2014 Tenth International Conference on Intelligent Information Hiding and Multimedia Signal Processing

(IIH-MSP 2014)

Kitakyushu, Japan
27-29 August 2014
Table of Contents

Session 1: Cross-Discipline Techniques in Signal Processing and Networking

Design of Triple Symmetric Arms Dipole Antenna for 900/1800/2450 MHz Applications ..................................................................................................................1
   Yuh-Yih Lu, Jun-Yi Guo, and Hsiang-Cheh Huang

Error-Control for Compressed Sensing of Images with Multi-channel Transmission .........................................................................................................................5
   Hsiang-Cheh Huang, Ting-Hsuan Wang, and Feng-Cheng Chang

Analysis and Simulation of Theme Park Queuing System .................................................................................................................................9
   Liou Chu, Fu-Yi Hung, and Yen-Cheng Lu

Enhanced Difference Alteration with Weighted Averages for Reversible Data Hiding ...............................................................................................................13
   Hsiang-Cheh Huang, Chuan-Chang Lin, Yuh-Yih Lu, and Yueh-Hong Chen

Discussions on Implementing Iterative Hard Thresholding Algorithm ..................................................................................................................17
   Feng-Cheng Chang and Hsiang-Cheh Huang

Reversible Image Watermarking Based on Genetic Algorithm .................................................................................................................................21
   Yueh-Hong Chen and Hsiang-Cheh Huang
Session 2: Ergonomic Information and Control Systems

Data Glove Embedded with 6-DOF Inertial Sensors for Hand Rehabilitation ..................................................25
  Bor-Shing Lin, I-Jung Lee, Pei-Chi Hsiao, I-Jung Lee, Shu-Yu Yang, and Willy Chou

A Prototype Design of a Continuous and Real-Time Wireless Urine Monitoring System .................................................................29
  Yung-Tsung Cheng, Jiun-Hung Lin, and Cheng-Chi Tai

Design of Wearable Brain Computer Interface Based on Motor Imagery .................................................................33
  Chuan-Lung Lin, Tso-Yao Chu, Pei-Jung Wu, Chen-An Wang, and Bor-Shyh Lin

Wireless Surface Electromyography Monitoring System for Dysphagia Evaluation .................................................................37
  Chih-Jen Cheng, Chien-Zhi Ou, Zu-Po Yang, and Bor-Shyh Lin

Session 3: IPv6 Applications and Services

Building an IPv6 Virtual Lab with the Multi-level Training Mechanism .................................................................41
  Shian-Shyong Tseng, Ching-Heng Ku, Ai-Chin Lu, Jun-Ming Su, and Geng-Da Tsai

An Enhancement of IPv4-in-IPv6 Mechanism ........................................................................................................45
  N. Chuangchunsong, S. Kamolphiwong, T. Kamolphiwong, and R. Elz

A Light-Weight Penetration Test Tool for IPv6 Threats .........................................................................................49
  Gu-Hsin Lai

The Implementation of IPv6-Enabled Locators for Location-Based Smart Marketing Service .................................................................53
  Tseng-Yi Chen, Fan-Hsun Tseng, Nen-Fu Huang, Wei-Kuan Shih, Han-Chieh Chao, and Li-Der Chou

  Wen-Yen Lin, Kuang-Po Hsueh, Wang-Hsin Hsu, Liew-Gha Yie, and Wei-Chen Tai

Ontology-Based Anti-threat Decision Support System for IPv4/IPV6 .............................................................................61
  Shian-Shyong Tseng, Jui-Feng Weng, Li-Ling Hu, and Hsu Nai-Wen

Session 4: Multimedia Services and Security

Robust Color Image Watermarking Approach Based on Shape-Specific Points .................................................................65
  Ching-Yu Yang and Wen-Fong Wang

A Reversible Data Hiding Method Using Inverse S-Scan Order and Histogram Shifting .................................................................69
  Yung-Chen Chou, Guo-Hao Huang, Huang-Ching Lee, and Ke-Jhen Lin

A Web API Aggregation Service for Mobile Mashup Applications .............................................................................73
  Hung-Yu Lin and Jiung-Long Huang
Ubiquitous Multimedia Services in Home-Based Context-Aware Environments ............................................77
    Chih-Lin Hu, Cheng-Lun Lin, Hung-Tsung Huang, Yi-Yu Su, and Pin-Chuan Liu
14-ms-Group-Delay and Low-Complexity Algorithm Design of 18-Band Quasi-ANSI S1.11 1/3 Octave Filter Bank for Digital Hearing Aids .................................................................81
    Shin-Chi Lai, Chih-Hao Liu, Ling-Yi Wang, and Sheau-Fang Lei
Low-Complexity Algorithm of Recursive Analysis and Synthesis Quadrature Mirror Filterbanks for Digital Radio Mondiale ..................................................................................85
    An-Kai Li, Shin-Chi Lai, Wen-Kai Tsai, and Sheau-Fang Lei
A Novel Turtle Shell Based Scheme for Data Hiding ..........................................................89
    Ching-Chun Chang, Yanjun Liu, and Thai-Son Nguyen

Session 5: Intelligent and Multimedia Computing for Real-Life Applications
Comments on Chaotic Maps-Based Password-Authenticated Key Agreement Using Smart Cards .......................................................................................................................94
    Ya-Fen Chang, Wei-Liang Tai, Wei-Na Wu, Wei-Han Li, and Yung-Chi Chen
An ID-Based User Authentication Scheme for Cloud Computing ...............................................98
    Jen-Ho Yang and Pei-Yu Lin
Analysis of Passenger Flow in Airport Terminal ........................................................................102
    Ping-Nan Chiang and Kevin Taaffe
A QR Code-Based on-Street Parking Fee Payment Mechanism ..................................................106
    Wen-Chuan Wu
An Image Hiding Method by Applying Tree Structure on Linking Pixels .........................................110
    Chi-Shiang Chan, Yi-Hui Chen, and Pei-Yu Lin
An Optimal Modification BTC Scheme Based on Binary Search Tree ........................................114
    Chia-Chen Lin, Xiao-Long Liu, Jian-Jie Zhou, and Shyan-Ming Yuan
An Instantiation of the Multiple-Transfer Framework to Reduce Efforts in Context Model Learning for New Users in Smart Homes ........................................................................118
    Ching-Hu Lu and Yi-Ting Chiang

Session 6: Security and Privacy in Computer Forensics Applications
A Webpage Data Hiding Method by Using Tag and CSS Attribute Setting ......................................122
    Yung-Chen Chou and Hsin-Chi Liao
An Efficient and Simplified Data Hiding Technique Based on 2’s Complement ............................126
    Tzu-Chuen Lu, Chun-Ya Tseng, Chang-Mu Chen, Hui-Shih Leng, and Ying-Hsuan Huang
Tampering Detection and Content Recovery for Digital Images Using Halftone Mechanism ................................................................. 130
   Shanshan Yang, Chuan Qin, Zhenxing Qian, and Boqing Xu

Novel Image Authentication Scheme for AMBTC-Compressed Images .................................................. 134
   Chia-Chen Lin, Yuehong Huang, and Wei-Liang Tai

A Novel Reversible Data Hiding Scheme Using Ripple Strategy and Histogram Shifting ................................................................. 138
   Yung-Chen Chou, Huang-Ching Lee, and Yong-Jin Yu

Data Hiding Scheme Based on Edge Detection and Triangular Mirroring ................................................. 142
   Tzu-Chuen Lu, Chun-Ya Tseng, Hui-Shih Leng, and Chun-Chih Huang

Transmissions for Delay-Guaranteed Information Using Smart Antenna Systems ......................................................... 146
   Li-Ling Hung, Yu-Wei Huang, and Sheng-Han Wu

Session 7: Information Applications

An Automatic Chinese Font Library Generation Method by Modifying Vector Contour Curves ................................................................. 150
   Wenfa Qi, Yuxin Liu, and Wei Guo

The Adaptive Recommendation Segment Mechanism to Reduce Traffic Congestion in Smart City ................................................................. 155
   Gwo-Jiun Horng

Elimination of Matching Digital Images to Identify Objective Measures of Quality ................................................................. 159
   Jakub Peksinski, Grzegorz Mikolajczak, and Janusz Pawel Kowalski

On Extreme Learning Machine for Watermarking of an Images in Discrete Wavelet Transform Domain ................................................................. 163
   Ram Pal Singh, Neelam Dabas, Anurag Mishra, and Vikash Cahudhary

Analyzing Item Features for Cold-Start Problems in Recommendation Systems ................................................................. 167
   Soryoung Kim, Sang-Min Choi, Yo-Sub Han, Ka Lok Man, and Kaiyu Wan

A Hybrid Multi-functions Digital Public Address System with Earthquake Early Warning ................................................................. 171
   Chung-Heng Chuang, Tsung-Hsing Lin, Liang-Bi Chen, Tung-Lin Lee, Chaio-Hsuan Chuang, Katherine Shi-Min Li, Chih-Lin Hung, and Chao-Wen Wu

A Known-Key Scenario for Steganalysis and a Highly Accurate Detector within It ................................................................. 175
   Viktor Monarev and Andrey Pestunov
The K-Means Clustering Methods Applied in the Message Scheduling Methods of Flexray Communication Network Based on the Embedded Flexray Node ..................................................................................................................... 179

Yung-Hoh Sheu, Zuo-Wen Wang, and Yao-Jhong Liou

Session 8: Multimedia Signal Processing and Network Technology I

Semantic Vocabulary Cognition Model for the Improvement of Automatic Image Annotation ............................................................................................................................................. 183

Zhonghua Sun and Kebin Jia

Optimization for I-Frame Based on Residual Image ................................................................................................................................. 187

Yuan Gao, Pengyu Liu, and Kebin Jia

A Water Environment Security Monitoring Algorithm Based on Intelligent Video Surveillance ............................................................................................................................................................................. 191

Zihan Pang, Kebin Jia, and Jinchao Feng

Research Progress of Obstacle Detection Based on Monocular Vision ................................................................................................................................. 195

Qiang Wu, Jie Wei, and Xuwen Li

Stereo Matching Algorithm of Color Image Based on Weber's Law and Census ................................................................................................................................. 199

Qiang Wu, Xiangnan Zhao, and Xuwen Li

Modification of Disparity Vector Derivation from Neighbouring Blocks in 3D-HEVC ............................................................................................................................................. 203

Yuxin Song and Kebin Jia

The PCA-Demons Algorithm for Medical Image Registration ................................................................................................................................. 207

Liya Zhao and Kebin Jia

A Deep Structure for Facial Expression Recognition under Partial Occlusion ................................................................................................................................. 211

Yue Cheng, Bin Jiang, and Kebin Jia

Session 9: Multimedia Signal Processing and Network Technology II

Flexible Quantum Image Secret Sharing Based on Measurement and Strip ................................................................................................................................. 215

Xianhua Song, Shen Wang, Jianzhi Sang, Xuehu Yan, and Xiamu Niu

An FPGA-Based Design of Efficient QKD Sifting Module ................................................................................................................................. 219

Qiong Li, Zhibin Lin, Dan Le, and Hucheng Liu

Equivalence Proof of Two (2, n) Progressive Visual Secret Sharing ................................................................................................................................. 223

Xuehu Yan, Shen Wang, and Xiamu Niu

An FPGA-Based Communication Scheme of Classical Channel in High-Speed QKD System ................................................................................................................................. 227

Qiong Li, Siyou Ma, Haokun Mao, and Lin Meng
Spam Detection Approach Based on C-Support Vector Machine and Kernel Principal-Component Analysis ..................................................................................................................231  
  
  Shu Geng, Liu Lv, and Rongjun Liu

A Method to Generate Random Number for Cryptographic Application ..........................................................235  
  
  Xiamu Niu, Yongting Wang, and Di Wu

A Novel Finger Vein Image Quality Evaluation Method Based on Triangular Norm ..............................................................239  
  
  Jialiang Peng, Qiong Li, and Xiamu Niu

A Novel Real-Time Aeromagnetic Compensation Method Based on RLSQ ..............................................................243  
  
  Zhenjia Dou, Kexin Ren, Qi Han, and Xiamu Niu

Perceptual Image Hashing for DIBR 3D Images Based on Ring Partition and SIFT Feature Points ..............................................................247  
  
  Chen Cui, Shen Wang, and Xiamu Niu

Session 10: Recent Advances in Information Hiding and Enrichment Technologies for Audio and Speech Signals

Gender-Dependent Babble Maskers Created from Multi-speaker Speech for Speech Privacy Protection ..............................................................251  
  
  Kazuhiro Kondo and Hiroki Sakurai

Encoding Data by Frequency Modulation of a High-Low Siren Emitted by an Emergency Vehicle ..............................................................255  
  
  Akira Nishimura

Robust Audio Information Hiding Based on Stereo Phase Difference in Time-Frequency Domain ..............................................................260  
  
  Nobutaka Ono

Secure Speech Encryption System Using Segments for Speech Synthesis ..............................................................264  
  
  Minoru Kohata

An Audio Watermarking Method Using Pitch-Transformed Sound of Original Music ..............................................................268  
  
  Harumi Murata and Akio Ogihara

Hybrid Speech Watermarking Based on Formant Enhancement and Cochlear Delay ..............................................................272  
  
  Shengbei Wang and Masashi Unoki

A Novel Reversible Data Hiding Scheme Based on Reference Pixels and Adaptive Block Selection ..............................................................276  
  
  Xinlu Gui, Siren Cai, Xiaolong Li, and Bin Yang
Session 11: Intelligent Video Processing

Moving-Object Intrusion Detection Based on Retinex-Enhanced Method ..................................................281
   Chao-Ho Chen, Tsong-Yi Chen, Yu-Chun Lin, and Wu-Chih Hu

HDR Enhancement Based on Bi-curve Mapping for Image Sequences .....................................................285
   Tsong-Yi Chen, Chao-Ho Chen, Tzu-Feng Tseng, Guan-Ming Luo, and Wu-Chih Hu

An Efficient Method for Sweep Coverage with Minimum Mobile Sensor ..................................................289
   Bing-Hong Liu, Ngoc-Tu Nguyen, and Van-Trung Pham

A Fast Method for Decoding Reed-Solomon Codes on Processors ......................................................293
   Yan-Haw Chen, Ching-Fu Huang, and Shao-I Chu

An Energy Minimization Approach for Automatic Video Shot and Scene Boundary Detection ..................297
   Sinnu Susan Thomas, Sumana Gupta, and K.S. Venkatesh

A Dynamic Street View System Using Video Event Data Recorder ......................................................301
   Ching-Hao Lai, Jun-Dong Chang, Ji-Wei Lu, and Fay Huang

Session 12: System-on-Chip for Signal Processing

Hardware and Software Co-design of the Moving Object Tracking System ............................................305
   Yeu-Horng Shiau, Cheng-Han Li, Zhi-hao Wang, and Yi-Tai Guo

Low-Cost and Low-Complexity Electrocardiogram Signal Recorder Design Based on Arduino Platform .................................................................309
   Shin-Chi Lai, Wen-Chih Li, Sin-He You, Da-Wei Jhuang, and Shih-Ting Gao

A Novel Coherence-Function-Based Noise Suppression Algorithm by Applying Sound-Source Localization and Awareness-Computation Strategy for Dual Microphones ........................................................313
   Shin-Chi Lai, Hsu-Cheng Lai, Feng-Chung Hong, Huan-Ru Lin, and Sheau-Fang Lei

Ultra Low Power Circuit Design Based on Adiabatic Logic .................................................................317
   Chi-Chia Sun, Cheng-Chih Wang, and Ming-Hwa Sheu

Real-Time Text Detection Using PAC/DUE Embedded System ............................................................321
   Shih-Chang Hsia, Cheng-Nan Ho, and Chien-Hung Liu

Feature Points Based Video Object Tracking for Dynamic Scenes and Its FPGA System Prototyping ........325
   Yin-Tsung Hwang, Bing-Cheng Tsai, Yu-Ting Pai, and Ming-Hwa Sheu

High Dynamic Range Image Based on Block-Based Edge Strength for Embedded System Design ........329
   Wen-Kai Tsai, Chang-Jie Lai, Ming-Hwa Sheu, and Tsu-Hsiung Chen
Session 13: Video Information Processing and Pattern Recognition

Robust Object Tracking Using Adaptive Multi-Features Fusion Based on Local Kernel Learning .................................................................333
   Hainan Zhao and Xuan Wang

Dependency Parsing with Structure Knowledge .................................................................................................................................337
   Shixi Fan, Yongshuai Hou, and Lidan Chen

Semi-supervised Marginal Fisher Analysis ........................................................................................................................................341
   Shu Wang

Extracting Learning Features of Knowledge Unit in Knowledge Map ........................................................................................................345
   XiangJun Huang, QingHua Zheng, and Chao Zhang

Visualization for Non-linear Enhanced Volume Data ..........................................................................................................................349
   Fei Yang, Weigang Lu, Lei Zhang, Kuanquan Wang, and Yemin Li

Night Video Surveillance Based on the Second-Order Statistics Features ....................................................................................................353
   Cheng-Chang Lien, Wen-Kai Yu, Chang-Hsing Lee, and Chin-Chuan Han

Robust Handwriting Extraction and Lecture Video Summarization ........................................................................................................357
   Fu-Hao Yeh, Greg C. Lee, Ying-Ju Chen, and Chien-Hsing Liao

Full-Frame Video Stabilization via SIFT Feature Matching ..................................................................................................................361
   Yu-Hsi Chen, Hsueh-Yi Sean Lin, and Chi-h-Wen Su

Session 14: Intelligent Multimedia Tools and Applications

Bezier Curve-Based Tour Generator for Navigation in Google Earth-Based Virtual Campus ...............................................................................365
   Jen-Perng Yu, Jyh-Jong Lin, Mei-Chen Chu, and Yuh-Hwa Pai

Eye Tracking for Analyzing Applied Effects on Instructional Graphics Directing Visual Attention ..................................................................................................................369
   Hui-Hui Chen, Hung-Sheng Lai, Bor-Jiunn Hwang, Chiao-Wen Kao, and Shih-Yu Huang

Applying Media Richness Theory to Essay Writing Instruction - A Case of an Elementary School ........................................................................................................373
   Shyi-Huey Wu, Bor-Jiunn Hwang, Ya-Ping Fan, and Ching-Hui Chen

A Dead-Reckoning Positioning Scheme Using Inertial Sensing for Location Estimation .................................................................................................377
   Yih-Syih Chiou, Fuan Tsai, and Sheng-Cheng Yeh

High-Payload Lossless Data Hiding Scheme with Block Statistics Characteristics ........................................................................................................381
   Shang-Kuan Chen, Ran-Zan Wang, and Wen-Pinn Fang
Data Transmission System for Mobile Device by Audio Hiding Approach .........................................................385
  Wen-Pinn Fang, Ran-Zan Wang, Tzu-Hsuan Liao, Shang-Kuan Chen,
  and Yeuan-Kuen Lee

Video Resizing for Mobile Device .....................................................................................................................388
  Wen-Pinn Fang, Ming-Hao Liu, Yeuan-Kuen Lee, and Rei-Heng Cheng

Real-Time Broadcast System for Android System .................................................................................................392
  Wen-Pinn Fang, Chun Li, and Tsu-Hsun Fu

A Study on Captcha Recognition ......................................................................................................................395
  Chii-Jen Chen, You-Wei Wang, and Wen-Pinn Fang

Session 15: Advanced Multimedia Processing and Retrievals

An Image Inpainting Method for Stereoscopic Images Based on Filling Route .................................................399
  Fang-Hsuan Cheng and Moo-Di Loo

Retinal Projection Display Using Diffractive Optical Element ........................................................................403
  Yasuhiro Takatsuka, Hirofumi Yabu, Kayo Yoshimoto, and Hideya Takahashi

Three-Dimensional Light Field Display with Overlaid Projection ..................................................................407
  Hodaka Yamada, Hirofumi Yabu, Kayo Yoshimoto, and Hideya Takahashi

Vision-Based Path Learning for Home Robots ................................................................................................411
  Atsushi Ueno, Natsuki Kajihara, Natsuko Fujii, and Tomohito Takubo

A Cluster Based Ranking Framework for Multi-typed Information Networks ..................................................415
  Pyke Tin, Takashi Toriu, Thi Thi Zin, and Hiromitsu Hama

A New Background Subtraction Method Using Bivariate Poisson Process .....................................................419
  Thi Thi Zin, Pyke Tin, Takashi Toriu, and Hiromitsu Hama

Integration of Multiple Shape Features for Human Detection in Videos .........................................................423
  Liang-Hua Chen, Pei-Chieh Lee, Li-Yun Wang, and Hong-Yuan Liao

Scientific Literature Retrieval Model Based on Weighted Term Frequency ......................................................427
  Xi-Quan Yang, Dian Yang, Ming Yuan, and Xing-Hua Lv

Session 16: Intelligent Image and Signal Processing

Based on the Texture Analysis to Inspect the Tread Worn Status on the Tire .....................................................431
  Shih-Yen Huang and You-Jyun Syu

Blurred Image Restoration Using Fast Blur-Kernel Estimation ........................................................................435
  Hui-Yu Huang and Wei-Chang Tsai

The Cleaning Machine Path Design Using Image Recognition Techniques ....................................................439
  Wen-Yuan Chen, Shih-Sung Cheng, Ching-Te Wang, Chin-Fu Tsai,
  and Chiou-Kou Tung
Particle Swarm Optimization Enhancement by Applying Global Ratio Based Communication Topology .................................................................443
  Ruey-Maw Chen and Hua-Tsun Huang

  Chen-Chung Liu, Shao-Wei Chu, Yung-Kuan Chan, and Shyr-Shen Yu

License Plate Location System Using Smart-Phone with G-Sensor .................................................................451
  Chui-Mu Wang, Jian-De Hong, Geng-Cheng Lin, Jing-Yuan Su, and Zhe-Fu Lin

Session 17: Multimedia Security and Privacy

A New Approach to Reversible Watermarking .........................................................................................................................455
  Toshiki Ito, Ryo Sugimura, Hyunho Kang, Keiichi Iwamura, Kitahiro Kaneda, and Isao Echizen

A Zero-Watermarking-Like Steganography and Potential Applications ..............................................................................................459
  Hirokazu Ishizuka, Isao Echizen, Keiichi Iwamura, and Koichi Sakurai

Surveillance Camera System to Achieve Privacy Protection and Crime Prevention .................................................................463
  Kento Kobayashi, Keiichi Iwamura, Kitahiro Kaneda, and Isao Echizen

Image Protection System with Steganography and Authentication ........................................................................................................467
  Hyunho Kang and Keiichi Iwamura

Analysis of Facebook Friends Using Disclosure Level ....................................................................................................................471
  Shimon Machida, Tomoko Kajiyama, Shimada Shigeru, and Isao Echizen

Steganalysis of LSB Matching Based on Local Binary Patterns ........................................................................................................475
  Xinlu Gui, Xiaolong Li, and Bin Yang

Optimizing Pixel Predictors Based on Self-Similarities for Reversible Data Hiding ....................................................................................481
  Xiaocheng Hu, Weiming Zhang, and Nenghai Yu

Polynomial-Based Secret Sharing Scheme Based on the Absolute Moment Block Truncation Coding Technique ..................................................485
  Chin-Chen Chang and Chin-Yu Sun

Applying Histogram Modification to Embed Secret Message in AMBTC .............................................................................................489
  Chin-Chen Chang, Hsiao-Ling Wu, and Ting-Feng Chung

Session 18: Recent Advances in Robust Information Hiding against Print-Scan Process

Compatible 2D-Code Having Tamper Detection System with QR-Code .............................................................................................493
  Takayuki Ishihara and Michiharu Niimi

  Kitahiro Kaneda, Hiroyasu Kitazawa, Keiichi Iwamura, and Isao Echizen
Session 19: Network Testbed and Industrial Control System Security

Cyber Security Risk Assessment of Communication Network of Substation Based on Improved Grey Clustering ..........................................................................................................................524
  Haihui Gao, Zhonghua Dai, Yong Peng, and Huikang Lu

Multi-agent Intrusion Detection System Using Feature Selection Approach ........................................................................................................................................528
  Yi Gong, Yong Fang, Liang Liu, and Juan Li

A New Information Security Risk Assessment Method in Power Production System Based on Rough Sets and Bayesian Network ........................................................................................................532
  Zhonghua Dai, Haihui Gao, Yong Peng, and Lu Huikang

Techniques and Research Trends of Network Testbed .........................................................................................................................537
  Haihui Gao, Yong Peng, Zhonghua Dai, and Hanjing Li

Formalization and Systematization of Differential Cryptanalysis Notions ........................................................................................................................542
  Andrey Pestunov

An AODV-Based Backup Routing Mechanism for Time-Critical in Wireless Mesh Networks ........................................................................................................................546
  Ming-Hwa Cheng, Rui-Juan Deng, Wen-Shyang Hwang, and Yan-Jing Wu
Session 20: Signal Processing Methods for Music Information Retrieval in the Future Internet

A Singing Voice Synthesizer Controlled by Arm Motions Using Compressed Phoneme Determination Algorithm ................................................................. 550

Masashi Ito, Tomohiro Ashina, and Yujiro Saegusa

Analysis of English Pronunciation of Singing Voices Sung by Japanese Speakers ........................................................................................................ 554

Kazumichi Yoshida, Takashi Nose, and Akinori Ito

Assessing the Intended Enthusiasm of Singing Voice Using Energy Variance ........................................................................................................ 558

Akinori Ito

Transcribing Frequency Modulated Musical Expressions from Polyphonic Music Using HMM Constrained Shift Invariant PLCA ............................................ 562

Dooyong Sung and Kyogu Lee

On-Line Nonnegative Matrix Factorization for Music Signal Separation ................................................................................................................ 566

Seokjin Lee

Melody Extraction for Vocal Polyphonic Music Based on Bayesian Framework ....................................................................................................... 570

Liming Song, Ming Li, and Yonghong Yan

Session 21: Technologies for Speech Communication in the Future Internet

Emotional Speech Recognition and Synthesis in Multiple Languages toward Affective Speech-to-Speech Translation System .................................... 574

Masato Akagi, Xiao Han, Reda Elbarougy, Yasuhiro Hamada, and Junfeng Li

Quantized F0 Context and Its Applications to Speech Synthesis, Speech Coding, and Voice Conversion ................................................................. 578

Takashi Nose and Takao Kobayashi

Voice Activity Detection Based on Statistical Model Employing Deep Neural Network .............................................................................................. 582

Inyoung Hwang and Joon-Hyuk Chang

Speaker Adaptation Using Nonlinear Regression Techniques for HMM-Based Speech Synthesis .................................................................................. 586

Doo Hwa Hong, Shin Jae Kang, Joun Yeop Lee, and Nam Soo Kim

Boosted Hybrid DNN/HMM System Based on Correlation-Generated Targets .................................................................................................... 590

Mengzhe Chen, Qingqing Zhang, Jielin Pan, and Yonghong Yan

Enhanced Out of Vocabulary Word Detection Using Local Acoustic Information ............................................................................................... 594

Xuyang Wang, Ta Li, Pengyuan Zhang, Jielin Pan, and Yonghong Yan
Session 22: 3D Spatial Audio Technologies in the Future Internet

Virtual Auditory Display by Remote Rendering via Computer Network ..................................................598
  Yukio Iwaya, Makoto Otani, Takao Tsuchiya, and Junfeng Li

Effect of Interaural Difference for Localization of Spatially Segregated Sound ........................................602
  Daisuke Morikawa

Representation of Individual HRTFs Using Weighting Coefficients of SENZI .............................................606
  Shuichi Sakamoto, Yoshiki Satou, Jorge Trevino, and Yo-iti Suzuki

Feasibility Study for Objective Measurement on Sound Localization Using Auditory Evoked Potential .............................................610
  Chan Jun Chun, Seok Hee Jeong, Jong Won Shin, Hong Kook Kim, and Jin Ah Kang

Auralization of Musical Instruments in Virtual Halls Considering Source Directivity ........................................614
  Park Kyoungsoo, Jeong-Hun Seo, Kim JeungHun, and Cheon Sung Jun

On the Performance and Robustness of Crosstalk Cancelation with Multiple Loudspeakers .............................................618
  Xing Yang, Risheng Xia, Zhonghua Fu, Junfeng Li, Yonghong Yan, Shuichi Sakamoto, and Yoiti Suzuki

Recognizing Actions with Multi-view 2D Observations Recovered from Depth Maps .............................................622
  Guoliang Lu, Yiqi Zhou, and Xueyong Li

Session 23: New Advances on Multimedia Security and Forensics

Improved SIFT-Based Copy-Move Detection Using BFSN Clustering and CFA Features .............................................626
  Lu Liu, Rongrong Ni, Yao Zhao, and Siran Li

Security Monitoring by Watermarking and Hashing for Multimedia Service on Internet Platform .............................................630
  Zi Wang, Ju Liu, Wenbo Wan, Jiande Sun, Jun Bo, and Yongkang Liu

Pitfalls in an Ultra-Lightweight Authentication Protocol for Low-Cost RFID .............................................634
  Chien-Ming Chen, Jeng-Shyang Pan, Raylin Tso, Szu-Wei Huang, and Mu-En Wu

Regular Clipping Detection of Image Based on SIFT .............................................638
  Huang Yan-Li, Cui Hao-Liang, and Niu Shao-Zhang

A Secure RFID Mutual Authentication Protocol Conforming to EPC Class 1 Generation 2 Standard .............................................642
  Chin-Chen Chang, Wei-Yi Chen, and Ting-Fang Cheng
Session 24: Wireless Network
The Research and Analysis for Rear View Transmission Based on IEEE 802.11 Wireless Network
Tsung-Yuan Wu and Wei-Tsong Lee
Reducing the Power Consumption of Servers with Bandwidth Consideration
Yu-Chang Lin, Wei-Tsong Lee, and Jing Yue Qiu
FHR-SCTP: The Research of a Quality Aware SCTP Congestion Control
Chen-Wei Chang, Wei-Tsong Lee, and Hsin-Wen Wei
Dynamically Adjust Packet Size and Block Size to Achieve Maximum Effectiveness of Forward Error Correction
Kai-Po Chuang, Wei-Tsong Lee, and Hsin-Wen Wei
The Study of Mobile E-Portfolio Architecture
Yu-Jen Pan
A Location-Aware Home Appliance Control System
Rung-Shiang Cheng, Chia-Peng Lin, and Jiun-Yu Jhou

Session 25: Wireless Network Algorithm and Theory I
A Density-Aware Location-Aided Routing Protocol for Wireless Ad-Hoc Networks
Shih-Chang Huang and Hong-Yi Chang
A Novel Recommendation Scheme for Increasing Connectivity in ZigBee Wireless Sensor Networks
Hong-Yi Chang, Shih-Chang Huang, Chih-Chun Lai, and Zih-Huan Hong
Computing the Probability of Specific Random Sector Graphs with Applications in Wireless Networks with Directional Antennas
Chun-Yi Wu and Chang Wu Yu
A Novel Relay Placement Algorithm Based on Puzzle Games for Indoor Wireless Sensor Networks
Hong-Yi Chang, Yu-Huei Huang, and Tu-Liang Lin
A Novel Algorithm for Searching Parking Space in Vehicle Ad Hoc Networks
Hong-Yi Chang, Hao-Wen Lin, Zih-Huan Hong, and Tu-Liang Lin
Performance Evaluations of an Ant Colony Optimization Routing Algorithm for Wireless Sensor Networks
Tu-Liang Lin, Yu-Sheng Chen, and Hong-Yi Chang
### Session 26: Cloud Computing

Adaptive Job Assign Algorithm Based on Hierarchical Server Cloud Computing ..........................694
  Jing-Yue Qiu, Hsin-Wen Wei, Wei-Tsong Lee, and Yu-Chang Lin

A Novel Protocol UDCP for Improving Fairness and Maintaining the High-Speed Rate of UDP ..........................698
  Heng-Yao Chang, Wei-Tsong Lee, and Hsin-Wen Wei

Base on Game Theory Model to Improve Trust Access Control in Cloud File-Sharing System ..................702
  Wei-Jyun Wong, Wei-Tsong Lee, and Hsin-Wen Wei

Leakage Resilient Provable Data Possession in Public Cloud Storage ................................................706
  Yongjun Ren, Yaping Chen, Jin Wang, and Liming Fang

Attributed Based Provable Data Possession in Public Cloud Storage ....................................................710
  Yongjun Ren, Zhenqi Yang, Jin Wang, and Liming Fang

Data Access Control for Multi-authority Cloud Storage Systems .........................................................714
  Zhangjie Fu, Lin Xin, Jin Wang, and Xingming Sun

### Session 27: Wireless Network Algorithm and Theory II

A Virtual Force Based Movement Scheme for Area Coverage in Directional Sensor Networks ..................718
  Chiu-Kuo Liang, Cheng-Yen Chung, and Chuan-Feng Li

Self-Stabilizing Distributed Formation of Minimal k-Dominating Sets in Mobile Ad Hoc Networks ................723
  Li-Hsing Yen and Zong-Long Chen

Analysis of Handover Decision with Adaptive Offset in Next-Generation Hybrid Macro/Femto-cell Networks .................................................................................................................................729
  Min-Shu Hung, Jen-Yi Pan, and Zheng-En Huang

Energy Consumption Analysis for Sensors in Multi-sink Wireless Sensor Networks ................................735
  Rei-Heng Cheng, Chiming Huang, Wen-Pinn Fang, Shang-Kuan Chen, and Ran-Zan Wang

End-to-End Delay Performance Analysis of Anypath Routing over Wireless Mesh Networks ..................739
  Ming-Che Chen and Hui-Tang Lin
Session 28: Internet I

A Reducing Broadcast Message Method in Vehicular Networks ........................................................744
Ming-Fong Tsai and Chih-Han Chang

Incorporation of Perceptually Energy-Compensated QIM into DWT-DCT Based Blind Audio Watermarking ..........................................................748
Hwai-Tsu Hu, Szu-Hong Chen, and Ling-Yuan Hsu

Service Conflict Detection and Avoidance Based on Scene with Urgency Degree ..................................................753
Xukai Wang, Yan Sun, and Hong Luo

A Dimension Model for Conflict-Free Service Management in Smart Environment Control System ..........................................................757
Yanchen Ren, Hong Luo, and Liang Liu

A Novel Automatic Ontology Construction Method Based on Web Data ..............................................762
Qiuxia Song, Jin Liu, Xiaofeng Wang, and Jin Wang

A New Genetic Algorithm for Overlapping Community Detection ..........................................................766
Bo Shen, Ningwei Wang, and Huihuai Qiu

Session 29: Security

Security Analysis for UHF RFID Tags ........................................................................................................770
Xinwei Liu, Yan Sun, and Jie Liu

Oriented Group Provable Data Possession in Public Cloud ..............................................................................775
Yongjun Ren, Jiang Xu, Jin Wang, and Liming Fang

Analysis of Delegable and Proxy Provable Data Possession for Cloud Storage ........................................779
Yongjun Ren, Jian Shen, Jin Wang, and Liming Fang

Secure Storage of Data in Cloud Computing .................................................................................................783
Zhangjie Fu, Xinyue Cao, Jin Wang, and Xingming Sun

Document Attribute-Based Keyword Search over Encrypted Data ..........................................................787
Zhangjie Fu, Jie Xi, Jin Wang, and Xingming Sun

A Similarity Search Method for Encrypted Cloud Document ..................................................................791
Zhangjie Fu, Jianguang Shu, Jin Wang, and Xingming Sun

Security Analysis of Delegable and Proxy Provable Data Possession in Public Cloud Storage ..........................................................795
Yongjun Ren, Jian Shen, Jin Wang, and Liming Fang
Session 30: Control I

Intelligent Level Crossing Safety Control System ................................................................. 799
  Chih-Wen Li, Chia-Cheng Chu, Wei-Lun Fong, and Hwang-Cheng Wang

A Metaheuristic Artificial Immune System Algorithm for Mobile Robot Navigation .................................................. 803
  Hsu-Chih Huang, Ter-Feng Wu, and Chun-Yu Huang

Adaptive Hierarchical Emotion Recognition from Speech Signal for Human-Robot Communication ............................................ 807
  Ba-Vui Le and Sungyoung Lee

Impact of Jamming Attack on Galileo Receivers ................................................................. 811
  Ying-Ren Chien and Po-Yu Chen

Study of Stability Indices for Special Protection System in Taiwan ................................................. 815
  Yi-Ting Chou, Yi-Jen Wang, Chung Han Hsieh, Ruei-Yu Wang, and Syed Khawar Shah

Session 31: Wireless Sensor Network

Data Acquisition and Transmission Reliability for Wireless Image Sensor Networks ................................................................. 819
  Dan Tao, Guangwei Yang, Yan Sun, Haiyang Zhang, and Xiaoyu Feng

  Zhipeng Gao, Kan Chen, Weijing Cheng, Yuwen Hao, and Xiaoxue Li

An Energy Efficient Data Transmission Mechanism for Middleware of Wireless Sensor Network .................................................. 827
  Zhiqiang Shi, Jin Liu, Qiuxia Song, and Jin Wang

A Fuzzy Control Theory and Neural Network Based Sensor Network Control System .................................................. 831
  Anqi Wang, Jin Liu, Xiaofeng Wang, and Jin Wang

A Sensor Information Gateway Based on Thing Interaction in IoT-IMS Communication Platform .................................................. 835
  Jenq-Muh Hsu and Chin-Yo Chen

Session 32: Control II

Adaptive Fuzzy CMAC Design for an Omni-directional Mobile Robot .................................................. 839
  Ter-Feng Wu, Hsu-Chih Huang, Pu-Sheng Tsai, Nien-Tsu Hu, and Zhi-Qiang Yang

A Single-Stage Power Converter for DC UPS Applications .................................................. 844
  Maoh-Chin Jiang, Bing-Jyun Shih, Shyh-Shing Perng, and Tai-Chun Liu
A High Performance Three-Phase Active Power Filter .................................................................848

Maoh-Chin Jiang, Shyh-Shing Perng, Bing-Jyun Shih, Tai-Chun Liu, and Wei-Cheng Ke

Design and Implementation of a FPGA-Based Induction Motors Drive System ..........................852

Shyh-Shing Perng, Chih-Wen Li, Maoh-Chin Jiang, Ter-Feng Wu, and Rui-Ting Ma

Design of a Kinect Sensor Based Posture Recognition System ..................................................856

Chia-Wen Chang, Min-Da Nian, Yi-Fang Chen, Ching-Ho Chi, and Chin-Wang Tao

Session 33: Network Service

An Algorithm to Detect the Crack in the Tunnel Based on the Image Processing ..........................860

Dapeng Qi, Yun Liu, Xiaoyang Wu, and Zhenjiang Zhang

A Concept Maps Oriented E-Book Content Design System for Evaluating Learning Performance .................................................................864

De-Wei Chang, Chin-Feng Lai, Shih-Yeh Chen, Yueh-Min Huang, and Yu-Lin Jeng

A Forecasting System of Micro-blog Public Opinion Based on Artificial Neural Network ...................868

Nai-Yue Chen, Yun Liu, and Zhen-Jiang Zhang

Research on Analysis Method of Network User Preference ..........................................................872

Shen Bo, Zhang Huan, and Hu Baowen

An Improved Collaborative Filtering Recommendation Algorithm for Microblog Based on Community Detection ........................................................................876

Hui-Huai Qiu, Yun Liu, Zhen-Jiang Zhang, and Gui-Xun Luo

Sorting Topic Specific Web Pages Based on Ontology Knowledge ...............................................880

Qiuxia Song, Jin Liu, Ming Ni, Liang Chen, and Jialiang Shen

Session 34: Communication

A Heuristic Design of Uplink Scheduler in LTE-A Networks .......................................................884

Yen-Wen Chen, Pei-Ying Hsu, Jung-Heng Tsai, Po-Yin Liao, and Meng-Hsien Lin

An Effective NAT Traversal Mechanism for IMS Applications in 3GPP Networks .........................889

Whai-En Chen and Bo-En Chen

Facilitating Initial Cell Selection in Dense Heterogeneous Network Using Mobile Speed Classification .................................................................893

Chun-Yen Hsu, Chia-Hung Wei, Feng-Ming Yang, and Whai-En Chen

Downlink Co-tier Interference Mitigation for Femtocell Networks .................................................898

Kuo-Chang Ting, Hwang-Cheng Wang, Chih-Cheng Tseng, Fang-Chang Kuo, and Hung-Te Huang
A Study on Effects of Different Access Modes on Database Performance for SIP Server .......................................................... 902
   Whai-En Chen, Shih-Yuan Cheng, and Yi-Lun Ciou

A Routing Framework in Software Defined Network Environment ................................................................. 907
   Zhaowen Lin, Can Zhang, Yan Ma, and Jian Li

**Session 35: Internet II**

Cloud Terminal Access and QoS Enhancement by Content Store and Service
Load Classification in Named Data Network .................................................................................................................. 912
   Tin-yu Wu and Chun-yu Hsieh

User Posting Behavior Analysis and Modeling in Microblog ..................................................................................... 916
   Yun Liu and Weiguo Yuan

Research on Topic Detection Strategy Based on Extension of Comments and HowNet Lexeme .................................. 920
   Yun Liu, Xiaoxian Li, and Bing Zhao

Mobile Payment Anomaly Detection Mechanism Based on Information Entropy .................................................... 924
   Zhenjiang Zhang, Xiaoni Wang, and Lin Sun

A New Method of Subway Tunnel Crack Image Compression Based on ROI and Motion Estimation ......................... 928
   Xiaoyang Wu, Yun Liu, Dapeng Qi, and Zhenjiang Zhang

Analysis of Coexistence between the DTMB System and TD-LTE System ................................................................ 932
   Lianfen Huang, Xuelian Yang, Zhiyuan Shi, Tang Yuliang, Xin Su, and Jie Zeng

PBMA: A Proxy Based Mobility Support Approach in Named Data Networking ......................................................... 938
   Ying Rao, Deyun Gao, Hongbin Luo, Hongke Zhang, and Shuai Gao

**Session 36: Internet III**

A Star Search Algorithm for Civil UAV Path Planning with 3G Communication ......................................................... 942
   Fan-Hsun Tseng, Tsung-Ta Liang, Cho-Hsuan Lee, Li-Der Chou, and Han-Chieh Chao

A Dynamic Video Streaming Quality Adaption Method for IP Multimedia Subsystem .................................................. 946
   Shih-Wen Hsu, Song-Chun Lin, Yong-Ming Jheng, Wei-Kuan Shih, and Han-Chieh Chao

A Power Saving Scheme taking into Account Coverage and Connection Problem in WSNs .................................... 950
   Shu-Wei Pai, Hsin-Hung Cho, Han-Chieh Chao, and Timothy K. Shih

The Potential Cloud Application Model for Internet of Things - Case Study of Shopping Malls .................................. 954
   Kai-Di Chang, Jiann-Liang Chen, Han-Chieh Chao, and Ching-Wei Liu
Session 37: Robotics

Use of Ultrasonic Sensors to Enable Wheeled Mobile Robots to Avoid Obstacles .................................................................958
  Ter-Feng Wu, Pu-Sheng Tsai, Nien-Tsu Hu, and Jen-Yang Chen

Digital Tracker for a Class of Continuous Time-Delay Singular Systems .................................................................962
  Nien-Tsu Hu, Ter-Feng Wu, Pu-Sheng Tsai, and Jen-Yang Chen

Adaptive Control Using the Fuzzy Basis Function with Robust Design .................................................................966
  Nien-Tsu Hu, Ter-Feng Wu, Pu-Sheng Tsai, and Jen-Yang Chen

Modeling of Fuzzy Control Design for Nonlinear Systems Based on Takagi-Sugeno Method .................................................................970
  Pu-Sheng Tsai, Ter-Feng Wu, Nien-Tsu Hu, and Jen-Yang Chen

Adaptive TSK Fuzzy Control Design Using Scaling Gain Adaptation for Nonlinear Systems .................................................................974
  Nien-Tsu Hu, Ter-Feng Wu, Pu-Sheng Tsai, and Jen-Yang Chen

Obstacle Avoidance System for Wheeled Mobile Robots by CMOS Image Sensors .................................................................978
  Pu-Sheng Tsai, Ter-Feng Wu, Nien-Tsu Hu, and Jen-Yang Chen

Author Index ............................................................................................................................................982
