

# **Bayesian Brain**

## **Probabilistic Approaches to Neural Coding**

Kenji Doya, Shin Ishii, Alexandre Pouget, and Rajesh P. N. Rao

The MIT Press  
Cambridge, Massachusetts  
London, England

# Contents

*Series Foreword*    ix

*Preface*    xi

## I Introduction    1

### 1 *A Probability Primer*

*Kenji Doya and Shin Ishii*    3

1.1 What Is Probability?    3

1.2 Bayes Theorem    6

1.3 Measuring Information    6

1.4 Making an Inference    8

1.5 Learning from Data    10

1.6 Graphical Models and Other Bayesian Algorithms    13

## II Reading Neural Codes    15

### 2 *Spike Coding*

*Adrienne Fairhall*    17

2.1 Spikes: What Kind of Code?    17

2.2 Encoding and Decoding    25

2.3 Adaptive Spike Coding    42

2.4 Summary    47

2.5 Recommended Reading    47

### 3 *Likelihood-Based Approaches to Modeling the Neural Code*

*Jonathan Pillow*    53

3.1 The Neural Coding Problem    53

3.2 Model Fitting with Maximum Likelihood    55

3.3 Model Validation    64

3.4 Summary    68

<b>4</b>	<b><i>Combining Order Statistics with Bayes Theorem for Millisecond-by-Millisecond Decoding of Spike Trains</i></b>	
	<i>Barry J. Richmond and Matthew C. Wiener</i>	<b>71</b>
4.1	Introduction	71
4.2	An Approach to Decoding	72
4.3	Simplifying the Order Statistic Model	82
4.4	Discussion	84
<b>5</b>	<b><i>Bayesian Treatments of Neuroimaging Data</i></b>	
	<i>Will Penny and Karl Friston</i>	<b>93</b>
5.1	Introduction	93
5.2	Attention to Visual Motion	94
5.3	The General Linear Model	95
5.4	Parameter Estimation	98
5.5	Posterior Probability Mapping	101
5.6	Dynamic Causal Modeling	104
5.7	Discussion	109
<b>III</b>	<b>Making Sense of the World</b>	<b>113</b>
<b>6</b>	<b><i>Population Codes</i></b>	
	<i>Alexandre Pouget and Richard S. Zemel</i>	<b>115</b>
6.1	Introduction	115
6.2	Coding and Decoding	116
6.3	Representing Uncertainty with Population Codes	120
6.4	Conclusion	127
<b>7</b>	<b><i>Computing with Population Codes</i></b>	
	<i>Peter Latham and Alexandre Pouget</i>	<b>131</b>
7.1	Computing, Invariance, and Throwing Away Information	131
7.2	Computing Functions with Networks of Neurons: A General Algorithm	132
7.3	Efficient Computing; Qualitative Analysis	136
7.4	Efficient Computing; Quantitative Analysis	137
7.5	Summary	142
<b>8</b>	<b><i>Efficient Coding of Visual Scenes by Grouping and Segmentation</i></b>	
	<i>Tai Sing Lee and Alan L. Yuille</i>	<b>145</b>
8.1	Introduction	145
8.2	Computational Theories for Scene Segmentation	148
8.3	A Computational Algorithm for the Weak-Membrane Model	152
8.4	Generalizations of the Weak-Membrane Model	156
8.5	Biological Evidence	161
8.6	Summary and Discussion	180

**9 Bayesian Models of Sensory Cue Integration***David C. Knill*     **189**

- 9.1 Introduction     189
- 9.2 Psychophysical Tests of Bayesian Cue Integration     191
- 9.3 Psychophysical Tests of Bayesian Priors     195
- 9.4 Mixture models, Priors, and Cue Integration     199
- 9.5 Conclusion     204

**IV Making Decisions and Movements     207****10 The Speed and Accuracy of a Simple Perceptual Decision: A Mathematical Primer***Michael N. Shadlen, Timothy D. Hanks, Anne K. Churchland, Roozbeh Kiani, and Tianming Yang*     **209**

- 10.1 Introduction     209
- 10.2 The Diffusion-to-Bound Framework     210
- 10.3 Derivation of Choice and Reaction Time Functions     213
- 10.4 Implementation of Diffusion-to-Bound Framework in the Brain     226
- 10.5 Conclusions     233

**11 Neural Models of Bayesian Belief Propagation***Rajesh P. N. Rao*     **239**

- 11.1 Introduction     239
- 11.2 Bayesian Inference through Belief Propagation     240
- 11.3 Neural Implementations of Belief Propagation     244
- 11.4 Results     248
- 11.5 Discussion     258

**12 Optimal Control Theory***Emanuel Todorov*     **269**

- 12.1 Discrete Control: Bellman Equations     270
- 12.2 Continuous Control: Hamilton-Jacobi-Bellman Equations     273
- 12.3 Deterministic Control: Pontryagin's Maximum Principle     277
- 12.4 Linear-Quadratic-Gaussian Control: Riccati Equations     283
- 12.5 Optimal Estimation: Kalman Filter     287
- 12.6 Duality of Optimal Control and Optimal Estimation     290
- 12.7 Optimal Control as a Theory of Biological Movement     294

<b>13</b>	<b><i>Bayesian Statistics and Utility Functions in Sensorimotor Control</i></b>	
	<i>Konrad P. Körding and Daniel M. Wolpert</i>	<b>299</b>
13.1	Introduction	299
13.2	Motor Decisions	301
13.3	Utility: The Cost of Using our Muscles	308
13.4	Neurobiology	314
13.5	Discussion	316
