Mathematical Tools in Computer Graphics with C# Implementations
by Hardy Alexandre, Willi-Hans Steeb,

Table of Contents

List of Figures xiii
Notation xvii

Vectors, Matrices and Transforms 1
Vector Spaces 1
Points and Vectors 4
Homogeneous Coordinates 4
Representing Objects by Points 5
Affine Transformations 5
Introduction and Definitions 5
Scaling 6
Translation 7
Rotation 7
Concatenation of Transforms 10
Projection 11
Quaternions 13
C# Implementation 15
Lighting 23
Shading 23
Affine Transforms and Normal Vectors 24
Local Lighting Models 25
The Phong Lighting Model     25
Emissive Properties     26
Ambient Reflection     26
Diffuse Reflection     26
Specular Reflection     27
Multiple Colored Light Sources     28
Attenuation     29
Lights     30
Spot Lights     30
Transparent Objects     31
Cook-Torrance Model     31
Bidirectional Reflectivity     31
Cook-Torrance Model     32
Microfacet Distribution Term     33
Geometric Surface Occlusion Term     33
Fresnel Term     37
Beer-Lambert Law     38
C# Implementation     39
Rasterization     49
Pixels     49
Drawing Lines     49
Bresenham's Algorithm for Lines     50
Drawing Circles     51
Bresenham's Algorithm for Circles     51
Filling     53
Gouraud Shading     54
Rasterization in C#     55
Drawing Pixels     57
Bresenham's Algorithms in C#     57
Fractals     59
Mandelbrot Set     60
Julia Set     62
Iterated Function Systems     64
L-Systems and Fractals     65
Kronecker Product and Fractals     69
Definitions     69
Kronecker Product Fractals     71
Curves     75
Introduction     75
Affine Invariance     76
Convex Hull     77

Lagrange Interpolation     78
C# Implementation     79
Beziers Curves 83
Affine Invariance 83
Convex Hull 84
Derivative at Edges 84
Piecewise Continuous Bezier Curves 86
Rendering 87
Rational Bezier Curves 91
Bezier Curves: Conic Sections 91
C# Implementation 91
Catmull-Rom Splines 92
Bessel-Overhauser Splines 93
Tension-Continuity-Bias Splines 93
Uniform B-Splines 94
Affine Invariance 98
Convex Hull 98
Cox-de Boor Formula 98
C# Implementation 99
Non-Uniform B-Splines 99
Interpolating with B-Splines 100
Periodic Interpolation 102
Non-Uniform Rational B-Splines 104
Trigonometric Interpolation 104
METAPOST and Bezier Curves 108
Surfaces 167
Parametric Surfaces 167
Tensor Product Surfaces 168
Bezier Surfaces 169
Tensor Product Bezier Surfaces 170
Triangular Bezier Surfaces 171
Rational Bezier Surfaces 173
Bezier Surface Interpolation 173
B-Spline Tensor Product Surfaces 173
B-Spline Surface Interpolation 174
Subdivision Surfaces 177
Loop Subdivision 180
Modified Butterfly Subdivision 183
[radical]3 Subdivision 185
Interpolating [radical]3 Subdivision 187
Catmull-Clark Subdivision 191
Doo-Sabin Subdivision 192
Comparison 195
Interpolation with Subdivision Surfaces 198
Curvature of Surfaces 200
Harmonic Surfaces 206
Tensor Product Surface 206
