# Features (Emoticons)

Emoticon use: avg #emoticon per tweet

fraction of positive/negative

Emoticons dictionary: 78 positive and 57 negative

# Features (length)

average word length

average tweet length

number of large words

average word length greater than 6 or not?

# Features (spelling)

fraction of misspelled words

List of common misspelling wikipedia

# Features (Punctuation)

fraction of tweets containing at least one ?

fraction of tweets containing at least one !

# Features (Elongation)

common phenomenon on Twitter

like coooooool! shows intensification and

informality

fraction of words that a user elongate

# Features (mention & RT)

level of engagement

fraction of user's tweets that are retweet

fraction of tweets that are addressed to other users

level of engagement

fraction of user's tweets that are retweet

fraction of tweets that are addressed to other users

# Classification Task

Support Vector Machine and Linear Regression

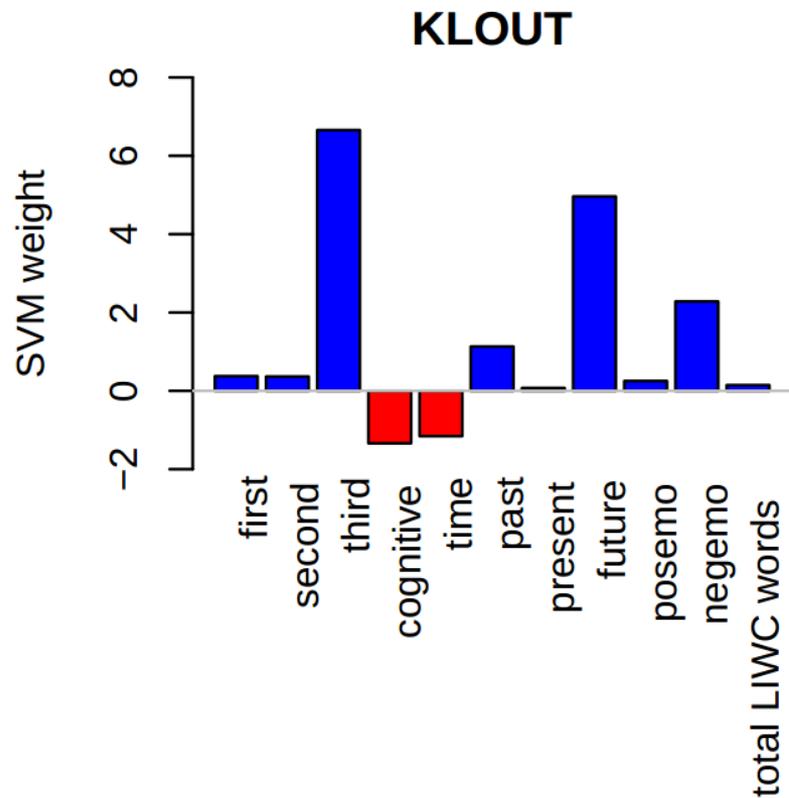

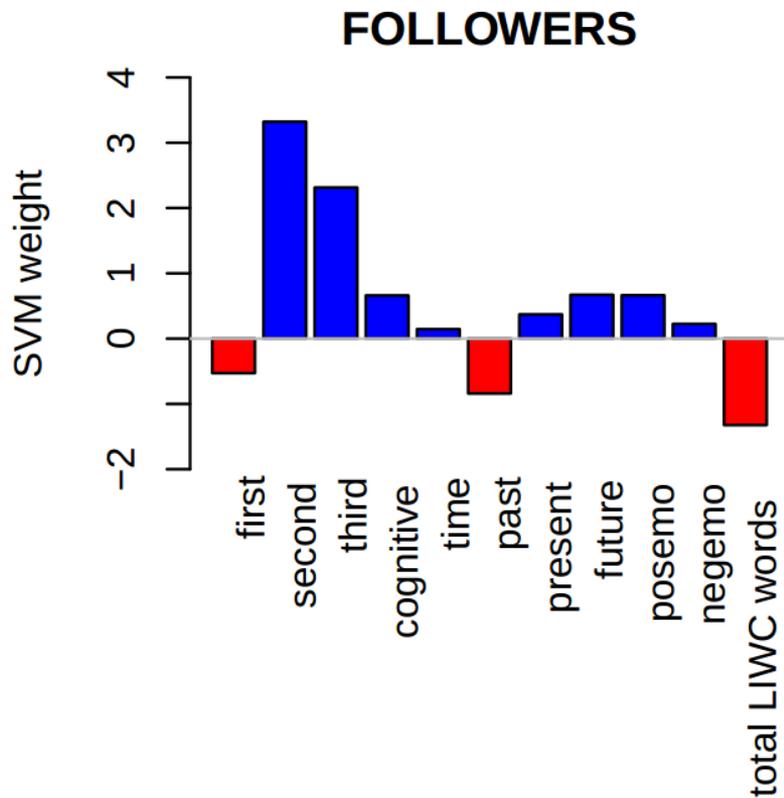

separate classifier for each set of features

10-fold cross validation

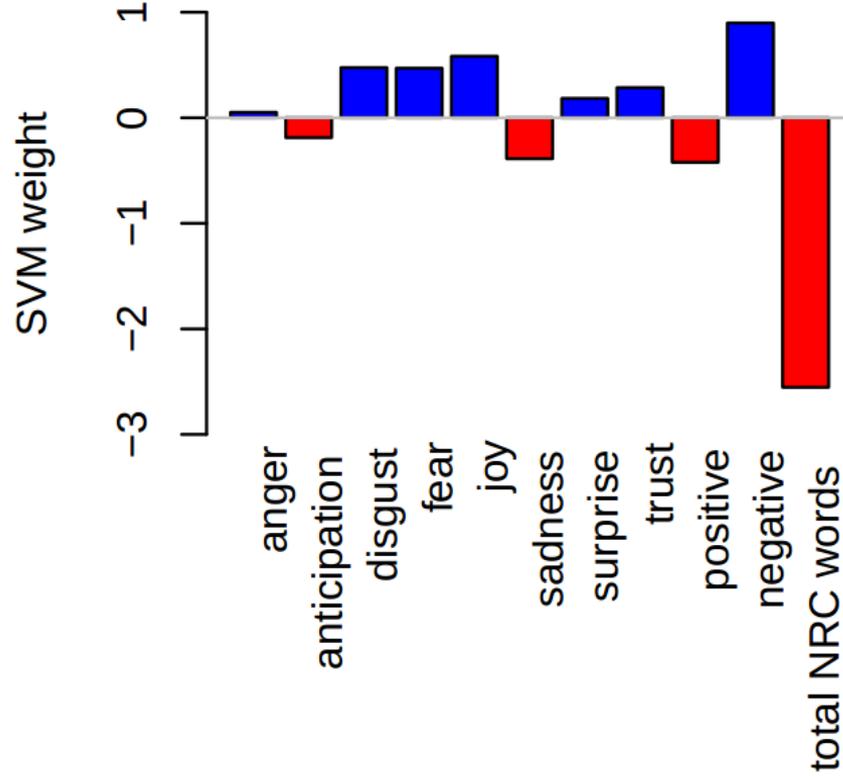

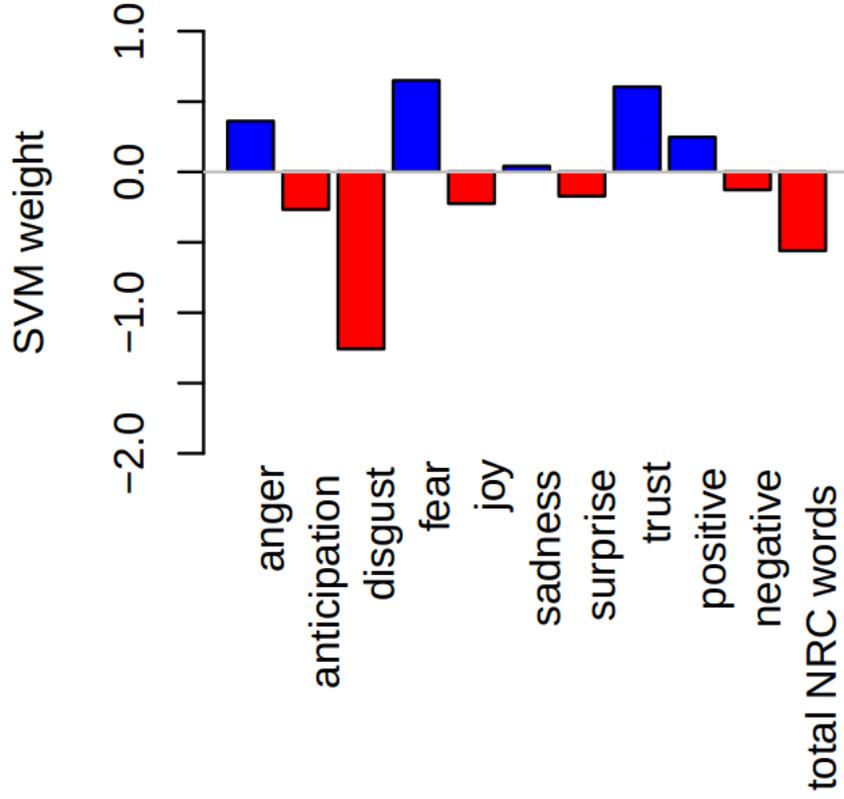

# Classification Result

# Cross Validation

121,823 Facebook users

5.97 message per user

60% accuracy

# Conversation prediction

in a dyadic conversation

predict which of the two users is more popular

# Dataset

Nov 2012 to Feb 2013 random sample of users

construct conversation using reply-to information

2,158 conversation between 1,511 users

sample of additional tweets for each user

# Features

**conversation start:** which user started the conversation

**deviation:** how much x deviates from his usual way of writing when talking to y

**Echoing:** whether x uses words for the first time after y has used it

# Classification Task

Support Vector Machine

10-fold cross validation

different classifiers per features

# Classification Result

	Feature Set	Accuracy
	Baseline	50.00
(1)	style deviation	56.88**
(2)	emotion deviation	53.68**
(3)	word choice deviation	<b>71.56***</b>
(4)	style echoing	48.96*
(5)	emotion echoing	50.07*
(6)	word choice echoing	49.28
(7)	conversation start	58.27***
(8)	unigrams	53.96*
(9)	NRC	51.64
(10)	LIWC	50.35
(11)	emoticons	49.98
(12)	tweet and word length	53.50
(13)	spelling	49.70
(14)	word elongation	48.49
(15)	punctuation	47.34
(16)	All features	71.33***

# Classification Result

conversation prediction is a difficult task

deviation is a good feature but echoing not!
