CONTENTS

ACKNOWLEDGEMENT	xv
ACRONYMS	xvii
NOTATION	xxv
1 INTRODUCTION	1
1.1 Birth of satellite communications	1
1.2 Development of satellite communications	1
1.3 Configuration of a satellite communications system	3
1.3.1 Communications links	4
1.3.2 The space segment	5
1.3.3 The ground segment	8
1.4 Types of orbit	9
1.5 Radio regulations	12
1.5.1 The ITU organisation	12
1.5.2 Space radiocommunications services	13
1.5.3 Frequency allocation	13
1.6 Technology trends	14
1.7 Services	15
1.8 The way forward	17
References	18
2 ORBITS AND RELATED ISSUES	19
2.1 Keplerian orbits	19
2.1.1 Kepler's laws	19
2.1.2 Newton's law	19
2.1.3 Relative movement of two point bodies	20
2.1.4 Orbital parameters	23
2.1.5 The earth's orbit	28
2.1.6 Earth-satellite geometry	35
2.1.7 Eclipses of the sun	41
2.1.8 Sun-satellite conjunction	42
2.2 Useful orbits for satellite communication	43
2.2.1 Elliptical orbits with non-zero inclination	43
2.2.2 Geosynchronous elliptic orbits with zero inclination	54
2.2.3 Geosynchronous circular orbits with non-zero inclination	56
2.2.4 Sub-synchronous circular orbits with zero inclination	59
2.2.5 Geostationary satellite orbits	59

2.3	Perturbations of orbits	68
2.3.1	The nature of the perturbations	69
2.3.2	The effect of perturbations; orbit perturbation	71
2.3.3	Perturbations of the orbit of geostationary satellites	73
2.3.4	Orbit corrections: station keeping of geostationary satellites	81
2.4	Conclusion	97
	References	97
3	BASEBAND SIGNALS AND QUALITY OF SERVICE	99
3.1	Baseband signals	99
3.1.1	Digital telephone signal	100
3.1.2	Sound signals	103
3.1.3	Television signals	104
3.1.4	Data and multimedia signals	107
3.2	Performance objectives	108
3.2.1	Telephone	108
3.2.2	Sound	108
3.2.3	Television	108
3.2.4	Data	108
3.3	Availability objectives	109
3.4	Delay	111
3.4.1	Delay in terrestrial network	111
3.4.2	Propagation delay over satellite links	111
3.4.3	Baseband-signal processing time	112
3.4.4	Protocol-induced delay	112
3.5	Conclusion	112
	References	113
4	DIGITAL COMMUNICATIONS TECHNIQUES	115
4.1	Baseband formatting	115
4.1.1	Encryption	115
4.1.2	Scrambling	117
4.2	Digital modulation	118
4.2.1	Two-state modulation—BPSK and DE-BPSK	119
4.2.2	Four-state modulation—QPSK	120
4.2.3	Variants of QPSK	121
4.2.4	Higher-order PSK and APSK	124
4.2.5	Spectrum of unfiltered modulated carriers	125
4.2.6	Demodulation	125
4.2.7	Modulation spectral efficiency	130
4.3	Channel coding	131
4.3.1	Block encoding and convolutional encoding	132
4.3.2	Channel decoding	132
4.3.3	Concatenated encoding	133
4.3.4	Interleaving	134
4.4	Channel coding and the power–bandwidth trade-off	135
4.4.1	Coding with variable bandwidth	135
4.4.2	Coding with constant bandwidth	137
4.4.3	Example: Downlink coding with on-board regeneration	139
4.4.4	Conclusion	139

4.5	Coded modulation	140
4.5.1	Trellis coded modulation	141
4.5.2	Block coded modulation	144
4.5.3	Decoding coded modulation	145
4.5.4	Multilevel trellis coded modulation	145
4.5.5	TCM using a multidimensional signal set	146
4.5.6	Performance of coded modulations	146
4.6	End-to-end error control	146
4.7	Digital video broadcasting via satellite (DVB-S)	148
4.7.1	Transmission system	148
4.7.2	Error performance requirements	152
4.8	Second generation DVB-S	152
4.8.1	New technology in DVB-S2	153
4.8.2	Transmission system architecture	154
4.8.3	Error performance	156
4.9	Conclusion	157
4.9.1	Digital transmission of telephony	157
4.9.2	Digital broadcasting of television	159
	References	160
5	UPLINK, DOWNLINK AND OVERALL LINK PERFORMANCE; INTERSATELLITE LINKS	163
5.1	Configuration of a link	163
5.2	Antenna parameters	164
5.2.1	Gain	164
5.2.2	Radiation pattern and angular beamwidth	165
5.2.3	Polarisation	168
5.3	Radiated power	170
5.3.1	Effective isotropic radiated power (EIRP)	170
5.3.2	Power flux density	170
5.4	Received signal power	171
5.4.1	Power captured by the receiving antenna and free space loss	171
5.4.2	Example 1: Uplink received power	172
5.4.3	Example 2: Downlink received power	173
5.4.4	Additional losses	174
5.4.5	Conclusion	176
5.5	Noise power spectral density at the receiver input	176
5.5.1	The origins of noise	176
5.5.2	Noise characterisation	177
5.5.3	Noise temperature of an antenna	180
5.5.4	System noise temperature	185
5.5.5	System noise temperature: Example	186
5.5.6	Conclusion	186
5.6	Individual link performance	186
5.6.1	Carrier power to noise power spectral density ratio at receiver input	187
5.6.2	Clear sky uplink performance	187
5.6.3	Clear sky downlink performance	189
5.7	Influence of the atmosphere	193
5.7.1	Impairments caused by rain	193
5.7.2	Other impairments	207
5.7.3	Link impairments—relative importance	209

5.7.4	Link performance under rain conditions	209
5.7.5	Conclusion	210
5.8	Mitigation of atmospheric impairments	210
5.8.1	Depolarisation mitigation	210
5.8.2	Attenuation mitigation	211
5.8.3	Site diversity	211
5.8.4	Adaptivity	212
5.8.5	Cost-availability trade-off	212
5.9	Overall link performance with transparent satellite	213
5.9.1	Characteristics of the satellite channel	214
5.9.2	Expression for $(C/N_0)_T$	218
5.9.3	Overall link performance for a transparent satellite without interference or intermodulation	221
5.10	Overall link performance with regenerative satellite	225
5.10.1	Linear satellite channel without interference	226
5.10.2	Non-linear satellite channel without interference	227
5.10.3	Non-linear satellite channel with interference	228
5.11	Link performance with multibeam antenna coverage vs monobeam coverage	230
5.11.1	Advantages of multibeam coverage	231
5.11.2	Disadvantages of multibeam coverage	234
5.11.3	Conclusion	237
5.12	Intersatellite link performance	237
5.12.1	Frequency bands	238
5.12.2	Radio-frequency links	238
5.12.3	Optical links	239
5.12.4	Conclusion	245
	References	246
6	MULTIPLE ACCESS	247
6.1	Layered data transmission	247
6.2	Traffic parameters	248
6.2.1	Traffic intensity	248
6.2.2	Call blocking probability	248
6.2.3	Burstiness	248
6.3	Traffic routing	249
6.3.1	One carrier per station-to-station link	250
6.3.2	One carrier per transmitting station	251
6.3.3	Comparison	251
6.4	Access techniques	251
6.4.1	Access to a particular satellite channel (or transponder)	251
6.4.2	Multiple access to the satellite channel	252
6.4.3	Performance evaluation—efficiency	253
6.5	Frequency division multiple access (FDMA)	253
6.5.1	TDM/PSK/FDMA	254
6.5.2	SCPC/FDMA	254
6.5.3	Adjacent channel interference	254
6.5.4	Intermodulation	254
6.5.5	FDMA efficiency	258
6.5.6	Conclusion	260

6.6	Time division multiple access (TDMA)	260
6.6.1	Burst generation	260
6.6.2	Frame structure	262
6.6.3	Burst reception	264
6.6.4	Synchronisation	265
6.6.5	TDMA efficiency	270
6.6.6	Conclusion	271
6.7	Code division multiple access (CDMA)	272
6.7.1	Direct sequence (DS-CDMA)	273
6.7.2	Frequency hopping CDMA (FH-CDMA)	276
6.7.3	Code generation	277
6.7.4	Synchronisation	278
6.7.5	CDMA efficiency	280
6.7.6	Conclusion	281
6.8	Fixed and on-demand assignment	283
6.8.1	The principle	283
6.8.2	Comparison between fixed and on-demand assignment	283
6.8.3	Centralised or distributed management of on-demand assignment	284
6.8.4	Conclusion	284
6.9	Random access	285
6.9.1	Asynchronous protocols	286
6.9.2	Protocols with synchronisation	289
6.9.3	Protocols with assignment on demand	290
6.10	Conclusion	290
