Foreword xiii

Preface xv

About the Author xix

List of Abbreviations xxi

I Self-Organization 1

1 Introduction to Self-Organization 3
1.1 Understanding self-organization 4
1.2 Application scenarios for self-organization 5

2 System Management and Control – A Historical Overview 7
2.1 System architecture 8
2.2 Management and control 10
2.2.1 Centralized control 10
2.2.2 Distributed systems 11
2.2.3 Self-organizing systems 14

3 Self-Organization – Context and Capabilities 17
3.1 Complex systems 17
3.2 Self-organization and emergence 19
3.3 Systems lacking self-organization 22
3.3.1 External control 22
3.3.2 Blueprints and templates 22
3.4 Self-X capabilities 23
3.5 Consequences of emergent properties 24
3.6 Operating self-organizing systems 26
3.6.1 Asimov's Laws of Robotics 26
3.6.2 Attractors 28
3.7 Limitations of self-organization 30

4 Natural Self-Organization **33**
4.1 Development of understandings 33
4.2 Examples in natural sciences 34
4.2.1 Biology 35
4.2.2 Chemistry 36
4.3 Differentiation self-organization and bio-inspired 37
4.3.1 Exploring bio-inspired 37
4.3.2 Bio-inspired techniques 38
4.3.3 Self-organization vs bio-inspired 40

5 Self-Organization in Technical Systems **41**
5.1 General applicability 41
5.1.1 Autonomous systems 41
5.1.2 Multi-robot systems 42
5.1.3 Autonomic networking 43
5.1.4 Mobile Ad Hoc Networks 44
5.1.5 Sensor and Actor Networks 45
5.2 Operating Sensor and Actor Networks 46

6 Methods and Techniques **49**
6.1 Basic methods 49
6.1.1 Positive and negative feedback 50
6.1.2 Interactions among individuals and with the environment 52
6.1.3 Probabilistic techniques 53
6.2 Design paradigms for self-organization 54
6.2.1 Design process 54
6.2.2 Discussion of the design paradigms 55
6.3 Developing nature-inspired self-organizing systems 57
6.4 Modeling self-organizing systems 58
6.4.1 Overview of modeling techniques 58
6.4.2 Differential equation models 59
6.4.3 Monte Carlo simulations 60
6.4.4 Choosing the right modeling technique 60

Appendix I Self-Organization – Further Reading **61**

II Networking Aspects: Ad Hoc and Sensor Networks **65**

7 Mobile Ad Hoc and Sensor Networks **67**
7.1 Ad hoc networks 67
7.1.1 Basic properties of ad hoc networks 68
7.1.2 Mobile Ad Hoc Networks 70
7.2 Wireless Sensor Networks 73
7.2.1 Basic properties of sensor networks 73
7.2.2 Composition of single-sensor nodes 76
7.2.3 Communication in sensor networks 79

7.2.4 Energy aspects 83
7.2.5 Coverage and deployment 83
7.2.6 Comparison between MANETs and WSNs 85
7.2.7 Application examples 86
7.3 Challenges and research issues 90
7.3.1 Required functionality and constraints 90
7.3.2 Research objectives 92

8 Self-Organization in Sensor Networks **95**
8.1 Properties and objectives 95
8.2 Categorization in two dimensions 97
8.2.1 Horizontal dimension 97
8.2.2 Vertical dimension 99
8.3 Methods and application examples 101
8.3.1 Mapping with primary self-organization methods 101
8.3.2 Global state 103
8.3.3 Location information 104
8.3.4 Neighborhood information 105
8.3.5 Local state 106
8.3.6 Probabilistic techniques 107

9 Medium Access Control **109**
9.1 Contention-based protocols 110
9.2 Sensor MAC 113
9.2.1 Synchronized listen/sleep cycles 114
9.2.2 Performance aspects 116
9.2.3 Performance evaluation 118
9.3 Power-Control MAC protocol 119
9.4 Conclusion 122

10 Ad Hoc Routing **123**
10.1 Overview and categorization 125
10.1.1 Address-based routing vs data-centric forwarding 125
10.1.2 Classification of ad hoc routing protocols 127
10.2 Principles of ad hoc routing protocols 131
10.2.1 Destination Sequenced Distance Vector 131
10.2.2 Dynamic Source Routing 132
10.2.3 Ad Hoc on Demand Distance Vector 134
10.2.4 Dynamic MANET on Demand 138
10.3 Optimized route stability 141
10.4 Dynamic address assignment 143
10.4.1 Overview and centralized assignment 144
10.4.2 Passive Duplicate Address Detection 145
10.4.3 Dynamic Address Allocation 146
10.5 Conclusion 149

11 Data-Centric Networking **153**
11.1 Overview and classification 155
11.1.1 Data dissemination 156
11.1.2 Network-centric operation 158
11.1.3 Related approaches 159
11.2 Flooding, gossiping and optimizations 159
11.2.1 Flooding 160
11.2.2 Pure gossiping 163
11.2.3 Optimized gossiping 165
11.3 Agent-based techniques 170
11.4 Directed diffusion 173
11.4.1 Basic algorithm 173
11.4.2 Mobility support 176
11.4.3 Energy efficiency 177
11.5 Data aggregation 178
11.5.1 Principles and objectives 179
11.5.2 Aggregation topologies 181
11.6 Conclusion 184

12 Clustering **185**
12.1 Principles of clustering 186
12.1.1 Requirements and classification 187
12.1.2 *k*-means 189
12.1.3 Hierarchical clustering 190
12.2 Clustering for efficient routing 191
12.2.1 Low-Energy Adaptive Clustering Hierarchy 192
12.2.2 Hybrid Energy-Efficient Distributed Clustering Approach 195
12.3 Conclusion 196

Appendix II Networking Aspects – Further Reading **199**

III Coordination and Control: Sensor and Actor Networks **203**

13 Sensor and Actor Networks **205**
13.1 Introduction 205
13.1.1 Composition of SANETs – an example 206
13.1.2 Properties and capabilities 207
13.1.3 Components of SANET nodes 210
13.1.4 Application examples 212
13.2 Challenges and research objectives 214
13.2.1 Communication and coordination 215
13.2.2 Collaboration and task allocation 216
13.3 Limitations 217

14 Communication and Coordination **219**
14.1 Synchronization vs coordination 220

14.1.1 Problem statement . . . 220
14.1.2 Logical time . . . 222
14.1.3 Coordination . . . 223
14.2 Time synchronization in WSNs and SANETs . . . 223
14.2.1 Requirements and objectives . . . 224
14.2.2 Conventional approaches . . . 225
14.2.3 Algorithms for WSNs . . . 228
14.3 Distributed coordination . . . 231
14.3.1 Scalable coordination . . . 231
14.3.2 Selected algorithms . . . 232
14.3.3 Integrated sensor–actor and actor–actor coordination . . . 235
14.3.4 Problems with selfish nodes . . . 237
14.4 In-network operation and control . . . 238
14.5 Conclusion . . . 244

15 Collaboration and Task Allocation **247**
15.1 Introduction to MRTA . . . 248
15.1.1 Primary objectives . . . 250
15.1.2 Classification and taxonomy . . . 252
15.2 Intentional cooperation – auction-based task allocation . . . 255
15.2.1 Open Agent Architecture . . . 255
15.2.2 MURDOCH . . . 257
15.2.3 Dynamic negotiation algorithm . . . 258
15.3 Emergent cooperation . . . 262
15.3.1 Stimulation by work . . . 263
15.3.2 Stimulation by state . . . 264
15.4 Conclusion . . . 267

Appendix III Coordination and Control – Further Reading **269**

IV Self-Organization Methods in Sensor and Actor Networks **273**

16 Self-Organization Methods – Revisited **275**
16.1 Self-organization methods in SANETs . . . 277
16.2 Positive and negative feedback . . . 278
16.3 Interactions among individuals and with the environment . . . 282
16.4 Probabilistic techniques . . . 286

17 Evaluation Criteria **291**
17.1 Scalability . . . 292
17.2 Energy considerations . . . 293
17.2.1 Energy management . . . 293
17.2.2 Transmission power management . . . 294
17.3 Network lifetime . . . 295
17.3.1 Definition of 'network lifetime' . . . 295
17.3.2 Scenario-based comparisons of network lifetime . . . 300

V Bio-inspired Networking **303**

18 Bio-inspired Systems **305**
18.1 Introduction and overview 306
18.1.1 Ideas and concepts 306
18.1.2 Bio-inspired research fields 308
18.2 Swarm Intelligence 312
18.2.1 Principles of ant foraging 312
18.2.2 Ant-based routing 315
18.2.3 Ant-based task allocation 316
18.3 Artificial Immune System 318
18.3.1 Principles of the immune system 318
18.3.2 Application examples 322
18.4 Cellular signaling pathways 323
18.4.1 Introduction to signaling pathways 323
18.4.2 Applicability in SANETs 327
18.5 Conclusion 329

Appendix IV Bio-inspired Networking – Further Reading **331**

Bibliography **335**

Index **355**
