2014 Eighth International Conference on Software Security and Reliability

(SERE 2014)

San Francisco, California
30 June – 2 July 2014
2014 Eighth International Conference on Software Security and Reliability

SERE 2014

Table of Contents

Message from the Steering Committee Chair..........................................................................................viii
Message from the Program Chair.............................................................................................................x
Steering Committee....................................................................................................................................xi
Organizing Committee...............................................................................................................................xii
Program Committee..................................................................................................................................xiii

Fourth International Workshop on Safety
and Security in Cyber-Physical Systems -

Program Committee...................................................................................................................................xv
External Reviewers.....................................................................................................................................xvi
Keynote Abstracts....................................................................................................................................xvii

Session II-A: Failure and Fault Prediction

A Diversity Model Based on Failure Distribution and Its Application in Safety Cases .................................................................1
Luping Chen and John May

The Influence of Developer Quality on Software Fault-Proneness Prediction .................................................11
Yangsong Wu, Yibiao Yang, Yangyang Zhao, Hongmin Lu, Yuming Zhou, and Baowen Xu

A Two-Stage Data Preprocessing Approach for Software Fault Prediction ...................................................20
Jiaqiang Chen, Shulong Liu, Wangshu Liu, Xiang Chen, Qing Gu, and Daoxu Chen
Session II-B: System Performance and Accuracy Analysis

High Performance Java Card Operating System .................................................................30

  Mohammad R. Eletriby, Mohamed Sobh, Ayman M. Bahaa-Eldin,
  and Hossam M.A. Fahmy

Providing Hardware Redundancy for Highly Available Services in Virtualized Environments ..................................................................................................................40

  Azadeh Jahanbanifar, Ferhat Khendek, and Maria Toeroe

  Haipeng Cai, Raul Santelices, and Tianyu Xu

Session II-C: Mobile Security

AppMark: A Picture-Based Watermark for Android Apps ..................................................58

  Yingjun Zhang and Kai Chen

ADAutomation: An Activity Diagram Based Automated GUI Testing Framework for Smartphone Applications .....................................................................................................68

  Ang Li, Zishan Qin, Mingsong Chen, and Jing Liu

BinClone: Detecting Code Clones in Malware .....................................................................78

  Mohammad Reza Farhadi, Benjamin C.M. Fung, Philippe Charland,
  and Mourad Debbabi

Session III-A: Software Testing I

Security Test Generation by Answer Set Programming .......................................................88

  Philipp Zech, Michael Felderer, Basel Katt, and Ruth Breu

Automated Coverage-Driven Test Data Generation Using Dynamic Symbolic Execution .................................................................................................................................98

  Ting Su, Geguang Pu, Bin Fang, Jifeng He, Jun Yan, Siyuan Jiang,
  and Jianjun Zhao

Rule-Based Test Input Generation from Bytecode ..............................................................108

  Weifeng Xu, Tao Ding, and Dianxiang Xu

Automatic Test Data Generation for Unit Testing to Achieve MC/DC Criterion .................118

  Tianyong Wu, Jun Yan, and Jian Zhang

Session IV-A: Software Testing II

TaaS (Testing-as-a-Service) Design for Combinatorial Testing .........................................127

  Wei-Tek Tsai, Guanqiu Qi, Lian Yu, and Jerry Gao

Generating Test Cases for Context-Aware Applications Using Bigraphs ..........................137

  Lian Yu, Wei-Tek Tsai, Yanbing Jiang, and Jerry Gao
SeTGaM: Generalized Technique for Regression Testing Based on UML/OCL Models .................................................................147
   Elizabeta Fourneret, Jérôme Cantenot, Fabrice Bouquet, Bruno Legeard, and Julien Botella
Effective Regression Testing Using Requirements and Risks .................................................................157
   Charitha Hettiarachchi, Hyunsook Do, and Byoungju Choi

**Session VII-A: Format Specification and Strategy Analysis**
Traceability-Based Formal Specification Inspection .................................................................167
   Mo Li and Shaoying Liu
Specification of Dynamic Fault Tree Concepts with Stochastic Petri Nets ..................................................177
   Lena Herscheid and Peter Tröger
Game-Theoretic Strategy Analysis for Data Reliability Management in Cloud Storage Systems ..............187
   Chung-Yi Lin and Wen-Guey Tzeng

**Session VIII-A: System Quality & Network Security**
Fast Discovery of VM-Sensitive Divergence Points with Basic Block Comparison .................................................................196
   Yen-Ju Liu, Chong-Kuan Chen, Michael Cheng Yi Cho, and Shiuhpyng Shieh
Using Network Tainting to Bound the Scope of Network Ingress Attacks ..................................................206
   Peter Mell and Richard E. Harang
Automatic Numerical Analysis Based on Infinite-Precision Arithmetic .................................................................216
   Shuai Wei, Enyi Tang, Tianyu Liu, Norbert Th. Müller, and Zhenyu Chen

**Session X-A: System Security**
A Modal Model of Stuxnet Attacks on Cyber-physical Systems: A Matter of Trust .................................................................225
   Gerry Howser and Bruce McMillin
Reliable Repair Mechanisms with Low Connection Cost for Code Based Distributed Storage Systems .................................................................235
   Hsiao-Ying Lin, Li-Ping Tung, and Bao-Shuh P. Lin
Collision Analysis of Safety Devices to Prevent Hazards in Safety Critical Systems .................................................................245
   Jang-Jin Kwon, Doohwan Kim, Jae-Jin Park, and Jang-Eui Hong

**Author Index** ............................................................................................................................................255
