The impact of services on electronic commerce
Enterprise services architecture and semantic Web services
E-commerce and decision technologies: research opportunities and challenges
Recommenders for commerce, content, and community
The power of business processes in e-commerce
Design of progressive auctions for procurement based on Lagrangian relaxation
An auction mechanism for polynomial-time execution with combinatorial constraints

A framework for computing the outcome of proxied combinatorial auctions
An adaptive bilateral negotiation model for e-commerce settings
Negotiation support in online markets, with competition and co-operation
A flexible model for tree-structured multi-commodity markets
Truthful online auctions for pricing peer-to-peer services
An auction for scheduling delivery of highly demanded products
A novel auction mechanism for selling time-sensitive e-services

A clickstream-based collaborative filtering recommendation model for e-commerce
Koba4MS: selling complex products and services using knowledge-based recommender technologies
A recommender for targeted advertisement of unsought products in e-commerce
Cross enterprise business modeling with AC diagrams and workflow patterns
e-Business standardisation in the automotive industry - two approaches towards the integration of SMEs
Towards generic low payment mechanisms for decentralized task allocation: a learning based approach

Evaluating e-commerce cluster architectures using simulation
Query-by-object interface for information requirement elicitation in M-commerce
Enabling DRM-preserving digital content redistribution
Supporting eBusiness with a dictionary designed in a vertical standardisation perspective

Push concepts to control interactions in e-commerce
Collaborative gift registry in multi-channel retail commerce
Pareto-efficiency without giving-in: a two-phased protocol for multiple-attribute negotiations

Electronic trading in order-driven markets: efficient execution
Catalog-based purchasing: illustrating a quantitative approach to electronic commerce

The intelligent e-store: easy interactive product selection and comparison
Modeling cooperative business processes and transformation to a service oriented architecture
Using singular value decomposition approximation for collaborative filtering p. 257
An optimization model for the management of security risks in banking companies p. 266
TrustDavis : a non-exploitable online reputation system p. 274
The evolution of cooperation under cheap pseudonyms p. 284
Increasing user privacy in online transactions with X.509 v3 certificate private extensions and smartcards p. 293
Enabling persistent service links p. 301
Trustworthy e-mail using secure XML Web services p. 307
Supply chain protocolling p. 314
Unicursal supply chain management for extending traceability from ordering to distribution and settlement p. 322
A groves mechanism approach to decentralized design of supply chains p. 330
Creating value with interactive pricing mechanisms - a Web service-oriented architecture p. 339
A semantic Web based architecture for analytical tools p. 347
Policy-driven exception-management for composite Web services p. 355
Multi-attribute double auctions in financial trading p. 366
Framework for the negotiation of electronic contracts in e-business on demand p. 370
Automated contract negotiation using a mediation service p. 374
Managing supply chains of software as a service through agent negotiations p. 378
Design and development of an anthropocentric negotiation model p. 383
Implementing privacy negotiation techniques in e-commerce p. 387
Design of combinatorial auctions for allocation and procurement processes p. 391
Electronic contracts in negotiation support systems : challenges, design and implementation p. 396
A fuzzy trust model for e-commerce p. 401
sMART - a semantic matchmaking portal for electronic markets p. 405
Ranking-based business information processing : applications to business solutions and eCommerce systems p. 409
An innovative decision support system for bidding in simultaneous ascending auctions p. 414

Context-based integration of numerical information p. 418
EXSMAL : EDI/XML semi-automatic schema matching ALgorithm p. 422
Principles and algorithms of EMMIL marketplaces p. 426
Privacy enhanced electronic cheque system p. 431
Security and privacy using one-round zero-knowledge proofs p. 435
Promotional and commercial content distribution based on a legal and trusted P2P framework p. 439
Meta model based integration of role-based and discretionary access control using path expressions p. 443
Anonymity and security in public Internet forums p. 448
Secure efficient proxy blind signature schemes based DLP p. 452
HESSL (highly enhanced security socket layer) protocol p. 456
Design and evolution of e-business models p. 462
Ambient iCare e-services for quality aging: framework and roadmap  p. 467
Integration of business processes with autonomous information systems: a case study in government services  p. 471
Business rules integration in BPEL - a service-oriented approach  p. 476
Towards an integrated privacy framework for HIPAA-compliant Web services  p. 480
Semantic Web service composition in IRS-III: the structured approach  p. 484
Influence of ubiquitous computing on organizational structure  p. 489
Enhancing e-business-intelligence-service: a topic-guided text summarization framework  p. 493
An automatic electronic contract document signing system in a secure environment  p. 497
Software piracy prevention through digital rights management systems  p. 504
How pay-TV becomes e-commerce  p. 508
The access-usage-control-matrix: a heuristic tool for implementing a selected level of technical content protection  p. 512
Profiles for interoperability between MPEG-21 REL and OMA DRM  p. 518
Pervasive content access for mobile commerce  p. 523
An architecture for the management of smart cards by mobile devices using Java technologies  p. 527
Smart food: mobile guidance for food-allergic people  p. 531
Ambient e-service embracing model  p. 535
Contract-based cross-organizational automated processes  p. 540
Calculation of delay times for workflows with fixed-date constraints  p. 544
Synchronization among activities in a workflow using extended workflow Petri nets  p. 548
Implementing a RosettaNet business-to-business integration platform using J2EE and Web services  p. 553
A practical implementation of transparent encryption and separation of duties in enterprise databases: protection against external and internal attacks on databases  p. 559
A personalized product recommendation algorithm based on preference and intention learning  p. 566
Developing flexible service portals  p. 570
