

# *Skeletal Rearrangements In Natural Product Synthesis*

## General Notes/Strategies:

Can be a very atom economical method for the synthesis of complex natural product structures.

Basically, set up a system, add a “trigger”, allow the system to do the rest of the work.

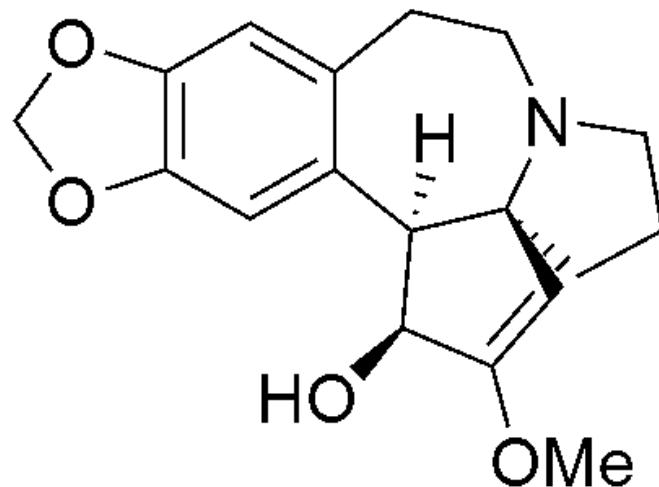

Ideally, the precursor is easy to synthesize in fewer steps than making the product in another method.

Editorial Statement: The hard part is “seeing it”.

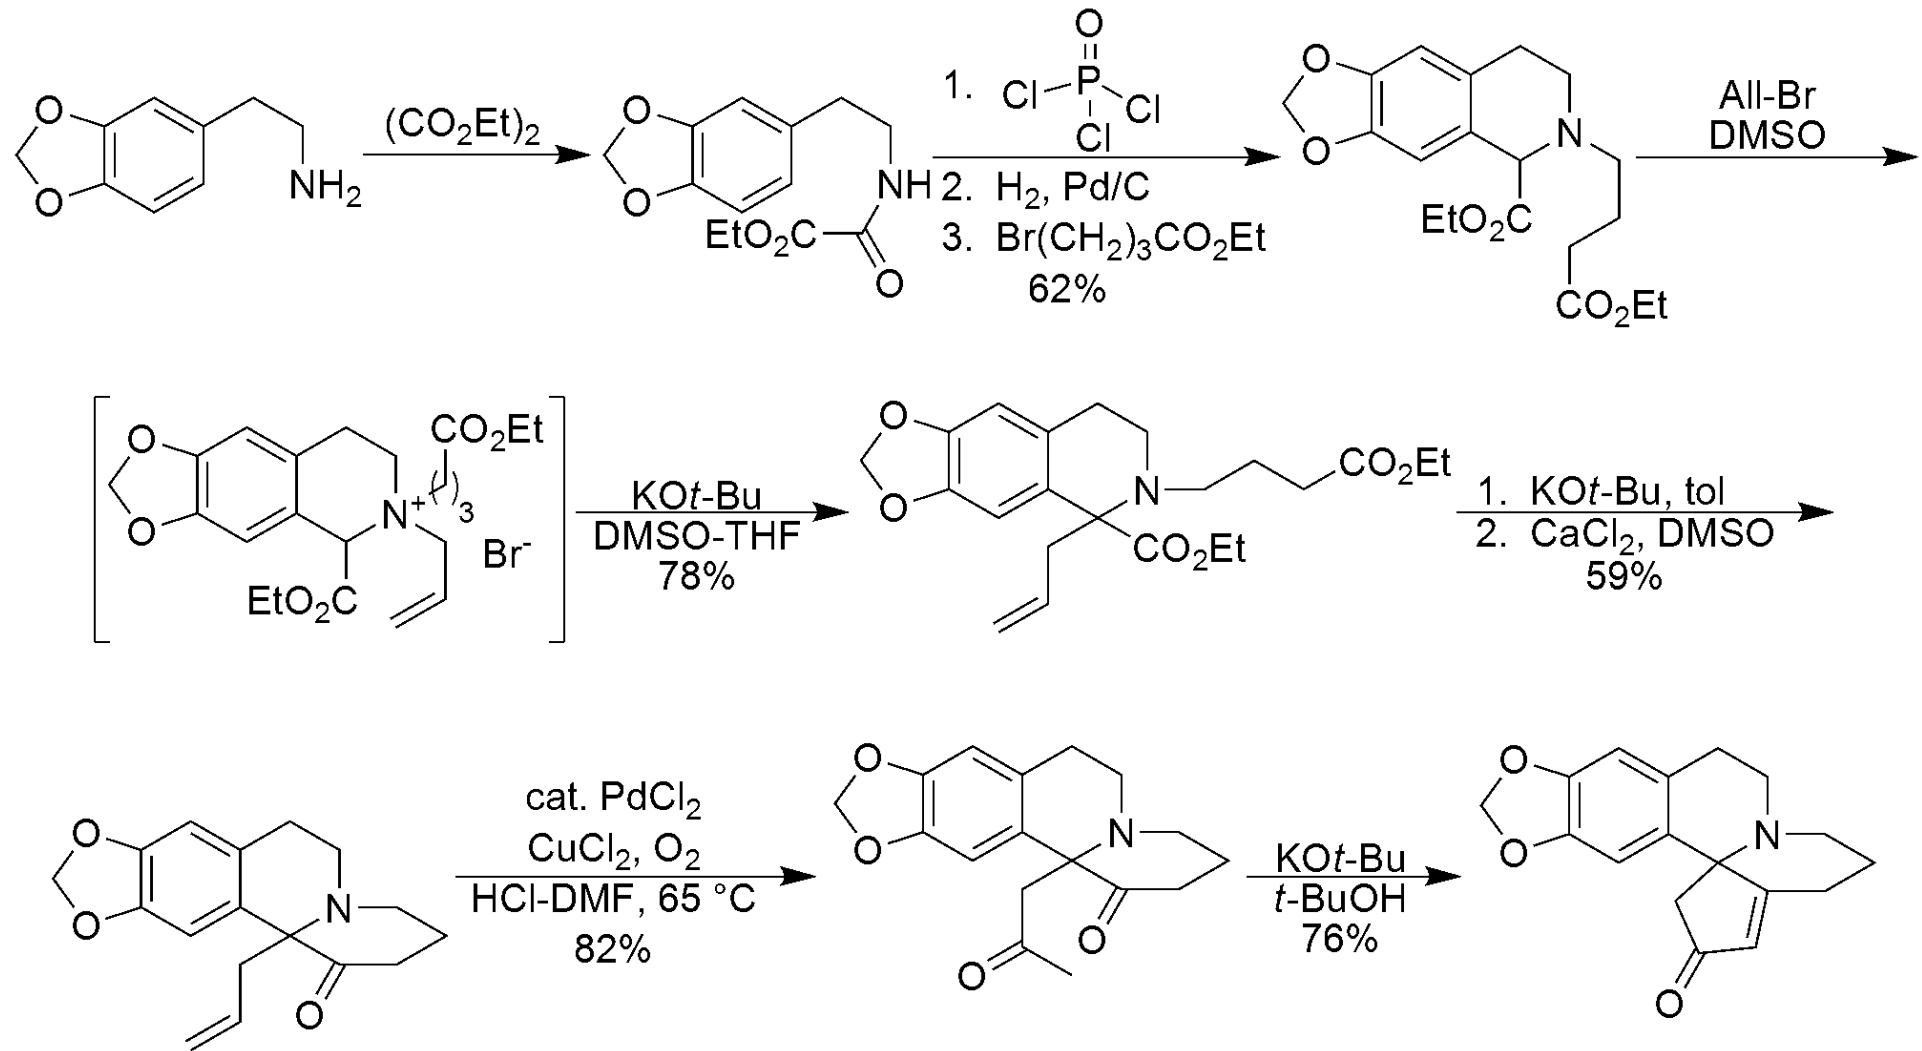

# *Synthesis of Cephalotaxine*

Li, W-D.Z.;Wang, Y.-Q. *Org. Lett.* **2003**, 5, 2931-2934

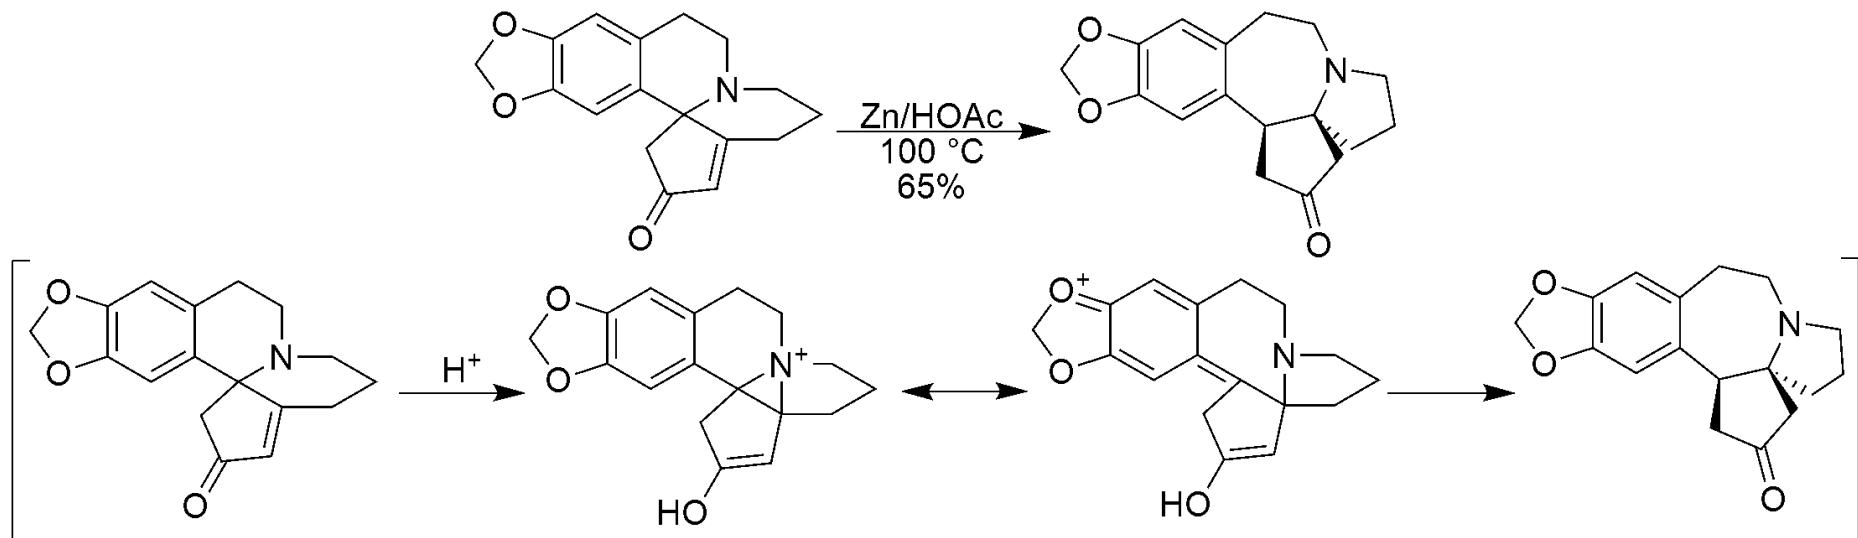

- + Parent member of the *Cephalotaxus* alkaloids
- + Ester derivatives (harringtonine and homoharringtonine) found to be effective at treating leukemia and are in clinical trials.
- + Harringtonine also potent against strains of malaria parasite.

# *Synthesis of Strychnine*

Knight, S. D.; Overman, L. E.; Pairaudeau, G. *J. Am. Chem. Soc.* **1995**, *117*, 5776-5788.

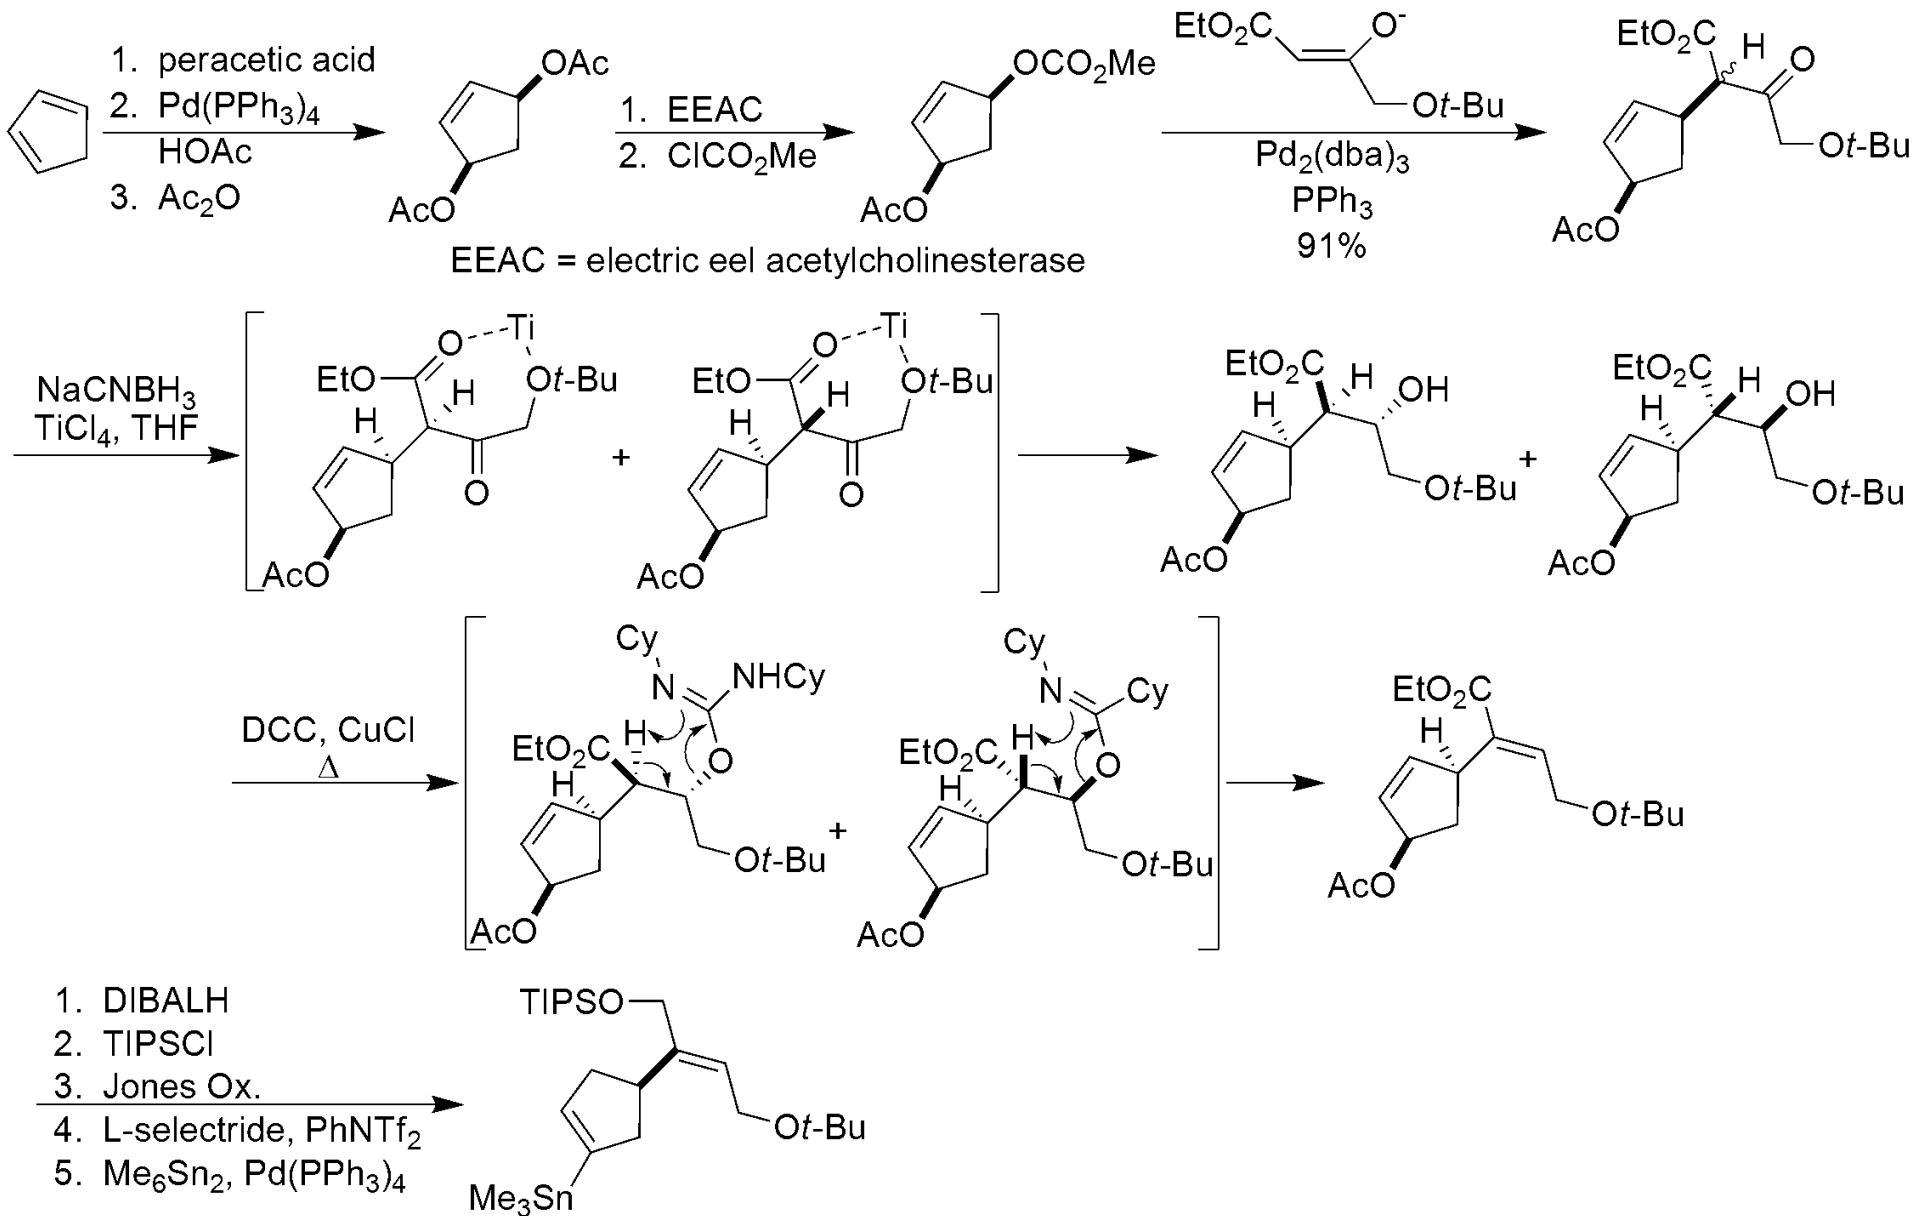

- + Isolated (along with brucine) from the seeds of *Strychnos nux vomica*

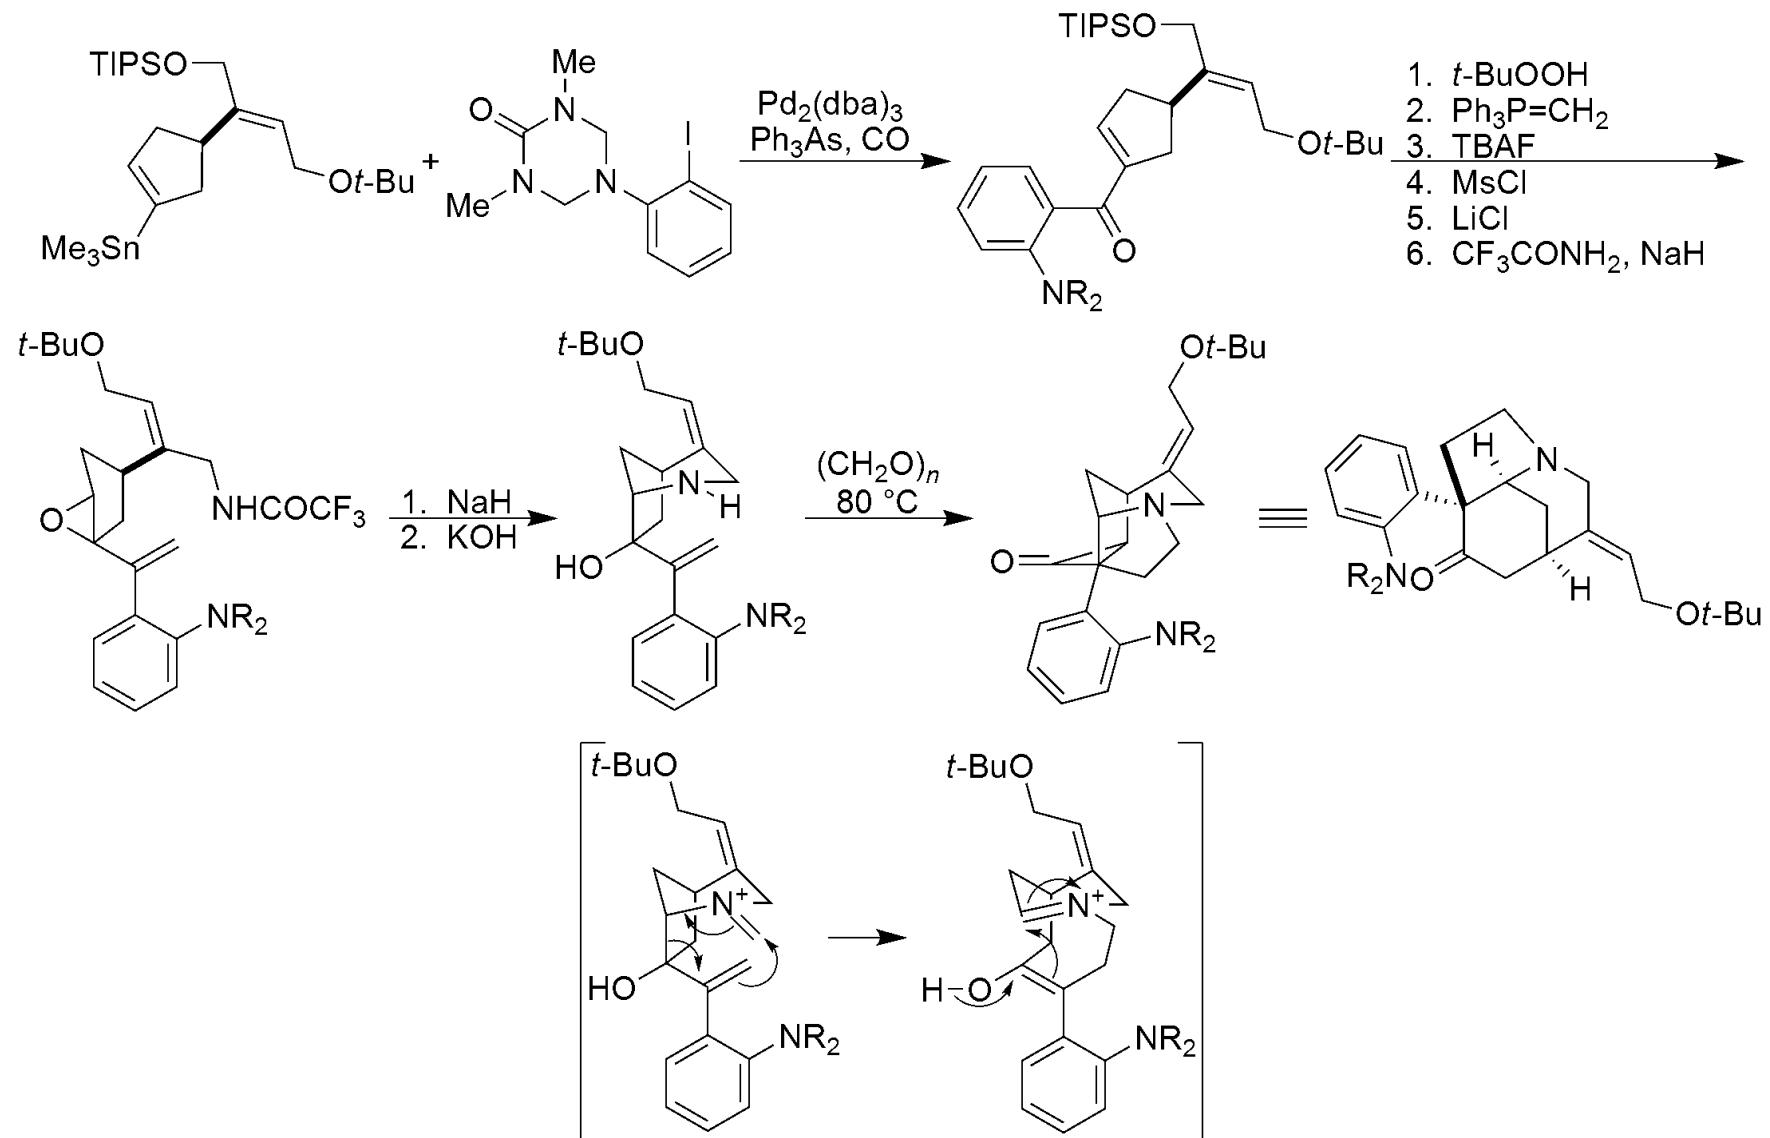

*Strychnos* = “death or deadly”, *nux* = “nut”, *vomica* = “vomit”

- + CAUTION - Very commonly called “Nux vomica” when sold online as an “herbal remedy”
