## Abstract

Old mobile devices were less powerful and did not support various functions. Therefore complex data visualization with different structure was impossible with old devices. Recent mobile are more powerful having high resolution, more colors, large screen, fast connectivity, various tools than old one, but still visualization on mobile devices has remained a challenging task. Even though current mobile devices have high resolution but it is small as compared to

desktop. In such situations visualization of image data on mobile devices takes a lot of efforts. Researchers are working on lot of image visualization techniques on mobile devices. In this paper discussion is on such novel image visualization techniques on mobile devices and their analysis.
