Component interface documentation: what do we need and why do we need it?  
Visualization techniques for program comprehension: a literature review  
Supporting program comprehension for refactoring operations with annotations  
On specifying systems that connect to the physical world  
A framework to support non-fragile agile agent-oriented software development  
Information processing and the recovery of argument structure asymmetries  
System development life-cycle support for service-oriented applications  
How to create the magic wand? : currently implementable formulation of the problem  
Transforming a non-software company to a software company by exploiting the LYEE methodology  
Comparing approaches in AORE through ISO/IEC 9126  
A formal approach for the forensic analysis of logs  
Common criteria approach to J2ME CLDC security requirements  
Enforcing security policies on programs  
Software profiling for deterministic replay debugging of user code  
Source code verification tools for software security bugs  
Theory on software diagnosis for program code validation  
A decision procedure for structured cryptographic protocols  
Unified OTP cryptosystem with authentication and secrecy  
A calculus for distributed firewall specification and verification  
A formal translation from an imperative language with array to a declarative language  
Verification of the lyee requirement  
Enhancing and parallelizing legacy software for medical imaging - a case study  
Towards autonomic computing: injecting self-organizing and self-healing properties into Java Programs  
A new way of automatic design of software (simulating human intentional activity)  
Towards developing adjustable software: a case study with the Lyee approach  
A framework for predicting person-effort on requirements changes  
FOOD: an intermediate model for automated refactoring  
Improving software test processes
