## Contents

### Part 1 The Properties and Neural Substrate of Eye Movements

1. **A SURVEY OF EYE MOVEMENTS: CHARACTERISTICS AND TELEOLOGY**  3  
   - Why Study Eye Movements?  3  
   - Visual Requirements of Eye Movements  5  
   - Functional Classes of Eye Movements  5  
   - Orbital Mechanics: Phasic and Tonic Innervation  6  
   - Vestibular and Optokinetic Systems  8  
   - Saccadic System  10  
   - Smooth Pursuit and Visual Fixation  11  
   - Combined Movements of the Eyes and Head  12  
   - Vergence Eye Movements  12  
   - Three-Dimensional Aspects of Eye Movements  13  
   - Adaptive Control of Eye Movements  13  
   - Voluntary Control of Eye Movements  14  
   - Eye Movements and Spatial Localization  14  
   - The Scientific Method Applied to the Study of Eye Movements  15  
   - Summary  16  

2. **THE VESTIBULAR-OPTOKINETIC SYSTEM**  20  
   - Function of the Vestibular-Optokinetic System  22  
   - Anatomy and Physiology of the Peripheral Vestibular System  25  
   - Brainstem Elaboration of the Vestibulo-ocular Reflex  31  
   - Neural Substrate for Optokinetic Responses  40  
   - Quantitative Aspects of the Vestibular-Optokinetic System  40  
   - Adaptive Properties of the Vestibulo-ocular Reflex  53  
   - Vestibulocerebellar Influences on the Vestibulo-ocular Reflex  59  
   - Vestibular Sensation and the Role of the Cerebral Hemispheres in the Vestibulo-ocular Reflex  62  
   - Clinical Examination of Vestibular and Optokinetic Function  64  
   - Laboratory Evaluation of Vestibular and Optokinetic Function  71  
   - Pathophysiology of Disorders of the Vestibular System  76  
   - Summary  81

7. EYE-HEAD MOVEMENTS 315

Ocular Motor and Cephalomotor Systems 315
Stabilization of the Head 315
Voluntary Control of Eye-Head Movements 317
Examination of Eye-Head Movements 327
Laboratory Evaluation of Eye-Head Movements 328
Disorders of Eye-Head Movement 329
Summary 335

8. VERGENCENCE EYE MOVEMENTS 343

The Purpose of Vergence Eye Movements 343
Stimuli to Vergence Movements 344
Dynamic Properties of Vergence Eye Movements 348
Neural Substrate of Vergence Movements 355
Conceptual Models of Supranuclear Control of Vergence 360
Adaptive Mechanisms to Maintain Ocular Alignment 361
Examination of Vergence Movements 365
Laboratory Testing of Vergence Eye Movements 367
Abnormalities of Vergence 367
Summary 372

Part 2 The Diagnosis of Disorders of Eye Movements

9. DIAGNOSIS OF PERIPHERAL OCULAR MOTOR PALSIES AND
   STRABISMUS 385

A Pathophysiological Approach to Diplopia 386
Anatomy of the Orbital Fascia and the Extraocular Muscles 387
Structure and Function of Extraocular Muscle 392
Anatomy of Ocular Motor Nerves and Their Nuclei 396
Physiologic Basis for Conjugate Movements: Yoke Muscle Pairs 401
Clinical Testing in Diplopia 402
Pathophysiology of Some Commonly Encountered Signs in Strabismus 409
Clinical Features and Diagnosis of Concomitant Strabismus 414
Clinical Features of Ocular Nerve Palsies 416
Disorders of the Neuromuscular Junction 438
Chronic Progressive External Ophthalmoplegia and Restrictive Ophthalmopathies 444

10. DIAGNOSIS OF NYSTAGMUS AND SACCADIC INTRUSION 475

The Nature and Visual Consequences of Abnormal Eye Movements That Prevent
   Steady Fixation 476
Clinical and Laboratory Methods for Evaluating Nystagmus and Saccadic Intrusions 476
A Pathophysiological Approach to the Diagnosis of Nystagmus 479
Nystagmus Due to Vestibular Imbalance 480
Periodic Alternating Nystagmus 493
Seesaw and Hemi-Seesaw Nystagmus 496
Nystagmus Occurring When the Eyes are in Eccentric Gaze 498
Nystagmus Occurring in Association with Disease of the Visual System 502
Acquired Pendular Nystagmus and its Relationship to Disease of the Visual Pathways 505
Convergent-Divergent Forms of Nystagmus 511
Congenital Forms of Nystagmus 512
Lid Nystagmus 521
Saccadic Intrusions 521
Treatments for Nystagmus and Saccadic Intrusions 528

11. DIAGNOSIS AND MANAGEMENT OF VESTIBULAR DISORDERS 559
Vertigo and Dizziness 559
Oscillopsia 578
Skew Deviation and the Ocular Tilt Reaction (OTR) 581

12. DIAGNOSIS OF CENTRAL DISORDERS OF OCULAR MOTILITY 598
Using Eye Movements for Topological Diagnosis 599
Ocular Motor Syndromes Caused by Lesions in the Medulla 599
Ocular Motor Syndromes Caused by Disease of the Cerebellum 605
Ocular Motor Syndromes Caused by Disease of the Pons 616
Ocular Motor Syndromes Caused by Lesions of the Midbrain 630
Ocular Motor Syndromes Caused by Lesions in the Superior Colliculus 645
Ocular Motor Syndromes Caused by Lesions in the Diencephalon 645
Ocular Motor Abnormalities and Disease of the Basal Ganglia 648
Ocular Motor Syndromes Caused by Lesions in the Cerebral Hemispheres 654
Abnormalities of Eye Movements in Patients with Dementia 670
Eye Movement Disorders in Psychiatric Illnesses 671
Eye Movements in Stupor and Coma 673
Ocular Motor Dysfunction and Multiple Sclerosis (MS) 678
Ocular Motor Manifestations of Metabolic and Deficiency Disorders 680
Effects of Drugs on Eye Movements 683
