ON COVER— Overlook of the approximately 150,000-km² Sichuan Basin, the important natural gas producing area in China, using 90-m resolution topographic data collected by NASA's Shuttle Radar Topographic Mission in 2000 and obtained through the CGIAR Consortium for Spatial Information (<http://srtm.csi.cgiar.org/>). In the center of the image, three seismic reflection profiles provided by the PetroChina Company Limited show the major sequences and structures across the Longmen Shan fold-thrust belt and its foreland in the western Sichuan Basin (see related paper by D. Jia, G. Wei, Z. Chen, B. Li, Q. Zeng, and G. Yang beginning on p. 1425 of this issue of the *Bulletin*), which are not only the key regions to demonstrate the Mesozoic-Cenozoic tectonic evolution in China but also the prospective traps indicated by structural features. The image was prepared by Qiupeng Jia and Dong Jia.

GEOLOGIC NOTES

<i>Natural fracture distributions in sinuous, channel-fill sandstones of the Cedar Mountain Formation, Utah</i> John C. Lorenz, Scott P. Cooper, and William A. Olsson	1293
<i>Stratigraphy and sedimentology of the Middle Ordovician Hawaz Formation (Murzuq Basin, Libya)</i> Emilio Ramos, Mariano Marzo, Jordi M. de Gibert, Khaeri S. Tawengi, Abdalla A. Khoja, and Néstor D. Bolatti	1309

GEOHORIZON

<i>Three-dimensional geomechanical modeling for constraint of subseismic fault simulation</i> Laurent Maerten, Paul Gillespie, and Jean-Marc Daniel	1337
