CORRECTION

Correction: F-Formation Detection: Individuating Free-Standing Conversational Groups in Images

Francesco Setti, Chris Russell, Chiara Bassetti, Marco Cristani

There is an error in the first sentence of the Evaluation Metrics subsection of the Experiments section. The correct sentence is: As accuracy measures, we adopt the metrics proposed in [3] and extended in [12]: we consider a group as correctly estimated if at least $\lceil (T \cdot |G|) \rceil$ of their members are found by the grouping method and correctly detected by the tracker, and if no more than $(1-T) \cdot |G|$ false subjects (of the detected tracks) are identified, where $|G|$ is the cardinality of the labelled group G, and $T \in [0,1]$ is an arbitrary threshold, called tolerance threshold.
