EDITORIAL

ORIGINAL CONTRIBUTIONS

208 Invited Commentary: On the Road to Improved Exposure Assessment using Geographic Information Systems. Mary H. Ward and Daniel Wartenberg

232 Sun Exposure, Diet, and Melanoma in Hawaii Caucasians. Loïc Le Marchand, Barbara S. Saltman, Jean H. Hankin, Lynne R. Willems, Adrian A. Frankle, Steven J. Morris, and Laurence N. Kolonel

246 Genetic and Environmental Influences on Variation in Balance Performance among Female Twin Pairs Aged 21–82 Years. Natalie El Haber, Keith D. Hill, Anne-Marie T. Cassano, Lynda M. Paton, Robert J. MacInnis, James S. Cui, John L. Hopper, and John D. Wark

257 The Relation between Perceived Unfair Treatment and Blood Pressure in a Racially/Ethnically Diverse Sample of Women. Charlotte Brown, Karen A. Matthews, Joyce T. Bromberger, and Yuefang Chang

263 The Association among Smoking, Heavy Drinking, and Chronic Kidney Disease. Anoop Shankar, Ronald Klein, and Barbara E. K. Klein

Continued on Inside Front Cover

The Division of Epidemiology and Community Health, School of Public Health, University of Minnesota, invites applications for multiple tenure-track, tenured or non-tenure-track Assistant or Associate Professors in the area of chronic disease epidemiology. As the largest unit with over 45 primary faculty, over 300 graduate students and more than $30 million annually in sponsored research grants, the Division plays a major role in the School. The Division (Website http://www.epi.umn.edu) has a distinguished record of research and teaching. It provides a rich and collaborative environment for the investigation of chronic disease. Division research is a robust blend of observational and intervention studies aimed at improving the public health and engaging a multidisciplinary integration of epidemiology, biology, and behavioral science. The educational program includes majors in Epidemiology, Community Health Education, Maternal/Child Health, Public Health Nutrition, and Clinical Research. The Division offers programs leading to the MPH, MS, and PhD degrees, and has active pre- and post-doctoral training.

Requirements include an earned academic or professional doctorate. We are particularly interested in epidemiologists or MDs who have research and teaching experience in one or preferably more of the following interests: etiology of chronic diseases, e.g. diabetes, congestive heart failure and peripheral vascular disease; understudied populations, e.g. the elderly and minority populations; genetic epidemiology; clinical research and trials. Evidence of potential for obtaining independent external research funding is highly desirable, as well as expertise in new models of disease causation, and ability to work effectively with our core cardiovascular disease faculty. Rank and type of appointment will depend on level of accomplishment in these areas. Salary will be competitive and commensurate with qualifications and background.

Primary research responsibilities will be to develop an independent program of research in the areas listed above that dovetails with and expands upon the expertise represented among current faculty. It is expected that the successful candidates will both lead their own research efforts and collaborate with other faculty as co-investigators on new grant initiatives. Teaching responsibilities for the tenure-track and tenured positions include teaching in courses in chronic disease epidemiology, genetic epidemiology, or clinical research. Advising masters, doctoral and post-doctoral students is also expected. Teaching responsibilities will be limited for the non-tenure-track position.

The search will remain open until the positions are filled. Applications with cover letter, CV and a list of at least 3 references should be sent to: Ms. Kathy Ramel, Division of Epidemiology & Community Health, School of Public Health, University of Minnesota, 1300 South Second St., Suite 300, Minneapolis, MN 55454-1015. Please reference job #133549.

The University of Minnesota is an equal opportunity educator and employer and specifically invites and encourages applications from women and minorities.
