List of Figures	xiii
List of Tables	xvi
List of Examples	xxi
Foreword	xxv
Preface to Volume IV	xxix
IV.1 Value at Risk and Other Risk Metrics	1
IV.1.1 Introduction	1
IV.1.2 An Overview of Market Risk Assessment	4
IV.1.2.1 Risk Measurement in Banks	4
IV.1.2.2 Risk Measurement in Portfolio Management	6
IV.1.2.3 Risk Measurement in Large Corporations	7
IV.1.3 Downside and Quantile Risk Metrics	9
IV.1.3.1 Semi-Standard Deviation and Second Order Lower Partial Moment	9
IV.1.3.2 Other Lower Partial Moments	10
IV.1.3.3 Quantile Risk Metrics	11
IV.1.4 Defining Value at Risk	13
IV.1.4.1 Confidence Level and Risk Horizon	13
IV.1.4.2 Discounted P&L	15
IV.1.4.3 Mathematical Definition of VaR	15
IV.1.5 Foundations of Value-at-Risk Measurement	17
IV.1.5.1 Normal Linear VaR Formula: Portfolio Level	18
IV.1.5.2 Static Portfolios	20
IV.1.5.3 Scaling VaR	21
IV.1.5.4 Discounting and the Expected Return	23
IV.1.6 Risk Factor Value at Risk	25
IV.1.6.1 Motivation	26
IV.1.6.2 Normal Linear Equity VaR	27
IV.1.6.3 Normal Linear Interest Rate VaR	29

IV.1.7	Decomposition of Value at Risk	30
IV.1.7.1	Systematic and Specific VaR	31
IV.1.7.2	Stand-alone VaR	31
IV.1.7.3	Marginal and Incremental VaR	32
IV.1.8	Risk Metrics Associated with Value at Risk	33
IV.1.8.1	Benchmark VaR	34
IV.1.8.2	Conditional VaR: Expected Tail Loss and Expected Shortfall	35
IV.1.8.3	Coherent Risk Metrics	38
IV.1.9	Introduction to Value-at-Risk Models	41
IV.1.9.1	Normal Linear VaR	41
IV.1.9.2	Historical Simulation	42
IV.1.9.3	Monte Carlo Simulation	44
IV.1.9.4	Case Study: VaR of the S&P 500 Index	45
IV.1.10	Summary and Conclusions	47
IV.2	Parametric Linear VaR Models	53
IV.2.1	Introduction	53
IV.2.2	Foundations of Normal Linear Value at Risk	56
IV.2.2.1	Understanding the Normal Linear VaR Formula	56
IV.2.2.2	Analytic Formula for Normal VaR when Returns are Autocorrelated	60
IV.2.2.3	Systematic Normal Linear VaR	63
IV.2.2.4	Stand-Alone Normal Linear VaR	64
IV.2.2.5	Marginal and Incremental Normal Linear VaR	66
IV.2.3	Normal Linear Value at Risk for Cash-Flow Maps	67
IV.2.3.1	Normal Linear Interest Rate VaR	67
IV.2.3.2	Calculating PV01	68
IV.2.3.3	Approximating Marginal and Incremental VaR	70
IV.2.3.4	Disaggregating Normal Linear Interest Rate VaR	72
IV.2.3.5	Normal Linear Credit Spread VaR	75
IV.2.4	Case Study: PC Value at Risk of a UK Fixed Income Portfolio	79
IV.2.4.1	Calculating the Volatility and VaR of the Portfolio	80
IV.2.4.2	Combining Cash-Flow Mapping with PCA	81
IV.2.4.3	Advantages of Using PC Factors for Interest Rate VaR	85
IV.2.5	Normal Linear Value at Risk for Stock Portfolios	85
IV.2.5.1	Cash Positions on a Few Stocks	86
IV.2.5.2	Systematic and Specific VaR for Domestic Stock Portfolios	87
IV.2.5.3	Empirical Estimation of Specific VaR	90
IV.2.5.4	EWMA Estimates of Specific VaR	91
IV.2.6	Systematic Value-at-Risk Decomposition for Stock Portfolios	93
IV.2.6.1	Portfolios Exposed to One Foreign Currency	93
IV.2.6.2	Portfolios Exposed to Several Foreign Currencies	97
IV.2.6.3	Interest Rate VaR of Equity Portfolios	100
IV.2.6.4	Hedging the Risks of International Equity Portfolios	101
IV.2.7	Case Study: Normal Linear Value at Risk for Commodity Futures	103

IV.2.8	Student t Distributed Linear Value at Risk	106
IV.2.8.1	Effect of Leptokurtosis and Skewness on VaR	106
IV.2.8.2	Student t Linear VaR Formula	107
IV.2.8.3	Empirical Examples of Student t Linear VaR	109
IV.2.9	Linear Value at Risk with Mixture Distributions	111
IV.2.9.1	Mixture Distributions	111
IV.2.9.2	Mixture Linear VaR Formula	113
IV.2.9.3	Mixture Parameter Estimation	114
IV.2.9.4	Examples of Mixture Linear VaR	115
IV.2.9.5	Normal Mixture Risk Factor VaR	119
IV.2.10	Exponential Weighting with Parametric Linear Value at Risk	121
IV.2.10.1	Exponentially Weighted Moving Averages	121
IV.2.10.2	EWMA VaR at the Portfolio Level	124
IV.2.10.3	RiskMetrics™ VaR Methodology	126
IV.2.11	Expected Tail Loss (Conditional VaR)	128
IV.2.11.1	ETL in the Normal Linear VaR Model	129
IV.2.11.2	ETL in the Student t Linear VaR Model	130
IV.2.11.3	ETL in the Normal Mixture Linear VaR Model	132
IV.2.11.4	ETL under a Mixture of Student t Distributions	133
IV.2.12	Case Study: Credit Spread Parametric Linear Value at Risk and ETL	135
IV.2.12.1	The iTraxx Europe Index	135
IV.2.12.2	VaR Estimates	137
IV.2.13	Summary and Conclusions	138
IV.3	Historical Simulation	141
IV.3.1	Introduction	141
IV.3.2	Properties of Historical Value at Risk	144
IV.3.2.1	Definition of Historical VaR	144
IV.3.2.2	Sample Size and Data Frequency	145
IV.3.2.3	Power Law Scale Exponents	146
IV.3.2.4	Case Study: Scale Exponents for Major Risk Factors	147
IV.3.2.5	Scaling Historical VaR for Linear Portfolios	150
IV.3.2.6	Errors from Square-Root Scaling of Historical VaR	151
IV.3.2.7	Overlapping Data and Multi-Step Historical Simulation	151
IV.3.3	Improving the Accuracy of Historical Value at Risk	152
IV.3.3.1	Case Study: Equally Weighted Historical and Linear VaR	153
IV.3.3.2	Exponential Weighting of Return Distributions	156
IV.3.3.3	Volatility Adjustment	158
IV.3.3.4	Filtered Historical Simulation	163
IV.3.4	Precision of Historical Value at Risk at Extreme Quantiles	165
IV.3.4.1	Kernel Fitting	165
IV.3.4.2	Extreme Value Distributions	167
IV.3.4.3	Cornish–Fisher Approximation	170
IV.3.4.4	Johnson Distributions	172
IV.3.5	Historical Value at Risk for Linear Portfolios	175
IV.3.5.1	Historical VaR for Cash Flows	176
IV.3.5.2	Total, Systematic and Specific VaR of a Stock Portfolio	179

	IV.3.5.3	Equity and Forex VaR of an International Stock Portfolio	185
	IV.3.5.4	Interest Rate and Forex VaR of an International Bond Position	190
	IV.3.5.5	Case Study: Historical VaR for a Crack Spread Trader	192
IV.3.6		Estimating Expected Tail Loss in the Historical Value-at-Risk Model	195
	IV.3.6.1	Parametric Historical ETL	195
	IV.3.6.2	Empirical Results on Historical ETL	195
	IV.3.6.3	Disaggregation of Historical ETL	197
IV.3.7		Summary and Conclusions	198
IV.4		Monte Carlo VaR	201
IV.4.1		Introduction	201
IV.4.2		Basic Concepts	203
	IV.4.2.1	Pseudo-Random Number Generation	203
	IV.4.2.2	Low Discrepancy Sequences	204
	IV.4.2.3	Variance Reduction	206
	IV.4.2.4	Sampling from Univariate Distributions	211
	IV.4.2.5	Sampling from Multivariate Distributions	213
	IV.4.2.6	Introduction to Monte Carlo VaR	213
IV.4.3		Modelling Dynamic Properties in Risk Factor Returns	215
	IV.4.3.1	Multi-Step Monte Carlo	215
	IV.4.3.2	Volatility Clustering and Mean Reversion	218
	IV.4.3.3	Regime Switching Models	223
IV.4.4		Modelling Risk Factor Dependence	225
	IV.4.4.1	Multivariate Distributions for i.i.d. Returns	226
	IV.4.4.2	Principal Component Analysis	230
	IV.4.4.3	Behavioural Models	232
	IV.4.4.4	Case Study: Modelling the Price – Volatility Relationship	232
IV.4.5		Monte Carlo Value at Risk for Linear Portfolios	233
	IV.4.5.1	Algorithms for VaR and ETL	235
	IV.4.5.2	Cash-Flow Portfolios: Copula VaR and PC VaR	236
	IV.4.5.3	Equity Portfolios: ‘Crash’ Scenario VaR	239
	IV.4.5.4	Currency Portfolios: VaR with Volatility Clustering	241
IV.4.6		Summary and Conclusions	244
IV.5		Value at Risk for Option Portfolios	247
IV.5.1		Introduction	247
IV.5.2		Risk Characteristics of Option Portfolios	250
	IV.5.2.1	Gamma Effects	250
	IV.5.2.2	Delta and Vega Effects	252
	IV.5.2.3	Theta and Rho Effects	253
	IV.5.2.4	Static and Dynamic VaR Estimates	254
IV.5.3		Analytic Value-at-Risk Approximations	257
	IV.5.3.1	Delta Approximation and Delta–Normal VaR	257
	IV.5.3.2	P&L Distributions for Option Portfolios	259
	IV.5.3.3	Delta–Gamma VaR	260

IV.5.4	Historical Value at Risk for Option Portfolios	262
IV.5.4.1	VaR and ETL with Exact Revaluation	263
IV.5.4.2	Dynamically Hedged Option Portfolios	272
IV.5.4.3	Greeks Approximation	273
IV.5.4.4	Historical VaR for Path-Dependent Options	278
IV.5.4.5	Case Study: Historical VaR for an Energy Options Trading Book	280
IV.5.5	Monte Carlo Value at Risk for Option Portfolios	282
IV.5.5.1	Monte Carlo VaR and ETL with Exact Revaluation	283
IV.5.5.2	Risk Factor Models for Simulating Options VaR	287
IV.5.5.3	Capturing Non-normality and Non-linearity	287
IV.5.5.4	Capturing Gamma, Vega and Theta Effects	290
IV.5.5.5	Path Dependency	292
IV.5.5.6	Option Portfolios with a Single Underlying	296
IV.5.5.7	Option Portfolios with Several Underlyings	299
IV.5.5.8	Case Study: Monte Carlo VaR for an Energy Options Trading Book	302
IV.5.6	Summary and Conclusions	307
IV.6	Risk Model Risk	311
IV.6.1	Introduction	311
IV.6.2	Sources of Risk Model Risk	313
IV.6.2.1	Risk Factor Mapping	314
IV.6.2.2	Risk Factor or Asset Returns Model	319
IV.6.2.3	VaR Resolution Method	322
IV.6.2.4	Scaling	323
IV.6.3	Estimation Risk	324
IV.6.3.1	Distribution of VaR Estimators in Parametric Linear Models	324
IV.6.3.2	Distribution of VaR Estimators in Simulation Models	328
IV.6.4	Model Validation	332
IV.6.4.1	Backtesting Methodology	332
IV.6.4.2	Guidelines for Backtesting from Banking Regulators	335
IV.6.4.3	Coverage Tests	337
IV.6.4.4	Backtests Based on Regression	340
IV.6.4.5	Backtesting ETL Forecasts	344
IV.6.4.6	Bias Statistics for Normal Linear VaR	345
IV.6.4.7	Distribution Forecasts	348
IV.6.4.8	Some Backtesting Results	351
IV.6.5	Summary and Conclusions	353
IV.7	Scenario Analysis and Stress Testing	357
IV.7.1	Introduction	357
IV.7.2	Scenarios on Financial Risk Factors	359
IV.7.2.1	Broad Categorization of Scenarios	360
IV.7.2.2	Historical Scenarios	361
IV.7.2.3	Hypothetical Scenarios	362
IV.7.2.4	Distribution Scenario Design	366

IV.7.3	Scenario Value at Risk and Expected Tail Loss	367
IV.7.3.1	Normal Distribution Scenarios	367
IV.7.3.2	Compound Distribution Scenario VaR	371
IV.7.3.3	Bayesian VaR	375
IV.7.4	Introduction to Stress Testing	378
IV.7.4.1	Regulatory Guidelines	379
IV.7.4.2	Systemic Risk	381
IV.7.4.3	Stress Tests Based on Worst Case Loss	381
IV.7.5	A Coherent Framework for Stress Testing	384
IV.7.5.1	VaR Based on Stressed Covariance Matrices	385
IV.7.5.2	Generating Hypothetical Covariance Matrices	388
IV.7.5.3	Stress Tests Based on Principal Component Analysis	390
IV.7.5.4	Modelling Liquidity Risk	392
IV.7.5.5	Incorporating Volatility Clustering	397
IV.7.6	Summary and Conclusions	398
IV.8	Capital Allocation	401
IV.8.1	Introduction	401
IV.8.2	Minimum Market Risk Capital Requirements for Banks	403
IV.8.2.1	Basel Accords	404
IV.8.2.2	Banking and Trading Book Accounting	405
IV.8.2.3	Regulatory Framework for Market Risk	406
IV.8.2.4	Internal Models	408
IV.8.2.5	Standardized Rules	411
IV.8.2.6	Incremental Risk Charge	412
IV.8.3	Economic Capital Allocation	416
IV.8.3.1	Measurement of Economic Capital	416
IV.8.3.2	Banking Applications of Economic Capital	421
IV.8.3.3	Aggregation Risk	422
IV.8.3.4	Risk Adjusted Performance Measures	424
IV.8.3.5	Optimal Allocation of Economic Capital	430
IV.8.4	Summary and Conclusions	433
