
Designing Evolvable Web APIs with ASP.NET

*Glenn Block, Pablo Cibraro, Pedro Felix,
Howard Dierking, and Darrel Miller*

Table of Contents

Foreword.....	xiii
Preface.....	xvii
1. The Internet, the World Wide Web, and HTTP.....	1
Web Architecture	2
Resource	3
URI	4
Cool URIs	5
Representation	5
Media Type	5
HTTP	8
Moving Beyond HTTP 1.1	8
HTTP Message Exchange	8
Intermediaries	10
Types of Intermediaries	11
HTTP Methods	12
Headers	15
HTTP Status Codes	16
Content Negotiation	17
Caching	17
Authentication	20
Authentication Schemes	21
Additional Authentication Schemes	22
Conclusion	22
2. Web APIs.....	23
What Is a Web API?	23
What About SOAP Web Services?	23
Origins of Web APIs	24

The Web API Revolution Begins	24
Paying Attention to the Web	24
Guidelines for Web APIs	25
Domain-Specific Media Types	25
Media Type Profiles	26
Multiple Representations	27
API Styles	29
The Richardson Maturity Model	29
RPC (RMM Level 0)	30
Resources (RMM Level 1)	31
HTTP VERBS (RMM Level 2)	33
Crossing the Chasm Toward Resource-Centric APIs	36
Hypermedia (RMM Level 3)	36
REST	41
REST Constraints	41
Conclusion	43
3. ASP.NET Web API 101.....	45
Core Scenarios	45
First-Class HTTP Programming	46
Symmetric Client and Server Programming Experience	48
Flexible Support for Different Formats	48
No More “Coding with Angle Brackets”	48
Unit Testability	49
Multiple Hosting Options	50
Getting Started with ASP.NET Web API	50
Exploring a New Web API Project	54
WebApiConfig	54
ValuesController	56
“Hello Web API!”	58
Creating the Service	58
The Client	65
The Host	65
Conclusion	66
4. Processing Architecture.....	67
The Hosting Layer	70
Message Handler Pipeline	71
Route Dispatching	73
Controller Handling	75
The ApiController Base Class	75

Conclusion	82
5. The Application.....	83
Why Evolvable?	84
Barriers to Evolution	85
What Is the Cost?	86
Why Not Just Version?	88
Walking the Walk	91
Application Objectives	91
Goals	92
Opportunity	92
Information Model	93
Subdomains	93
Related Resources	94
Attribute Groups	95
Collections of Attribute Groups	96
Information Model Versus Media Type	96
Collections of Issues	98
Resource Models	98
Root Resource	98
Search Resources	98
Collection Resources	99
Item Resources	99
Conclusion	102
6. Media Type Selection and Design.....	103
Self-Description	103
Types of Contracts	104
Media Types	104
Primitive Formats	105
Popular Formats	107
New Formats	108
Hypermedia Types	110
Media Type Explosion	110
Generic Media Types and Profiles	110
Other Hypermedia Types	115
Link Relation Types	116
Semantics	116
Replacing Embedded Resources	118
Indirection Layer	119
Reference Data	119
Workflow	120

Syntax	121
A Perfect Combination	124
Designing a New Media Type Contract	124
Selecting a Format	125
Enabling Hypermedia	126
Optional, Mandatory, Omitted, Applicable	126
Embedded Versus External Metadata	127
Extensibility	128
Registering the Media Type	129
Designing New Link Relations	130
Standard Link Relations	130
Extension Link Relations	131
Embedded Link Relations	132
Registering the Link Relation	132
Media Types in the Issue Tracking Domain	132
List Resources	133
Item Resources	135
Discovery Resource	136
Search Resource	137
Conclusion	137
7. Building the API.....	139
The Design	139
Getting the Source	140
Building the Implementation Using BDD	140
Navigating the Solution	141
Packages and Libraries	141
Self-Host	142
Models and Services	143
Issue and Issue Store	143
IssueState	144
IssuesState	145
Link	146
IssueStateFactory	147
LinkFactory	148
IssueLinkFactory	149
Acceptance Criteria	151
Feature: Retrieving Issues	154
Retrieving an Issue	156
Retrieving Open and Closed Issues	159
Retrieving an Issue That Does Not Exist	161
Retrieving All Issues	162

Retrieving All Issues as Collection+Json	165
Searching Issues	167
Feature: Creating Issues	169
Feature: Updating Issues	172
Updating an Issue	172
Updating an Issue That Does Not Exist	174
Feature: Deleting Issues	175
Deleting an Issue	175
Deleting an Issue That Does Not Exist	177
Feature: Processing Issues	177
The Tests	177
The Implementation	178
Conclusion	179
8. Improving the API.....	181
Acceptance Criteria for the New Features	181
Implementing the Output Caching Support	183
Adding the Tests for Output Caching	184
Implementing Cache Revalidation	187
Implementing Conditional GETs for Cache Revalidation	188
Conflict Detection	191
Implementing Conflict Detection	191
Change Auditing	194
Implementing Change Auditing with Hawk Authentication	195
Tracing	199
Implementing Tracing	200
Conclusion	203
9. Building the Client.....	205
Client Libraries	206
Wrapper Libraries	206
Links as Functions	210
Application Workflow	216
Need to Know	216
Clients with Missions	220
Client State	223
Conclusion	224
10. The HTTP Programming Model.....	227
Messages	228
Headers	233
Message Content	239

Consuming Message Content	240
Creating Message Content	243
Conclusion	251
11. Hosting.....	253
Web Hosting	254
The ASP.NET Infrastructure	254
ASP.NET Routing	257
Web API Routing	259
Global Configuration	261
The Web API ASP.NET Handler	263
Self-Hosting	266
WCF Architecture	267
The HttpSelfHostServer Class	269
The HttpSelfHostConfiguration Class	270
URL Reservation and Access Control	272
Hosting Web API with OWIN and Katana	273
OWIN	273
The Katana Project	275
Web API Configuration	277
Web API Middleware	278
The OWIN Ecosystem	281
In-Memory Hosting	282
Azure Service Bus Host	283
Conclusion	288
12. Controllers and Routing.....	289
HTTP Message Flow Overview	289
The Message Handler Pipeline	290
Dispatcher	294
HttpControllerDispatcher	295
Controller Selection	296
Controller Activation	300
The Controller Pipeline	301
ApiController	301
ApiController Processing Model	302
Conclusion	314
13. Formatters and Model Binding.....	317
The Importance of Models in ASP.NET Web API	317
How Model Binding Works	319
Built-In Model Binders	322

The ModelBindingParameterBinder Implementation	322
Value Providers	323
Model Binders	326
Model Binding Against URIs Only	329
The FormatterParameterBinder Implementation	329
Default HttpParameterBinding Selection	335
Model Validation	335
Applying Data Annotation Attributes to a Model	335
Querying the Validation Results	336
Conclusion	338
14. HttpClient.....	341
HttpClient Class	341
Lifecycle	341
Wrapper	342
Multiple Instances	343
Thread Safety	343
Helper Methods	343
Peeling Off the Layers	344
Completed Requests Don't Throw	344
Content Is Everything	344
Cancelling the Request	346
SendAsync	347
Client Message Handlers	347
Proxying Handlers	349
Fake Response Handlers	350
Creating Resuable Response Handlers	352
Conclusion	353
15. Security.....	355
Transport Security	355
Using TLS in ASP.NET Web API	357
Using TLS with IIS Hosting	357
Using TLS with Self-Hosting	359
Authentication	360
The Claims Model	360
Retrieving and Assigning the Current Principal	365
Transport-Based Authentication	366
Server Authentication	367
Client Authentication	370
The HTTP Authentication Framework	377
Implementing HTTP-Based Authentication	379

Katana Authentication Middleware	380
Active and Passive Authentication Middleware	385
Web API Authentication Filters	386
Token-Based Authentication	389
The Hawk Authentication Scheme	396
Authorization	398
Authorization Enforcement	400
Cross-Origin Resource Sharing	403
CORS Support on ASP.NET Web API	406
Conclusion	409
16. The OAuth 2.0 Authorization Framework.....	411
Client Applications	414
Accessing Protected Resources	416
Obtaining Access Tokens	417
Authorization Code Grant	419
Scope	422
Front Channel Versus Back Channel	423
Refresh Tokens	425
Resource Server and Authorization Server	426
Processing Access Tokens in ASP.NET Web API	428
OAuth 2.0 and Authentication	430
Scope-Based Authorization	433
Conclusion	434
17. Testability.....	437
Unit Tests	437
Unit Testing Frameworks	438
Getting Started with Unit Testing in Visual Studio	438
xUnit.NET	440
The Role of Unit Testing in Test-Driven Development	441
Unit Testing an ASP.NET Web API Implementation	445
Unit Testing an ApiController	446
Unit Testing a MediaTypeFormatter	452
Unit Testing an HttpResponseMessage	456
Unit Testing an ActionFilterAttribute	456
Unit Testing Routes	460
Integration Tests in ASP.NET Web API	462
Conclusion	464
A. Media Types.....	465

B. HTTP Headers.....	467
C. Content Negotiation.....	471
D. Caching in Action.....	475
E. Authentication Workflows.....	481
F. Media Type Specification for application/issue+json.....	485
G. Public-Key Cryptography and Certificates.....	487
Index.....	497
