**Genome-wide analysis of self-renewal in Drosophila neural stem cells by transgenic RNAi.**
Neumüller RA, Richter C, Fischer A, Novatchkova M, Neumüller KG, Knoblich JA.
[Abstract]

**TrpA1 regulates thermal nociception in Drosophila.**
[Abstract]

*In vivo RNAi screen reveals neddylation genes as novel regulators of Hedgehog signaling.*
[Abstract]

Spalt mediates an evolutionarily conserved switch to fibrillar muscle fate in insects.
Schönbauer C, Distler J, Jährling N, Radolf M, Dodt HU, Frasch M, Schnorrer F.
[Abstract]

Local BMP receptor activation at adherens junctions in the Drosophila germline stem cell niche.
Michel M, Raabe I, Kupinski AP, Pérez-Palencia R, Bökel C.
[Abstract]

Where gene discovery turns into systems biology: genome-scale RNAi screens in Drosophila.
Neumüller RA, Perrimon N.
[Abstract]

RNAi knockdown of dRNaseZ, the Drosophila homolog of ELAC2, impairs growth of mitotic and endoreplicating tissues.
Xie X, Dubrovskaya VA, Dubrovsky EB.
[Abstract]

Dendrites have a rapid program of injury-induced degeneration that is molecularly distinct from developmental pruning.
Tao J, Rolls MM.
[Abstract]
The COMPASS family of H3K4 methylases in Drosophila.
[Abstract]

Coordinated regulation of niche and stem cell precursors by hormonal signaling.
Gancz D, Lengil T, Gilboa L.
[Abstract]

Cofilin regulator 14-3-3zeta is an evolutionarily conserved protein required for phagocytosis and microbial resistance.
[Abstract]

Automated protein-DNA interaction screening of Drosophila regulatory elements.
[Abstract]

Yki/YAP, Sd/TEAD and Hth/MEIS control tissue specification in the Drosophila eye disc epithelium.
Zhang T, Zhou Q, Pignoni F.
[Abstract]

A systematic analysis of Drosophila TUDOR domain-containing proteins identifies Vreteno and the Tdrd12 family as essential primary piRNA pathway factors.
Handler D, Olivieri D, Novatchkova M, Gruber FS, Meixner K, Mechtler K, Stark A, Sachidanandam R, Brennecke J.
[Abstract]

The histone deacetylase Rpd3 regulates the heterochromatin structure of Drosophila telomeres.
Burgio G, Cipressa F, Ingrassia AM, Cenci G, Corona DF.
[Abstract]

Regulation of Hippo signaling by Jun kinase signaling during compensatory cell proliferation and regeneration, and in neoplastic tumors.
[Abstract]

The microRNA pathway regulates the temporal pattern of Notch signaling in Drosophila follicle cells.
[Abstract]

The UNC-45 chaperone is critical for establishing myosin-based myofibrillar organization and cardiac contractility in the Drosophila heart model.
[Abstract]

Functional screening of Alzheimer pathology genome-wide association signals in Drosophila.
[Abstract]

NEMO kinase contributes to core period determination by slowing the pace of the Drosophila circadian oscillator.
[Abstract]

Overexpression of Dsk2/dUbqIn results in severe developmental defects and lethality in Drosophila melanogaster that can be rescued by overexpression of the pS4/Rpn10/S5a proteasomal subunit.
[Abstract]

ATP-sensitive potassium channel (K(ATP))-dependent regulation of cardiotropic viral infections.
[Abstract]

A SNX3-dependent retromer pathway mediates retrograde transport of the Wnt sorting receptor Wntless and is required for Wnt secretion.
The NAB-Brk signal bifurcates at JNK to independently induce apoptosis and compensatory proliferation.

Neuronal remodeling and apoptosis require VCP-dependent degradation of the apoptosis inhibitor DIAP1.

Intrinsic epigenetic factors cooperate with the steroid hormone ecdysone to govern dendrite pruning in Drosophila.

JAK/STAT and the GATA factor Pannier control hemocyte maturation and differentiation in Drosophila.

Drosophila Inducer of MEiosis 4 (IME4) is required for Notch signaling during oogenesis.

Histone H3K9 trimethylase Eggless controls germline stem cell maintenance and differentiation.

Differential adhesion and actomyosin cable collaborate to drive Echinoid-mediated cell sorting.

Two frizzled planar cell polarity signals in the Drosophila wing are differentially organized by the Fat/Dachsous pathway.
Hogan J, Valentine M, Cox C, Doyle K, Collier S.
The ER stress factor XBP1s prevents amyloid-beta neurotoxicity.
Casas-Tinto S, Zhang Y, Sanchez-Garcia J, Gomez-Velazquez M, Rincon-Limas DE, Fernandez-Funez P.
[Abstract]

A hormone-dependent module regulating energy balance.
[Abstract]

Zyxin links fat signaling to the hippo pathway.
Rauskolb C, Pan G, Reddy BV, Oh H, Irvine KD.
[Abstract]

Insulin production and signaling in renal tubules of Drosophila is under control of tachykinin-related peptide and regulates stress resistance.
Söderberg JA, Birse RT, Nässel DR.
[Abstract]

Pre and postsynaptic roles for Drosophila CASK.
Chen K, Featherstone DE.
[Abstract]

Systematic expression and loss-of-function analysis defines spatially restricted requirements for Drosophila RhoGEFs and RhoGAPs in leg morphogenesis.
Greenberg L, Hatini V.
Mech Dev. 2011 Jan-Feb;128(1-2):5-17.
[Abstract]

Socially-responsive gene expression in male Drosophila melanogaster is influenced by the sex of the interacting partner.
Ellis LL, Carney GE.
[Abstract]
Retromer regulates apical-basal polarity through recycling Crumbs.
Zhou B, Wu Y, Lin X.
Dev Biol. 2011 Dec 1;360(1):87-95.
[Abstract]

Ku70 alleviates neurodegeneration in Drosophila models of Huntington's disease.
Tamura T, Sone M, Iwatsubo T, Tagawa K, Wanker EE, Okazawa H.
[Abstract]

Role of the proteasome in fly models of neurodegeneration.
Yeh CH, Jansen M, Schmidt-Glenewinkel T.
[Abstract]

Genome-level identification of targets of Hox protein Ultrabithorax in Drosophila: novel mechanisms for target selection.
Agrawal P, Habib F, Yelagandula R, Shashidhara LS.
[Abstract]

Glutamine analogs promote cytoophidium assembly in human and Drosophila cells.
Chen K, Zhang J, Tastan ÖY, Deussen ZA, Siswick MY, Liu JL.
[Abstract]

Loss of the Drosophila cell polarity regulator Scribbled promotes epithelial tissue overgrowth and cooperation with oncogenic Ras-Raf through impaired Hippo pathway signaling.
Doggett K, Grusche FA, Richardson HE, Brumby AM.
[Abstract]

Spatial, temporal and molecular hierarchies in the link between death, delamination and dorsal closure.
Muliyil S, Krishnakumar P, Narasimha M.
[Abstract]

Regulation of Drosophila glial cell proliferation by Merlin-Hippo signaling.
Reddy BV, Irvine KD.
Development. 2011 Dec;138(23):5201-12.
[Abstract]
Distinct levels of Notch activity for commitment and terminal differentiation of stem cells in the adult fly intestine.
Perdigoto CN, Schweisguth F, Bardin AJ.
[Abstract]

Phosphorylation of Mad controls competition between wingless and BMP signaling.
Eivers E, Demagny H, Choi RH, De Robertis EM.
[Abstract]

Drosophila Ras/MAPK signalling regulates innate immune responses in immune and intestinal stem cells.
Ragab A, Buechling T, Gesellchen V, Spirohn K, Boettcher AL, Boutros M.
[Abstract]

EGFR, Wingless and JAK/STAT signaling cooperatively maintain Drosophila intestinal stem cells.
[Abstract]

Nitric oxide coordinates metabolism, growth, and development via the nuclear receptor E75.
Cáceres L, Necakov AS, Schwartz C, Kimber S, Roberts IJ, Krause HM.
[Abstract]

Modulating F-actin organization induces organ growth by affecting the Hippo pathway.
EMBO J. 2011 May 10;30(12):2325-35.
[Abstract]

Mutations in TTC19 cause mitochondrial complex III deficiency and neurological impairment in humans and flies.
[Abstract]

Nuclear receptor DHR4 controls the timing of steroid hormone pulses during Drosophila development.
Ou Q, Magico A, King-Jones K.
Control of Drosophila endocycles by E2F and CRL4(CDT2).

Drosophila Smt3 negatively regulates JNK signaling through sequestering Hipk in the nucleus.

Integrin adhesion drives the emergent polarization of active cytoskeletal stresses to pattern cell delamination.
Meghana C, Ramdas N, Hameed FM, Rao M, Shivashankar GV, Narasimha M.

RalB and the exocyst mediate the cellular starvation response by direct activation of autophagosome assembly.

Pan-neuronal knockdown of calcineurin reduces sleep in the fruit fly, Drosophila melanogaster.

Opposing interactions between homothorax and Lobe define the ventral eye margin of Drosophila eye.
Singh A, Tare M, Kango-Singh M, Son WS, Cho KO, Choi KW.

Lee SF, Chen Y, Varan AK, Wee CW, Axford JK, Good RT, Blacket MJ, Reuter C, Partridge L, Hoffmann AA.
Tuberous sclerosis complex and Myc coordinate the growth and division of Drosophila intestinal stem cells.
Amcheslavsky A, Ito N, Jiang J, Ip YT.
[Abstract]

Loss of PI3K blocks cell-cycle progression in a Drosophila tumor model.
Willecke M, Toggweiler J, Basler K.
[Abstract]

Genome-wide screen for modifiers of Parkinson's disease genes in Drosophila.
Fernandes C, Rao Y.
[Abstract]

Synaptic neuropeptide release induced by octopamine without Ca2+ entry into the nerve terminal.
Shakiryanova D, Zettel GM, Gu T, Hewes RS, Levitan ES.
[Abstract]

Ryuda M, Tsuzuki S, Matsumoto H, Oda Y, Tanimura T, Hayakawa Y.
[Abstract]

Opposing roles of PlexinA and PlexinB in axonal branch and varicosity formation.
Neufeld SQ, Hibbert AD, Chen BE.
Mol Brain. 2011 Apr 13;4:15.
[Abstract]

Tomosyn-dependent regulation of synaptic transmission is required for a late phase of associative odor memory.
Chen K, Richlitzki A, Featherstone DE, Schwärzel M, Richmond JE.
[Abstract]

The Drosophila javelin gene encodes a novel actin-associated protein required for actin assembly in the bristle.
Shapira S, Bakhrat A, Bitan A, Abdu U.
Genetic modulation of Rpd3 expression impairs long-term courtship memory in Drosophila.
Fitzsimons HL, Scott MJ.

Expression of human FUS protein in Drosophila leads to progressive neurodegeneration.

Functional dissection of Odorant binding protein genes in Drosophila melanogaster.
Swarup S, Williams Ti, Anholt RR.

In situ mechanical analysis of myofibrillar perturbation and aging on soft, bilayered Drosophila myocardium.
Kaushik G, Fuhrmann A, Cammarato A, Engler AJ.

The poly(A) polymerase GLD2 is required for spermatogenesis in Drosophila melanogaster.
Sartain CV, Cui J, Meisel RP, Wolfner MF.

PAPI, a novel TUDOR-domain protein, complexes with AGO3, ME31B and TRAL in the nuage to silence transposition.
Liu L, Qi H, Wang J, Lin H.
Development. 2011 May;138(9):1863-73.

Sds22/PP1 links epithelial integrity and tumor suppression via regulation of myosin II and JNK signaling.
Jiang Y, Scott KL, Kwak SJ, Chen R, Mardon G.

The Drosophila Nol12 homologue viriato is a dMyc target that regulates nucleolar architecture and is required for dMyc-stimulated cell growth.
Marinho J, Casares F, Pereira PS.
Mechanism of the piRNA-mediated silencing of Drosophila telomeric retrotransposons.
Shpiz S, Olovnikov I, Sergeeva A, Lavrov S, Abramov Y, Savitsky M, Kalmykova A.
Nucleic Acids Res. 2011 Nov 1;39(20):8703-11

Dopamine signalling in mushroom bodies regulates temperature-preference behaviour in Drosophila.
Bang S, Hyun S, Hong ST, Kang J, Jeong K, Park JJ, Choe J, Chung J.

Role for a Cindr-Arf6 axis in patterning emerging epithelia.
Johnson RI, Sedgwick A, D'Souza-Schorey C, Cagan RL.

The ISWI chromatin remodeler organizes the hsrω ncRNA-containing omega speckle nuclear compartments.
Onorati MC, Lazzaro S, Mallik M, Ingrassia AM, Carreca AP, Singh AK, Chaturvedi DP, Lakhotia SC, Corona DF.

PS integrins and laminins: key regulators of cell migration during Drosophila embryogenesis.
Urbano JM, Domínguez-Giménez P, Estrada B, Martín-Bermudo MD.

Drosophila TIEG is a modulator of different signalling pathways involved in wing patterning and cell proliferation.
Rodriguez I.

NEMO/NLK phosphorylates PERIOD to initiate a time-delay phosphorylation circuit that sets circadian clock speed.
Chiu JC, Ko HW, Edery I.
Cell. 2011 Apr 29;145(3):357-70.
RNA silencing in Monterey.
Rissland OS, Lai EC.
[Abstract]

The Drosophila L1CAM homolog Neuroglian signals through distinct pathways to control different aspects of mushroom body axon development.
[Abstract]

Innexin2 gap junctions in somatic support cells are required for cyst formation and for egg chamber formation in Drosophila.
[Abstract]

Physiological apoptosis of polar cells during Drosophila oogenesis is mediated by Hid-dependent regulation of Diap1.
Khammari A, Agnès F, Gandille P, Pret AM.
[Abstract]

Apical deficiency triggers JNK-dependent apoptosis in the embryonic epidermis of Drosophila.
Kolahgar G, Bardet PL, Langton PF, Alexandre C, Vincent JP.
[Abstract]

Autophagy in Drosophila ovaries is induced by starvation and is required for oogenesis.
Barth JM, Szabad J, Hafen E, Köhler K.
[Abstract]

[Analysis of blastomogenic activity of mammal carcinogens in Drosophila using the wts(P4) allele and RNA interference-induced p53 silencing].
Kirsanov KI, Lesovaya EA, Sidorov RA, Belitskii GA, Yakubovskaya MG.
[Abstract]

Spatial and temporal requirement of defective proventriculus activity during Drosophila midgut development.
[Abstract]

The receptor tyrosine kinase Alk controls neurofibromin functions in Drosophila growth and learning.
[Abstract]

A conserved F box regulatory complex controls proteasome activity in Drosophila.
[Abstract]

Drosophila melanogaster as a model host for the study of microbial pathogenicity and the discovery of novel antimicrobial compounds.
[Abstract]

Mitochondrial fusion is regulated by Reaper to modulate Drosophila programmed cell death.
[Abstract]

The hector G-protein coupled receptor is required in a subset of fruitless neurons for male courtship behavior.
[Abstract]

Secreted semaphorins from degenerating larval ORN axons direct adult projection neuron dendrite targeting.
[Abstract]

Go α is involved in sugar perception in Drosophila.
[Abstract]
BMP signaling dynamics in the follicle cells of multiple Drosophila species.
Niepielko MG, Hernáiz-Hernández Y, Yakoby N.
[Abstract]

FOXO regulates organ-specific phenotypic plasticity in Drosophila.
Tang HY, Smith-Caldas MS, Driscoll MV, Salhador S, Shingleton AW.
[Abstract]

Ecdysteroids affect Drosophila ovarian stem cell niche formation and early germline differentiation.
König A, Yatsenko AS, Weiss M, Shcherbata HR.
[Abstract]

Drosophila Met and Gce are partially redundant in transducing juvenile hormone action.
[Abstract]

A new Prospero and microRNA-279 pathway restricts CO2 receptor neuron formation.
Hartl M, Loschek LF, Stephan D, Siju KP, Knappmeyer C, Kadow IC.
[Abstract]

UVRAG is required for organ rotation by regulating Notch endocytosis in Drosophila.
[Abstract]

A potential role for the clathrin adaptor GGA in Drosophila spermatogenesis.
Hirst J, Carmichael J.
[Abstract]

Orthodenticle is necessary for survival of a cluster of clonally related dopaminergic neurons in the Drosophila larval and adult brain.
Blanco J, Pandey R, Wasser M, Udolph G.
Neural Dev. 2011 Oct 14;6:34.
[Abstract]
The ISWI chromatin remodeler organizes the hsrω ncRNA-containing omega speckle nuclear compartments.
Onorati MC, Lazzaro S, Mallik M, Ingrassia AM, Carreca AP, Singh AK, Chaturvedi DP, Lakhotia SC, Corona DF.
[Abstract]

Analysis of protein dynamics within the septate junction reveals a highly stable core protein complex that does not include the basolateral polarity protein Discs large.
Oshima K, Fehon RG.
[Abstract]

Sequential phosphorylation of smoothened transduces graded hedgehog signaling.
Su Y, Ospina JK, Zhang J, Michelson AP, Schoen AM, Zhu AJ.
[Abstract]

NFAT regulates pre-synaptic development and activity-dependent plasticity in Drosophila.
Freeman A, Franciscovich A, Bowers M, Sandstrom DJ, Sanyal S.
[Abstract]

Transcriptional networks for alcohol sensitivity in Drosophila melanogaster.
Morozova TV, Mackay TF, Anholt RR.
[Abstract]

insomniac and Cullin-3 regulate sleep and wakefulness in Drosophila.
Stavropoulos N, Young MW.
[Abstract]

Perturbation of the Akt/Gsk3-β signalling pathway is common to Drosophila expressing expanded untranslated CAG, CUG and AUUCU repeat RNAs.
vан Eyk CL, O’Keefe LV, Lawlor KT, Samaraweera SE, McLeod CJ, Price GR, Venter DJ, Richards RI.
[Abstract]

A tobacco homolog of DCN1 is involved in pollen development and embryogenesis.
Drosophila, genetic screens, and cardiac function.
Wolf MJ, Rockman HA.
Circ Res. 2011 Sep 16;109(7):794-806

Rho GTPase controls Drosophila salivary gland lumen size through regulation of the actin cytoskeleton and Moesin.
Xu N, Bagumian G, Galiano M, Myat MM.

The bicoid stability factor controls polyadenylation and expression of specific mitochondrial mRNAs in Drosophila melanogaster.

Coordinated expression of cell death genes regulates neuroblast apoptosis.

Loss of Drosophila melanogaster p21-activated kinase 3 suppresses defects in synapse structure and function caused by spastin mutations.
Ozdowski EF, Gayle S, Bao H, Zhang B, Sherwood NT.

Integrins are necessary for the development and maintenance of the glial layers in the Drosophila peripheral nerve.
Xie X, Auld VJ.

dp53 Restrains ectopic neural stem cell formation in the Drosophila brain in a non-apoptotic mechanism involving Archipelago and cyclin E.
Ouyang Y, Song Y, Lu B.
EGFR/Ras/MAPK signaling mediates adult midgut epithelial homeostasis and regeneration in Drosophila.
Jiang H, Grenley MO, Bravo MJ, Blumhagen RZ, Edgar BA.
Cell Stem Cell. 2011 Jan 7;8(1):84-95

Interaction between differentiating cell- and niche-derived signals in hematopoietic progenitor maintenance.
Mondal BC, Mukherjee T, Mandal L, Evans CJ, Sinenko SA, Martinez-Agosto JA, Banerjee U.

Drosophila javelin-like encodes a novel microtubule-associated protein and is required for mRNA localization during oogenesis.
Dubin-Bar D, Bitan A, Bakhrat A, Amsalem S, Abdu U.

Asymmetric cell division and Notch signaling specify dopaminergic neurons in Drosophila.
Tio M, Toh J, Fang W, Blanco J, Udolph G.

Negative modulation of bone morphogenetic protein signaling by Dullard during wing vein formation in Drosophila.

Isoform-specific regulation of a steroid hormone nuclear receptor by an E3 ubiquitin ligase in Drosophila melanogaster.
Gradilla AC, Mansilla A, Ferrús A.

Reliable Drosophila body fat quantification by a coupled colorimetric assay.
Hildebrandt A, Bickmeyer I, Kühnlein RP.

Imaging analysis of clock neurons reveals light buffers the wake-promoting effect of dopamine.

[Abstract]

**MK2-dependent p38b signalling protects Drosophila hindgut enterocytes against JNK-induced apoptosis under chronic stress.**

[Abstract]

**Phosphoinositide regulation of integrin trafficking required for muscle attachment and maintenance.**

[Abstract]

[Abstract]

**arouser reveals a role for synapse number in the regulation of ethanol sensitivity.**

[Abstract]

**The DOCK protein sponge binds to ELMO and functions in Drosophila embryonic CNS development.**

[Abstract]
The actin nucleator WASp is required for myoblast fusion during adult Drosophila myogenesis.
Mukherjee P, Gildor B, Shilo BZ, VijayRaghavan K, Schejter ED.
[Abstract]

Ral GTPase promotes asymmetric Notch activation in the Drosophila eye in response to Frizzled/PCP signaling by repressing ligand-independent receptor activation.
Cho B, Fischer JA.
[Abstract]

Toll-8/Tollo negatively regulates antimicrobial response in the Drosophila respiratory epithelium.
Akhouayri I, Turc C, Royet J, Charroux B.
[Abstract]

Regulation of cell growth by Notch signaling and its differential requirement in normal vs. tumor-forming stem cells in Drosophila.
Song Y, Lu B.
[Abstract]

Hole-in-one mutant phenotypes link EGFR/ERK signaling to epithelial tissue repair in Drosophila.
Geiger JA, Carvalho L, Campos I, Santos AC, Jacinto A.
[Abstract]

Human disease models in Drosophila melanogaster and the role of the fly in therapeutic drug discovery.
Pandey UB, Nichols CD.
[Abstract]

Genetics. 2011 May;188(1):105-25.
[Abstract]

New dystrophin/dystroglycan interactors control neuron behavior in Drosophila eye.
Marrone AK, Kucherenko MM, Rishko VM, Shcherbata HR.
PINK1 and Parkin target Miro for phosphorylation and degradation to arrest mitochondrial motility.

Regulation of ocellar specification and size by twin of eyeless and homothorax.
Brockmann A, Domínguez-Cejudo MA, Amore G, Casares F.

The WASp-based actin polymerization machinery is required in somatic support cells for spermatid maturation and release.
Rotkopf S, Hamberg Y, Aigaki T, Snapper SB, Shilo BZ, Schejter ED.

Dynamin- and Rab5-dependent endocytosis is required to prevent Drosophila photoreceptor degeneration.
Pinal N, Pichaud F.
J Cell Sci. 2011 May 1;124(Pt 9):1564-70.

Biophysical mechanisms underlying olfactory receptor neuron dynamics.
Nagel KI, Wilson RI.

Self-maintained escort cells form a germline stem cell differentiation niche.
Kirilly D, Wang S, Xie T.

Dynein light chain 1 functions in somatic cyst cells regulate spermatogonial divisions in Drosophila.
Joti P, Ghosh-Roy A, Ray K.

BAX inhibitor-1 regulates autophagy by controlling the IRE1α branch of the unfolded protein response.
EMBO J. 2011 Sep 16;30(21):4465-78.
[Abstract]

**Drosophila Ndfip is a novel regulator of Notch signaling.**
Dalton HE, Denton D, Foot NJ, Ho K, Mills K, Brou C, Kumar S.
[Abstract]

**Anaplastic lymphoma kinase spares organ growth during nutrient restriction in Drosophila.**
Cheng LY, Bailey AP, Leevers SJ, Ragan TJ, Driscoll PC, Gould AP.
[Abstract]

**Drosophila GGA model: an ultimate gateway to GGA analysis.**
[Abstract]

**Homeostasis of the Drosophila adult retina by actin-capping protein and the Hippo pathway.**
Brãs-Pereira C, Zhang T, Pignon F, Janody F.
[Abstract]

**Actin-Capping Protein and the Hippo pathway regulate F-actin and tissue growth in Drosophila.**
[Abstract]
