<i>Preface</i>	page xv
<i>List of Contributors</i>	xvii
Introduction	1
SECTION I POLYMER GELS	5
1 Polymer Gel Actuators: Fundamentals	7
<i>Paul Calvert</i>	
1.1 Introduction and Historical Overview	7
1.2 Properties of Gels	8
1.2.1 Biological Gels	8
1.2.2 Mechanical Properties of Simple, Single-Phase Gels	9
1.2.3 Elastic Moduli	10
1.2.4 Strength	10
1.2.5 Multi-Phase Gels	12
1.2.6 Double Network Gels	13
1.2.7 Transport Properties	14
1.2.8 Drying	15
1.3 Chemical and Physical Formation of Gels	16
1.4 Actuation Methods	19
1.4.1 Thermally Driven Gel Actuators	19
1.4.2 Chemically Driven Gel Actuators	20
1.4.3 Gels Driven by Oscillating Reactions	22
1.4.4 Light Actuated Gels	23
1.4.5 Electrically Driven Gel Actuators	23
1.4.6 Electro- and Magneto-Rheological Composites	25
1.4.7 LC Elastomers	26
1.5 Performance of Gels as Actuators	26
1.6 Applications of Electroactive Gels	30
1.6.1 Gel Valves and Pumps	30
1.6.2 Light Modulators	30
1.6.3 Gel Drug Delivery	31
1.6.4 Gel Sensors	32
1.7 Conclusions	32
References	33

2	Bio-Responsive Hydrogels for Biomedical Applications	43
	<i>Tom McDonald, Alison Patrick, Richard Williams, Brian G. Cousins and Rein V. Ulijn</i>	
2.1	Introduction	43
2.2	Chemical Hydrogels	44
2.3	Physical Hydrogels	44
2.4	Defining Bio-Responsive Hydrogels	44
2.5	Bio-Responsive Chemical Hydrogels	46
	2.5.1 Actuation Based on Changing the Cross-Linking Density	46
	2.5.2 Actuation Based on Changes in Electrostatic Interactions	49
	2.5.3 Actuation Based on Conformational Changes	51
2.6	Bio-Responsive Physical Hydrogels	53
	2.6.1 Enzyme-Responsive Physical Hydrogels	53
2.7	Electroactive Chemical Hydrogels	56
2.8	Conclusion	57
	References	57
3	Stimuli-Responsive and ‘Active’ Polymers in Drug Delivery	61
	<i>Aram Omer Saeed, Jóhannes Páll Magnússon, Beverley Twaites and Cameron Alexander</i>	
3.1	Introduction	61
3.2	Drug Delivery: Examples, Challenges and Opportunities for Polymers	62
	3.2.1 Oral Drug Delivery Systems	62
	3.2.2 Parenteral Drug Delivery	63
	3.2.3 Topical and Transdermal Drug Delivery	63
	3.2.4 Delivery Challenges for Biomolecular Drugs and Cell Therapeutics	64
	3.2.5 Peptides and Proteins	64
	3.2.6 Nucleic Acids	65
	3.2.7 Cell Delivery	65
3.3	Emerging State-of-the-Art Mechanisms in Polymer Controlled Release Systems	67
	3.3.1 Technologies for Controlled Drug Release	67
	3.3.2 Polymer–Drug Conjugates	67
	3.3.3 Polymer–Protein Conjugates	67
	3.3.4 Polymer–Nucleic Acid Conjugates	68
	3.3.5 Polymer–Nucleic Acid Complexes	68
3.4	Responsive or ‘Smart’ Polymers in Drug Delivery	73
	3.4.1 Soluble Smart Polymers	73
	3.4.2 Responsive Polymer–Drug Conjugates	76
	3.4.3 Responsive Polymer–Protein Conjugates	76
	3.4.4 Responsive Polymers for DNA Delivery	77

3.5	Recent Highlights of Actuated Polymers for Drug Delivery Applications	78
3.6	Conclusions and Future Outlook	80
	References	81
4	Thermally Driven Hydrogel Actuator for Controllable Flow Rate Pump in Long-Term Drug Delivery	89
	<i>Piero Chiarelli and Pietro Ragni</i>	
4.1	Introduction	89
4.2	Materials and Methods	90
4.3	Hydrogel Actuator	90
	4.3.1 Thermo-Mechanical Gel Dynamics	91
	4.3.2 Experimental Results	93
4.4	Pump Functioning	97
4.5	Conclusion	98
	References	98
	SECTION II IONIC POLYMER–METAL COMPOSITES (IPMC)	101
5	IPMC Actuators: Fundamentals	103
	<i>Kinji Asaka and Keisuke Oguro</i>	
5.1	Introduction	103
5.2	Fabrication	104
	5.2.1 Ionic Polymer	104
	5.2.2 Plating Methods	105
5.3	Measurement	108
5.4	Performance of the IPMC Actuator	110
5.5	Model	113
5.6	Recent Developments	116
5.7	Conclusion	117
	References	118
6	Active Microcatheter and Biomedical Soft Devices Based on IPMC Actuators	121
	<i>Kinji Asaka and Keisuke Oguro</i>	
6.1	Introduction	121
6.2	Fabrication of the IPMC Device	122
6.3	Applications to the Microcatheter	124
6.4	Other Applications	127
	6.4.1 Sheet-Type Braille Display	127
	6.4.2 Underwater Microrobot	130
	6.4.3 Linear Actuators for a Biped Walking Robot	134
6.5	Conclusions	135
	References	135

7	Implantable Heart-Assist and Compression Devices Employing an Active Network of Electrically-Controllable Ionic Polymer–Metal Nanocomposites	137
	<i>Mohsen Shahinpoor</i>	
7.1	Introduction	137
7.2	Heart Failure	139
7.3	Background of IPMNCs	140
7.4	Three-Dimensional Fabrication of IPMNCs	141
7.5	Electrically-Induced Robotic Actuation	142
7.6	Distributed Nanosensing and Transduction	144
7.7	Modeling and Simulation	146
7.8	Application of IPMNCs to Heart Compression and Assist in General	149
7.9	Manufacturing Thick IPMNC Fingers	155
7.10	Conclusions	157
	References	157
8	IPMC Based Tactile Displays for Pressure and Texture Presentation on a Human Finger	161
	<i>Masashi Konyo and Satoshi Tadokoro</i>	
8.1	Introduction	161
8.2	IPMC Actuators as a Tactile Stimulator	162
8.3	Wearable Tactile Display	164
8.4	Selective Stimulation Method for Tactile Synthesis	165
8.5	Texture Synthesis Method	167
8.6	Display Method for Pressure Sensation	168
	8.6.1 Method	168
	8.6.2 Evaluation	168
8.7	Display Method for Roughness Sensation	169
	8.7.1 Method	169
	8.7.2 Evaluation	170
8.8	Display Method for Friction Sensation	171
8.9	Synthesis of Total Textural Feeling	172
	8.9.1 Method	172
	8.9.2 Experiments	172
8.10	Conclusions	173
	References	173
9	IPMC Assisted Infusion Micropumps	175
	<i>Il-Seok Park, Sonia Vohnout, Mark Banister, Sangki Lee, Sang-Mun Kim and Kwang J. Kim</i>	
9.1	Introduction	175
9.2	Background of IPMCs	176
9.3	Miniature Disposable Infusion IPMC Micropumps	177
	9.3.1 Configuration of the IPMC Infusion Pump	178

9.3.2	The Control System	180
9.3.3	Performance Testing	181
9.4	Modelling for IPMC Micropumps	181
9.4.1	Equivalent Bimorph Beam Model for IPMC Actuators	181
9.4.2	IPMC Diaphragm	182
9.5	Conclusions	189
	References	189
SECTION III CONJUGATED POLYMERS		193
10	Conjugated Polymer Actuators: Fundamentals	195
	<i>Geoffrey M. Spinks, Gursel Alici, Scott McGovern, Binbin Xi and Gordon G. Wallace</i>	
10.1	Introduction	195
10.2	Molecular Mechanisms of Actuation in ICPs	197
10.3	Comparison of Actuation Performance in Various ICPs	200
10.4	Electrochemistry of ICPs	201
10.5	Effect of Composition, Geometry and Electrolyte on Actuation of PPy	204
10.5.1	Effect of the Dopant Ion	204
10.5.2	Effect of Solvent	206
10.5.3	Charge Transfer Processes	208
10.5.4	Effect of Porosity/Morphology	212
10.6	Mechanical System Response	212
10.7	Device Design and Optimization	217
10.7.1	How to Tailor Actuator Performance to Meet Design Requirements	217
10.7.2	Design of a Swimming Device	219
10.7.3	Device Testing	221
10.8	Future Prospects	222
	References	223
11	Steerable Catheters	229
	<i>Tina Shoa, John D. Madden, Nigel R. Munce and Victor X.D. Yang</i>	
11.1	Introduction	229
11.2	Catheters: History and Current Applications	229
11.3	Catheter Design Challenges	231
11.3.1	Biocompatibility	231
11.3.2	Small Size	232
11.3.3	Low Cost	232
11.3.4	Structural Rigidity	232
11.4	Active Steerable Catheters	234
11.4.1	Non-EAP Based Steerable Catheters	234
11.4.2	EAP Based Steerable Catheters	235

11.4.3	Conjugated Polymer Based Steerable Catheters	237
11.5	Discussion and Conclusion	246
	References	246
12	Microfabricated Conjugated Polymer Actuators for Microvalves, Cell Biology, and Microrobotics	249
	<i>Elisabeth Smela</i>	
12.1	Introduction	249
12.2	Actuator Background	250
12.3	Microfabrication	251
12.4	Single Hinge Bilayer Devices: Flaps and Lids	253
12.4.1	Bilayer Actuators	254
12.4.2	Drug Delivery	254
12.4.3	Cell Manipulation	255
12.4.4	Cell-Based Sensors	256
12.5	Multi-Bilayer Devices: Positioning Tools	257
12.5.1	Microtools	257
12.5.2	Microrobot	257
12.6	Swelling Film Devices: Valves	258
12.6.1	Out-of-Plane Actuation Strain	259
12.6.2	Microvalve	259
12.7	Lifetime	260
12.8	Integrated Systems	260
12.9	Conclusions	261
	References	261
13	Actuated Pins for Braille Displays	265
	<i>Geoffrey M. Spinks and Gordon G. Wallace</i>	
13.1	Introduction	265
13.2	Requirements for the Electronic Braille Screen	266
13.3	Mechanical Analysis of Actuators Operating Against Springs	268
13.4	Polypyrrole Actuators for Electronic Braille Pins	271
13.5	Other Polymer Actuation Systems for Electronic Braille Pins	274
13.6	Summary	275
	Acknowledgements	276
	References	276
14	Nanostructured Conducting Polymer Biomaterials and Their Applications in Controlled Drug Delivery	279
	<i>Mohammad Reza Abidian and David C. Martin</i>	
14.1	Introduction	279
14.2	Nanostructured Conducting Polymers	280
14.2.1	Fabrication	280
14.2.2	Biomedical Application	282

14.3	Conducting Polymer Nanotubes for Controlled Drug Delivery	285
14.3.1	Electrospinning	286
14.3.2	Electrospinning of Dexamethasone-Loaded Template PLGA Nanofibers	287
14.3.3	Electrochemical Deposition of PEDOT Nanotubes	288
14.3.4	Controlled Drug Delivery from PEDOT Nanotubes	289
14.4	Conclusions	293
	Acknowledgements	293
	References	293
15	Integrated Oral Drug Delivery System with Valve Based on Polypyrrole	301
	<i>Thorsten Götsche and Stefan Haerberle</i>	
15.1	Introduction	301
15.2	System Concept	303
15.3	Osmotic Pressure Pump	305
15.3.1	Valve Closed	305
15.3.2	Valve Open	306

SECTION IV PIEZOELECTRIC AND ELECTROSTRICTIVE POLYMERS		317
16	Piezoelectric and Electrostrictive Polymer Actuators: Fundamentals	319
	<i>Zhimin Li and Zhongyang Cheng</i>	
16.1	Introduction	319
16.2	Fundamentals of Electromechanical Materials	320
16.2.1	Piezoelectric Effect	320
16.2.2	Electrostrictive Effect	321
16.2.3	Other Effects	323
16.3	Material Properties Related to Electromechanical Applications	324
16.3.1	Electromechanical Coupling Factor (k)	325
16.3.2	Elastic Response	326
16.3.3	Frequency and Temperature Responses	326
16.4	Typical Electromechanical Polymers and Their Properties	328
16.4.1	Piezoelectric Polymers	328
16.4.2	Electrostrictive Polymers	330

16.4.3	Maxwell Stress Effect Based Polymers	332
16.4.4	Practical Considerations	332
16.5	Conclusions	332
	References	332
17	Miniature High Frequency Focused Ultrasonic Transducers for Minimally Invasive Imaging Procedures	335
	<i>Aaron Fleischman, Sushma Srivanas, Chaitanya Chandrana and Shuvo Roy</i>	
17.1	Introduction	335
17.2	Coronary Imaging Needs	337
17.2.1	Vulnerable Plaques	337
17.2.2	Stent Thrombosis	339
17.3	High Resolution Ultrasonic Transducers	340
17.3.1	Polymer Transducers	341
17.4	Fabrication Techniques	342
17.5	Testing Methods	345
17.6	Results	346
17.7	Conclusion	351

SECTION V DIELECTRIC ELASTOMERS		385
20	Dielectric Elastomer Actuators: Fundamentals	387
	<i>Roy Kornbluh, Richard Heydt and Ron Pelrine</i>	
20.1	Introduction	387
20.2	Basic Principle of Operation	388
20.3	Dielectric Elastomer Materials	389
20.4	Transducer Designs and Configurations	391
20.5	Operational Considerations	392
	References	393
21	Biomedical Applications of Dielectric Elastomer Actuators	395
	<i>John S. Bashkin, Roy Kornbluh, Harsha Prahlad and Annjoe Wong-Foy</i>	
21.1	Introduction	395
21.2	UMA Based Actuators and Their Application to Pumps	396
21.3	Mechanical Stimulation Using Thickness-Mode Actuation	400
21.4	Implantable Artificial Diaphragm Muscle	403
21.5	Implantable Artificial Facial Muscles	405
21.6	Limb Prosthetics and Orthotics	406
21.7	Mechanical Actuation for 'Active' Cell Culture Assays	408
21.8	Conclusions	409
	References	410
22	MRI Compatible Device for Robotic Assisted Interventions to Prostate Cancer	411
	<i>Jean-Sébastien Plante, Lauren Devita, Kenjiro Tadakuma and Steven Dubowsky</i>	
22.1	Introduction	411
22.2	Prostate Cancer Therapy	413
	22.2.1 Prostate Cancer Detection	413
	22.2.2 Prostate Cancer Treatment	414
	22.2.3 Needle Placement in MRI Systems	415
22.3	Elastically Averaged Parallel Manipulator Using Dielectric Elastomer Actuators	415
	22.3.1 Design Requirements	415
	22.3.2 Manipulator Concept	417
	22.3.3 Manipulator Analytical Model	418
22.4	Results	420
	22.4.1 Analytical Results	421
	22.4.2 Experimental Results	423

22.5	Conclusions	424
	Acknowledgements	424
	References	424
23	A Braille Display System for the Visually Disabled Using a Polymer Based Soft Actuator	427
	<i>Hyouk Ryeol Choi, Ig Mo Koo, Kwangmok Jung, Se-gon Roh, Ja Choon Koo, Jae-do Nam and Young Kwan Lee</i>	
23.1	Introduction	427
23.2	Fundamentals of Actuation Principle	428
23.3	Design of Tactile Display Device	430
23.4	Braille Display System	431
	23.4.1 Fabrication	431
	23.4.2 System Outline	432
	23.4.3 Experiments	434
23.5	Advanced Applications	437
	23.5.1 Wearable Tactile Display System	437
	23.5.2 Virtual Reality Tactile Display	440
23.6	Conclusions	441
	References	441
