Gesture recognition based on context awareness for human-robot interaction p. 1
Evolving creatures in virtual ecosystems p. 11
The application of affective virtual human in intelligent Web tutoring system p. 21
Extracting behavior knowledge and modeling based on virtual agricultural mobile robot p. 28
Human motion interpolation using space-time registration p. 38
Multi-stream based rendering resource interception and reconstruction in D3DPR for high-resolution display p. 48
VirtualPhonepad: a text input tool for virtual environments p. 58
An animation system for imitation of object grasping in virtual reality p. 65
Generating different realistic humanoid motion p. 77
Handheld AR for collaborative edutainment p. 85
VR-based simulation for the learning of gynaecological examination p. 97
Visual perception modeling for intelligent avatars p. 105
Steering behavior model of visitor NPCs in virtual exhibition p. 113
Scalable architecture and content description language for mobile mixed reality systems p. 122
A novel sound localization experiment for mobile audio augmented reality applications p. 132
A tangible user interface for remote collaboration system using mixed reality p. 143
Multi-sensor data fusion based on fuzzy integral in AR system p. 155
AR baseball presentation system with integrating multiple planar markers p. 163
An efficient 3D registration method using markerless image in AR-based CNC machining simulation p. 175
Shared design space: sketching ideas using digital pens and a large augmented tabletop setup p. 185
AR table tennis: a video-based augmented reality sports game p. 197
Enhancing immersiveness in AR-based product design p. 207
Personal information annotation on wearable computer users with hybrid peer-to-peer communication p. 217
An initialization tool for installing visual markers in wearable augmented reality p. 228
Increasing camera pose estimation accuracy using multiple markers p. 239
Exploring human-robot interaction through telepresence board games p. 249
Projected reality - content delivery right onto objects of daily life p. 262
An evaluation of an augmented reality multimodal interface using speech and paddle gestures p. 272
An augmented reality system for computer maintenance p. 284
Multi-view video composition with computer graphics p. 292
Floating virtual mirrors: visualization of the scene behind a vehicle p. 302
A scalable framework for distributed virtual reality using heterogeneous processors p. 314
A collaborative virtual reality environment for molecular modeling p. 324
An interest filtering mechanism based on LoI p. 334
Study on data collaboration service for collaborative virtual geographic environment

VCS: a virtual collaborative space based on immersive teleconferencing

A scalable HLA-based distributed simulation framework for VR application

Location-based device ensemble architecture for a spatial reality enhancement of distributed multimedia presentation

Air-jet button effects in AR

Perceptualizing a "haptic edge" with varying stiffness based on force constancy

Multi-sensory perception of roughness: empirical study on effects of vibrotactile feedback and auditory feedback in texture perception

The research of spiritual consolation object with the function of affective computing

Real time dynamics and control of a digital human arm for reaching motion simulation

Emotion recognition using physiological signals

Animation preserving simplification for MPEG based scalable virtual human

A virtual reality training system for robot assisted neurosurgery

The experiment of improving students' spatial ability by using VGLS

Sketch based 3D animation copy

Extracting space welding seam for virtual teach-in of robotic welding system

Primary-color-based spatial layout features and new image matching algorithm based on dual features

Ridge-valley lines smoothing and optimizing

Mynews: personalization of Web contents transcoding for mobile device users

Visualization application in clothing biomechanical design

Robot position estimation and tracking using the particle filter and SOM in robotic space

Robust motion tracking in video sequences using particle filter

Fast motion estimation using spatio-temporal correlations

Bi-directional passenger counting on crowded situation based on sequence color images

Moving object detection based on a new level set algorithm using directional speed function

An integrated robot vision system for multiple human tracking and Silhouette extraction

Disparity weighted histogram-based object tracking for mobile robot systems

Towards robust 3D reconstruction of human motion from monocular video

Wavelet scalable video coding with minimal average temporal distance for motion estimation

Single camera remote eye gaze tracking under natural head movements

High-quality shear-warp volume rendering using efficient supersampling and pre-integration technique

A simple, efficient method for real-time simulation of smoke shadow

Reducing interrupt latency at Linux kernel level for real-time network

Investigation of surface integrity in the case of chemical mechanical polishing silicon wafer by molecular dynamics simulation method
Independent component analysis approach for the neurobiological recording data p. 660
Real-time virtual surgery simulation employing MM-model and adaptive spatial hash p. 666
Creating dynamic panorama using particle swarm optimization p. 676
Real-time and realistic simulation of large-scale deep ocean surface p. 686
Exploiting frame-to-frame coherence for rendering terrain using continuous LOD p. 695
Light field modeling and its application to remote sensing image simulation p. 705
Simple and fast terrain rendering using graphics hardware p. 715
Animating grass in real-time p. 724
Gaussian mixture model in improved HLS color space for human Silhouette extraction p. 732
Geometry compression using spherical wavelet p. 742
Dynamic radiosity on multi-resolution models p. 753
Mesh simplification algorithm based on N-edge mesh collapse p. 764
3-D personalized face reconstruction based on multi-layer and multi-region with RBFs p. 775
Recognition and location of fruit objects based on machine vision p. 785
A new algorithm of gray watermark embedding p. 796
A semiautomatic nonrigid registration in liver cancer treatment with an open MR system p. 802
Example-based realistic terrain generation p. 811
Bayesian mesh reconstruction from noisy point data p. 819
Efficient retrieval of 3D models based on integer medial axis skeleton p. 830
Implicit surface boolean operations based cut-and-paste algorithm for mesh models p. 839
Meshes simplification based on reverse subdivision p. 849
Kd-tree based OLS in implicit surface reconstruction with radial basis function p. 861
Retrieving 3D CAD model with regional entropy distributions p. 871
Virtual tang-style timber-frame building complex p. 880
An accelerating rendering method of hybrid point and polygon for complex three-dimensional models p. 889
User mediated hypermedia presentation generation on the semantic Web framework p. 901
Progressive transmission of vector map data based on polygonal chain simplification p. 908
Image-based fast small triangle rasterization p. 918
On volume distribution features based 3D model retrieval p. 928
Personalized model deformation based on slice space representation p. 938
Flexible camera setup for visual based registration on 2D interaction surface with undefined geometry using neural network p. 948
Painterly rendering with vector field based feature extraction p. 960
Reducing time cost of distributed run-time infrastructure p. 969
Wearable multimodal interface for helping visually handicapped persons p. 980
Personalized primary port : analysis of user view for the smart environment p. 989
