2010 13th IEEE International Symposium on Object/Component/Service-Oriented Real-Time Distributed Computing (ISORC 2010)

Carmona, Spain
5 – 6 May 2010
Table of Contents

Message from the Symposium Co-chairs........................................................................................................................................viii
Message from the Program Co-chairs................................................................................................................................................ix
Organizing Committee........................................................................................................................................................................x
International Program Committees........................................................................................................................................................xvi
Secondary Reviewers...........................................................................................................................................................................xix

Session 1: Distributed Real-Time Systems

Dynamic Policy-Driven Quality of Service in Service-Oriented Systems .........................................................................................1
   Joseph P. Loyall, Matthew Gillen, Aaron Paulos, James Edmondson, Pooja Varshneya,
   Douglas C. Schmidt, Larry Bunch, Marco Carvalho, and Andrew Martignoni III
OASIS: A Service-Oriented Architecture for Dynamic Instrumentation of Enterprise Distributed Real-Time and Embedded Systems .................................................................................................................................10
   James Hill, Hunt Sutherland, Paul Stodinger, Thomas Silveria, Douglas C. Schmidt,
   John Slaby, and Nikita Visnevski
A Scheme for Reliable Real-Time Messaging with Bounded Delays .................................................................................................18
   K.H. Kim, Jing Qian, Zhen Zhang, Qian Zhou, Kyung-Deok Moon, Jun-Hee Park,
   Kwang-Roh Park, and Doo-Hyun Kim

Session 2: Time-Triggered Systems

Energy-Saving Mechanisms in the Time-Triggered Architecture ........................................................................................................28
   Hermann Kopetz
The RTSC: Leveraging the Migration from Event-Triggered to Time-Triggered Systems ................................................................................34
   Fabian Scheler and Wolfgang Schröder-Preikschat
Executable Time-Triggered Model (E-TTM) for Real-Time Control Systems .............................................................................................42
   Jon Perez, Antonio Perez, and Roman Obermaisser

Session 3: Model-Based Development

A MDE-Based Optimisation Process for Real-Time Systems ..................................................................................................................50
   Olivier Gilles and Jérôme Hugues
Model-Driven Runtime Resource Predictions for Advanced Mechatronic Systems
with Dynamic Data Structures ..............................................................58
  Stefan Henkler, Simon Oberthür, Holger Giese, and Andreas Seibel

Model-Based Programming of Modular Robots ....................................66
  David Arney, Sebastian Fischmeister, Insup Lee, Yoshihito Takashima, and Mark Yim

Does Code Generation Promote or Prevent Optimizations? ....................75
  Asma Charfi, Chokri Mraidha, Sébastien Gérard, François Terrier, and Pierre Boulet

Session 4: Dependable and Secure Computing

Design and Performance Evaluation of Binary Code Packing for Protecting Embedded Software against Reverse Engineering ..................................................80
  Min-Jae Kim, Jin-Young Lee, Hye-Young Chang, SeongJe Cho, Yongsu Park,
  Minkyu Park, and Philip A. Wilsey

Architectural and Behavioral Modeling with AADL for Fault Tolerant Embedded Systems .................................................................87
  Gilles Lasnier, Thomas Robert, Laurent Pautet, and Fabrice Kordon

Model-Driven Development of a Web Service-Oriented Architecture and Security Policies .................................................................92
  Juan Pedro Silva Gallino, Miguel A. de Miguel, Javier Fernández Briones,
  and Alejandro Alonso

Reliable Event Dissemination over Wide-Area Networks without Severe Performance Fluctuations .................................................................97
  Christian Esposito, Domenico Cotroneo, and Stefano Russo

Investigating the Effects of Schedulability Conditions on the Power Efficiency of Task Scheduling in an Embedded System ................................102
  Mohsen Bashiri and Seyed Ghassem Miremadi

Session 5a: Timing Analysis

WCET-Driven Cache-Aware Memory Content Selection ................................107
  Sascha Plazar, Paul Lokuciejewski, and Peter Marwedel

Multi-objective Exploration of Compiler Optimizations for Real-Time Systems ..........................................................115
  Paul Lokuciejewski, Sascha Plazar, Heiko Falk, Peter Marwedel, and Lothar Thiele

Avoiding Timing Anomalies Using Code Transformations ........................123
  Albrecht Kadlec, Raimund Kirner, and Peter Puschner

Session 5b: Component-Based Architectures

Real-Time-Component Based Software Architecture for QoS-adaptive Networked Multimedia Applications ..................................................133
  Juan A. Colmenares, K.H. Kim, Zhen Zhang, Chadeok Lim, and Kee-Wook Rim

A Real-Time Component Framework: Experience with CCM and ARINC-653 ..........................................................143
  Abhishek Dubey, Gabor Karsai, Robert Ker esk enyi, and Nagabhushan Mahadevan

Wheeled Inverted Pendulum with Embedded Component System: A Case Study ..........................................................151
  Takuya Azumi, Hiroaki Takada, Takayuki Ukai, and Hiroshi Oyama
Session 6a: Configuration and Adaptation

AUTOSAR Based Automatic GUI Generation ................................................................. 156  
Nan Li, Hong Li, Jian Wu, Xiaofeng Zhong, Zheng Sun, and Wei Bao
Implementing and Evaluating the AHS Organic Middleware - A First Approach .................................................. 163  
Alexander von Renteln and Uwe Brinkschulte
Non-regular Adaptation of Services Using Model Checking ........................................ 170  
Hsin-Hung Lin, Toshiaki Aoki, and Takuya Katayama
On-the-Fly Adaptation of Data Stream Queries .......................................................... 175  
Bernhard Wolf and Ingo Behrens
State-Based Search Strategy in Unstructured P2P ....................................................... 180  
Kaigui Wu, Changze Wu, Lu Liu, and Jie Xu

Session 6b: Multi-core Platforms

Understanding and Effectively Preventing the ABA Problem in Descriptor-Based Lock-Free Designs .......................................................... 185  
Damian Dechev, Peter Pirkelbauer, and Bjarne Stroustrup
RTOS Support for Parallel Execution of Hard Real-Time Applications on the MERASA Multi-core Processor .................................................. 193  
Julian Wolf, Mike Gerdes, Florian Kluge, Sascha Uhlig, Jörg Mische, Stefan Metzlaff, Christine Rochange, Hugues Cassé, Pascal Sainrat, and Theo Ungerer
A Lightweight Monitoring Service for Multi-core Embedded Systems .......................................................... 202  
Hiromasa Shimada, Alexandre Courbot, Yuki Kinebuchi, and Tatsuo Nakajima
A System-on-a-Chip Platform for Mixed-Criticality Applications .................................................. 210  
Armin Wasicek, Christian El-Salloum, and Hermann Kopetz

Session 7a: RTSJ

An Admission Control Protocol for Real-Time OSGi .................................................. 217  
Thomas Richardson and Andy Wellings
Towards Propagation of Non-functional Information in Distributed Real-Time Java .................................................. 225  
P. Basanta-Val, M. García-Valls, and I. Estévez-Ayres
ServiceDDS: A Framework for Real-Time P2P Systems Integration .................................................. 233  
J. A. Dianes, Manuel Díaz, and B. Rubio

Session 7b: Validation and Verification

Early Modeling of Linux-Based RTOS Platforms in a SystemC Time-Approximate Co-simulation Environment .................................................. 238  
Hector Posadas, Eugenio Villar, Dominique Ragot, and Marcos Martinez
Test Case Generation for Non-functional and Functional Testing of Services .................................................. 245  
Simone Meixler and Uwe Brinkschulte
VIS Analyzer: A Visual Assistant for VIS Verification and Analysis .................................................. 250  
Sehun Jeong, Junbeom Yoo, and Sungdeok Cha

Author Index .......................................................... 255
