

Supplemental Figure S7. Reporter EGFP mRNA levels. By 16 hr after transfection of HeLa Tet-off cells with either Ctrl. siRNA or AS-miR-24, along with plasmids pEGFP-p16 or pEGFP (described in Fig. 3E and in the Experimental Procedures section), EGFP and EGFP-p16 mRNA levels were measured by RT-qPCR analysis. Data are the means +SD from 3 independent experiments.
