Preface	11
What's New in the Fifth Edition	15
List of Materials Available on www.benn.net	16
About the Authors	17
I Introduction to Discrete-Event System Simulation	19
1 Introduction to Simulation	21
1.1 When Simulation Is the Appropriate Tool	22
1.2 When Simulation Is Not Appropriate	22
1.3 Advantages and Disadvantages of Simulation	23
1.4 Areas of Application	25
1.5 Some Recent Applications of Simulation	27
1.6 Systems and System Environment	30
1.7 Components of a System	30
1.8 Discrete and Continuous Systems	32
1.9 Model of a System	33
1.10 Types of Models	33
1.11 Discrete-Event System Simulation	34
1.12 Steps in a Simulation Study	34
References	39
Exercises	40
2 Simulation Examples in a Spreadsheet	42
2.1 The Basics of Spreadsheet Simulation	43
2.1.1 How to Simulate Randomness	43

2.1.2	The Random Generators Used in the Examples	45
2.1.3	How to Use the Spreadsheets	46
2.1.4	How to Simulate a Coin Toss	47
2.1.5	How to Simulate a Random Service Time	48
2.1.6	<i>How to Simulate a Random Arrival Time</i>	51
2.1.7	A Framework for Spreadsheet Simulation	53
2.2	A Coin Tossing Game	55
2.3	Queueing Simulation in a Spreadsheet	58
2.3.1	Waiting Line Models	59
2.3.2	<i>Simulating a Single-Server Queue</i>	63
2.3.3	Simulating a Queue with Two Servers	69
2.4	Inventory Simulation in a Spreadsheet	73
2.4.1	Simulating the News Dealer's Problem	75
2.4.2	Simulating an (M,N) Inventory Policy	79
2.5	Other Examples of Simulation	83
2.5.1	Simulation of a Reliability Problem	83
2.5.2	Simulation of Hitting a Target	86
2.5.3	Estimating the Distribution of Lead-Time Demand	89
2.5.4	Simulating an Activity Network	91
2.6	Summary	94
	References	95
	Exercises	96
3	General Principles	106
3.1	Concepts in Discrete-Event Simulation	107
3.1.1	The Event Scheduling/Time Advance Algorithm	110
3.1.2	World Views	114
3.1.3	Manual Simulation Using Event Scheduling	116
3.2	List Processing	126
3.2.1	Basic Properties and Operations Performed on Lists	127
3.2.2	<i>Using Arrays for List Processing</i>	128
3.2.3	Using Dynamic Allocation and Linked Lists	130
3.2.4	Advanced Techniques	132
3.3	Summary	132
	References	133
	Exercises	133
4	Simulation Software	135
4.1	History of Simulation Software	136
4.1.1	The Period of Search (1955–1960)	137
4.1.2	The Advent (1961–1965)	137
4.1.3	The Formative Period (1966–1970)	137
4.1.4	The Expansion Period (1971–1978)	138

4.1.5	The Period of Consolidation and Regeneration (1979–1986)	138
4.1.6	The Period of Integrated Environments (1987–2008)	139
4.1.7	The Future (2009–2011)	139
4.2	Selection of Simulation Software	140
4.3	An Example Simulation	144
4.4	Simulation in Java	144
4.5	Simulation in GPSS	155
4.6	Simulation in SSF	159
4.7	Simulation Environments	163
4.7.1	AnyLogic	164
4.7.2	Arena	165
4.7.3	AutoMod	166
4.7.4	Enterprise Dynamics	167
4.7.5	ExtendSim	167
4.7.6	Flexsim	168
4.7.7	ProModel	169
4.7.8	SIMUL8	169
4.8	Experimentation and Statistical-Analysis Tools	170
4.8.1	Common Features	170
4.8.2	Products	170
	References	173
	Exercises	174

II Mathematical and Statistical Models 187

5	Statistical Models in Simulation	189
5.1	Review of Terminology and Concepts	190
5.1.1	Discrete random variables	190
5.1.2	Continuous random variables	191
5.1.3	Cumulative distribution function	193
5.1.4	Expectation	195
5.1.5	The mode	197
5.2	Useful Statistical Models	197
5.2.1	Queueing systems	197
5.2.2	Inventory and supply-chain systems	200
5.2.3	Reliability and maintainability	201
5.2.4	Limited data	201
5.2.5	Other distributions	201
5.3	Discrete Distributions	201
5.3.1	Bernoulli trials and the Bernoulli distribution	201
5.3.2	Binomial distribution	202
5.3.3	Geometric and Negative Binomial distributions	204
5.3.4	Poisson distribution	205

5.4	Continuous Distributions	207
5.4.1	Uniform distribution	207
5.4.2	Exponential distribution	209
5.4.3	Gamma distribution	212
5.4.4	Erlang distribution	213
5.4.5	Normal distribution	215
5.4.6	Weibull distribution	222
5.4.7	Triangular distribution	224
5.4.8	Lognormal distribution	227
5.4.9	Beta distribution	228
5.5	Poisson Process	229
5.5.1	Properties of a Poisson Process	231
5.5.2	Nonstationary Poisson Process	232
5.6	Empirical Distributions	234
5.7	Summary	236
	References	237
	Exercises	237
6	Queueing Models	245
6.1	Characteristics of Queueing Systems	246
6.1.1	The Calling Population	247
6.1.2	System Capacity	240
6.1.3	The Arrival Process	248
6.1.4	Queue Behavior and Queue Discipline	250
6.1.5	Service Times and the Service Mechanism	250
6.2	Queueing Notation	252
6.3	Long-Run Measures of Performance of Queueing Systems	253
6.3.1	Time-Average Number in System L	253
6.3.2	Average Time Spent in System Per Customer w	255
6.3.3	The Conservation Equation: $L = \lambda w$	257
6.3.4	Server Utilization	258
6.3.5	Costs in Queueing Problems	268
6.4	Steady-State Behavior of Infinite-Population Markovian Models	265
6.4.1	Single-Server Queues with Poisson Arrivals and Unlimited Capacity: $M/G/1$	266
6.4.2	Multiserver Queue: $M/M/c/\infty/\infty$	271
6.4.3	Multiserver Queues with Poisson Arrivals and Limited Capacity: $M/M/c/N/\infty/276$	276
6.5	Steady-State Behavior of Finite-Population Models ($M/M/c/K/K$)	278
6.6	Networks of Queues	281
6.7	Rough-cut Modeling: An Illustration	283
6.8	Summary	285
	References	286
	Exercises	286

III	Random Numbers	293
7	Random-Number Generation	295
7.1	Properties of Random Numbers	295
7.2	Generation of Pseudo-Random Numbers	296
7.3	Techniques for Generating Random Numbers	297
7.3.1	Linear Congruential Method	298
7.3.2	Combined Linear Congruential Generators	301
7.3.3	Random-Number Streams	303
7.4	Tests for Random Numbers	304
7.4.1	Frequency Tests	305
7.4.2	Tests for Autocorrelation	309
7.5	Summary	312
	References	312
	Exercises	313
8	Random-Variate Generation	317
8.1	Inverse-Transform Technique	318
8.1.1	Exponential Distribution	318
8.1.2	Uniform Distribution	321
8.1.3	Weibull Distribution	323
8.1.4	Triangular Distribution	323
8.1.5	Empirical Continuous Distributions	324
8.1.6	Continuous Distributions without a Closed-Form Inverse	329
8.1.7	Discrete Distributions	330
8.2	Acceptance-Rejection Technique	332
8.2.1	Poisson Distribution	334
8.2.2	Nonstationary Poisson Process	339
8.2.3	Gamma Distribution	340
8.3	Special Properties	341
8.3.1	Direct Transformation for the Normal and Lognormal Distributions	342
8.3.2	Convolution Method	343
8.3.3	More Special Properties	345
8.4	Summary	345
	References	345
	Exercises	346
IV	Analysis of Simulation Data	351
9	Input Modeling	353
9.1	Data Collection	354
9.2	Identifying the Distribution with Data	359
9.2.1	Histograms	359

9.2.2	Selecting the Family of Distributions	362
9.2.3	Quantile-Quantile Plots	365
9.3	Parameter Estimation	368
9.3.1	Preliminary Statistics: Sample Mean and Sample Variance	368
9.3.2	Suggested Estimators	370
9.4	Goodness-of-Fit Tests	376
9.4.1	Chi-Square Test	377
9.4.2	Chi-Square Test with Equal Probabilities	379
9.4.3	Kolmogorov–Smirnov Goodness-of-Fit Test	381
9.4.4	p -Values and “Best Fits”	383
9.5	Fitting a Nonstationary Poisson Process	384
9.6	Selecting Input Models without Data	385
9.7	Multivariate and Time-Series Input Models	387
9.7.1	Covariance and Correlation	388
9.7.2	Multivariate Input Models	388
9.7.3	Time-Series Input Models	390
9.7.4	The Normal-to-Anything Transformation	392
9.8	Summary	394
	References	396
	Exercises	397
10	Verification, Calibration, and Validation of Simulation Models	406
10.1	Model Building, Verification, and Validation	407
10.2	Verification of Simulation Models	408
10.3	Calibration and Validation of Models	413
10.3.1	Face Validity	414
10.3.2	Validation of Model Assumptions	415
10.3.3	Validating Input-Output Transformations	415
10.3.4	Input-Output Validation: Using Historical Input Data	4426
10.3.5	Input-Output Validation: Using a Turing Test	430
10.4	Summary	431
	References	432
	Exercises	433
11	Estimation of Absolute Performance	435
11.1	Types of Simulations with Respect to Output Analysis	436
11.2	Stochastic Nature of Output Data	439
11.3	Absolute Measures of Performance and Their Estimation	441
11.3.1	Point Estimation	441
11.3.2	Confidence-Interval Estimation	443
11.4	Output Analysis for Terminating Simulations	445
11.4.1	Statistical Background	445
11.4.2	Confidence Intervals with Specified Precision	449
11.4.3	Quantiles	451

11.4.4	Estimating Probabilities and Quantiles from Summary Data	452
11.5	Output Analysis for Steady-State Simulations	453
11.5.1	Initialization Bias in Steady-State Simulations	454
11.5.2	Error Estimation for Steady-State Simulation	458
11.5.3	Replication Method for Steady-State Simulations	462
11.5.4	Sample Size in Steady-State Simulations	466
11.5.5	Batch Means Method for Steady-State Simulations	467
11.5.6	Steady-State Quantiles	470
11.6	Summary	471
	References	472
	Exercises	473
12	Estimation of Relative Performance	481
12.1	Comparison of Two System Designs	482
12.1.1	Independent Sampling	485
12.1.2	Common Random Numbers (CRN)	486
12.1.3	Confidence Intervals with Specified Precision	492
12.2	Comparison of Several System Designs	493
12.2.1	Bonferroni Approach to Multiple Comparisons	494
12.2.2	Selection of the Best	496
12.3	Metamodeling	501
12.3.1	Simple Linear Regression	501
12.3.2	Metamodeling and Computer Simulation	507
12.4	Optimization via Simulation	509
12.4.1	What Does “Optimization via Simulation” Mean?	510
12.4.2	Why is Optimization via Simulation Difficult?	512
12.4.3	Using Robust Heuristics	513
12.4.4	An Illustration: Random Search	516
12.5	Summary	518
	References	519
	Exercises	520
V	Applications	525
13	Simulation of Manufacturing and Material-Handling Systems	527
13.1	Manufacturing and Material-Handling Simulations	528
13.1.1	Models of Manufacturing Systems	528
13.1.2	Models of Material Handling Systems	530
13.1.3	Some Common Material-Handling Equipment	530
13.2	Goals and Performance Measures	532
13.3	Issues in Manufacturing and Material-Handling Simulations	533
13.3.1	Modeling Downtimes and Failures	533
13.3.2	Trace-Driven Models	537

13.4	Case Studies of the Simulation of Manufacturing and Material Handling	538
13.5	Manufacturing Example: An Assembly-line Simulation	541
	13.5.1 System Description and Model Assumptions	541
	13.5.2 Presimulation Analysis	544
	13.5.3 Simulation Model and Analysis of the Designed System	545
	13.5.4 Analysis of Station Utilization	545
	13.5.5 Analysis of Potential System Improvements	546
	13.5.6 Concluding Words: The Gizmo Assembly-Line Simulation	548
13.6	Summary	548
	References	548
	Exercises	549
14	Simulation of Networked Computer Systems	559
14.1	Introduction	560
14.2	Simulation Tools	562
	14.2.1 Process Orientation	564
	14.2.2 Event Orientation	566
14.3	Model Input	567
	14.3.1 Modulated Poisson Process	568
	14.3.2 Poisson-Pareto Process	569
	14.3.3 Pareto-length Phase Time	573
	14.3.4 WWW Traffic	575
14.4	Mobility Models in Wireless Systems	576
14.5	The OSI Stack Model	578
14.6	Physical Layer in Wireless Systems	580
	14.6.1 Propagation Models	580
	14.6.2 Determining the Receivers	586
14.7	Media Access Control	587
	14.7.1 Token-Passing Protocols	587
	14.7.2 Ethernet	591
14.8	Data Link Layer	593
14.9	TCP	594
14.10	Model Construction	601
	14.10.1 Construction	601
	14.10.2 DML Example	602
14.11	Summary	605
	References	606
	Exercises	607
Appendix		609
