Computational Matrix Analysis

Alan J. Laub

Using an approach that its author calls "matrix analysis for grown-ups," this new textbook introduces fundamental concepts of numerical linear algebra and their application to solving certain numerical problems arising in state-space control and systems theory. It provides readers with a one-semester introduction to numerical linear algebra; an introduction to statistical condition estimation in book form for the

first time; and an overview of certain computational problems in control and systems theory.

Introduction to Optimization and Semidifferential Calculus

Michel Delfour

MOS-SIAM Series on Optimization 12

This primarily undergraduate textbook focuses on finite-dimensional optimization.

It offers an original and well integrated treatment of semidifferential calculus and optimization, with an emphasis on the Hadamard subdifferential. The book also includes complete definitions, theorems, and detailed proofs, along with commentaries that put the subject into historical perspective and numerous examples and exercises throughout each chapter, with answers to the exercises provided in an appendix.

Spectral Numerical Weather Prediction Models

Martin Ehrendorfer

This book provides a comprehensive overview of numerical weather prediction (NWP) focusing on the application of the spectral method in NWP models. The author illustrates the use of the spectral method in theory as well as in its application to building a full prototypical spectral NWP model, from the formulation of continuous model equations through development of their discretized forms to coded statements of the model. The book provides readers with information necessary to construct spectral NWP models; a self-contained, well-documented, coded spectral NWP model; and theoretical and practical exercises, some of which include solutions.

Nonlinear Water Waves with Applications to Wave-Current Interactions and Tsunamis

Adrian Constantin

CBMS-NSF Regional Conference Series in Applied Mathematics 81

This overview of some of the main results and recent developments in nonlinear water waves presents fundamental aspects of the field and discusses several important topics of current research interest. It contains selected information about water-wave motion for which advanced mathematical study can be pursued.

Essays in Linear Algebra

Gilbert Strang

Wellesley-Cambridge Press 11

This book brings together 27 classic articles by Gilbert Strang on linear algebra, computational science, applied mathematics, and calculus, each introduced by a new essay. The essays present historical background, the current state, and unsolved problems.

2012 • x + 342 pages • Hardcover • ISBN 978-0-9802327-6-9
