1 Abstract 103
6.2 Introduction..... 104

6.3 Experiments 105
6.4 Results and discussion 106
6.5 Summary and conclusions 119

7 Summary and outlook 121

7.1 Summary 121
7.2 Future work 124
7.3 Samenvatting 124
