Palgrave Advanced Texts in Econometrics is a series that provides coverage of econometric techniques, applications and perspectives at an advanced research level. It will include research monographs that bring current research to a wide audience; perspectives on econometric themes that develop a long term view of key methodological advances; textbook style presentations of advanced teaching and research topics. An over-riding theme of this series is clear presentation and accessibility through excellence in exposition, so that it will appeal not only to econometricians, but also to professional economists and, particularly, to Ph.D students and MSc students undertaking dissertations. The texts will include developments in theoretical and applied econometrics across a wide range of topics and areas including time series analysis, panel data methods, spatial econometrics and financial econometrics.
