# Nanotopography and Morphology along Metal-Polymer Interfaces

## Proefschrift

ter verkrijging van de graad van doctor aan de  
 Rijksuniversiteit Groningen  
 op gezag van de  
 rector magnificus prof. dr. E. Sterken  
 en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op  
 vrijdag 19 december 2014 om 14:30 uur

**Cover:** Scanning Electron Microscopy image of polymer-steel laminate cross-sectioned by FIB and strained in tension.

The research presented in this thesis was carried out under project number M63.7.09343b in the framework of the Research Program of Materials innovation institute (M2i) in the Netherlands ([www.m2i.nl](http://www.m2i.nl)).

It was performed in the Materials Science group of the Zernike Institute for Advanced Materials at the University of Groningen, the Netherlands.
